List of Exhibits

Standard I: Program Quality: Mission and Governance

Exhibit I.01: Undergraduate and Graduate Student Handbooks

Exhibit I.02: Minutes of May 18, 2018 Faculty meeting

Exhibit I.03: 2008 AACN's Essentials of Baccalaureate Education for Professional Nursing Practice

Exhibit I.04: 2011 AACN's Essentials for Master's Education in Nursing

Exhibit I.05: Sample Diplomas and Transcripts of MSN graduates of the Adult Gerontology CNS Track

Exhibit I.06: Minutes of the May 15 and 16, 2017 Faculty meeting

Exhibit I.07: Minutes of the June 19, 2013 Graduate Faculty Retreat

Exhibit I.08: Student and Alumni Survey Reports

Exhibit I.09: Minutes of the Task force on Faculty Workload

Exhibit I.10: Sample Orientation of Clinical Preceptors about their Role in Teaching

Exhibit I.11: Preceptor Education workshop

Exhibit I.12: Clinical Evaluation Request for a MSN Student from a Physician Preceptor

Exhibit I.13: MSN Program Revision Proposal 2015

Exhibit I.14: Sample Town Hall Meeting Minutes with students

Exhibit I.15: Minutes of Senate Meeting February 26, 2021, where the USFC Amended Bylaws were approved

Exhibit I.16: HSON recruitment material

Exhibit I.17: Policy on the Development and Revision of Bylaws, Policies, Procedures and Manuals

Exhibit I.18: Student Code of Conduct

Exhibit I.19: Grievance Policy and Procedures

Exhibit I.20: HSON Annual Reports

Standard II: Program Quality: Institutional Commitment and Resources

Exhibit II.01. HSON budget

Exhibit II.02: CV of Dean Farhood

Exhibit II.03: Student Enrollment Data

Exhibit II.04: Adjunct Faculty and Preceptors 2018-2020

Exhibit II.05: Preceptor Contract

Exhibit II.06: Contribution of PhD Students as Preceptors in NURS 307

Standard III: Program Quality: Curriculum and Teaching-Learning Practices

Exhibit III.01. MSN Course Syllabi for NURS 501, 507, 520, 525

Exhibit III.02: Academic and Curriculum Committee meeting minutes of 16.12.2019.

Exhibit III.03: Academic and Curriculum Committee Meeting Minutes of 25.02.2019

Exhibit III.04: Academic and Curriculum Committee Meeting Minutes of 17.02.2020

Exhibit III.05. MSN course syllabi for NURS 503, NURS 505A, NURS 505B and NURS 506

Exhibit III.06. MSN course syllabi for NURS 508 and NURS 598

Exhibit III.07. MSN Course Syllabi for NURS 512, NURS 516, NURS 517, NURS 518 and NURS 519

Exhibit III.08. Substantive change notification to CCNE about the MSN program Revision and Related Communication

Exhibit III.09. Examples of Undergraduate Course syllabi

Exhibit III. 10. Reflective writing course assignment

Exhibit III.11. Student Involvement in Community Activities

Exhibit III.12. Sample clinical rotation

Exhibit III.13 Summative Evaluation Forms

Exhibit III.14. Student Contract

Exhibit III.15.Sample Weekly Anecdotes

Exhibit III.16. Sample Mid Semester Evaluation

Exhibit III.17 Graded Graduate Student Papers

Standard IV: Program Effectiveness: Assessment and Achievement of Program Outcomes

Exhibit IV.01 Sample Minutes of Graduate Studies Committee meetings where achievement of program outcomes are discussed

Exhibit IV.02 Sample Statements from the Ministry of Higher Education confirming the BSN graduates' passing of the colloquium exam.

Exhibit IV.03: Certificate of a CNS in Adult Gerontology

Exhibit IV.04: Sample FMIS Generated Performance Appraisal Report

Exhibit IV.05. Sample Faculty assignment

Exhibit IV.06 Faculty CVs

Exhibit IV.07 Schedule of the Order of Nurses in Lebanon's 2nd international conference titled "Nurses Leading the Vision for Global Health"

Exhibit IV.08. Faculty Retreat Report October 2019

Dean's message

Welcome to the Rafic Hariri Hariri School of Nursing (HSON). We are delighted that you have chosen to study nursing at AUB and look forward to meeting each one of you. This is an exciting time for nursing—both at AUB and throughout the world.
In the field of nursing generally, nurses are taking on new and greater responsibilities. Although taking care of patients is still our primary responsibility, we are also playing a role in setting health care policy at the national, regional, and international levels and researching important health care issues.

Here at AUB, we celebrated our 100th anniversary in 2005 and our 110th anniversary in 2015. We have introduced new programs and are constantly updating and revising our curriculum. Our graduates are in great demand and they are occupying leadership positions in different countries in the world. In 2007 the BSN and MSN programs were granted unconditional accreditation by the Commission on Collegiate Nursing Education (CCNE) in the USA for five years and in 2012 the programs were reaccredited for a period of 10 years. AUB Hariri School of Nursing is the first school to be accredited by CCNE outside the USA. In 2008 the HSON received a $10M gift to endow the school and the building and in 2009 the Rafic Hariri School of Nursing building was inaugurated. The building houses faculty offices, classrooms, an auditorium, a computer lab, skills and simulation lab, a research center, and student facilities.

In 2015, HSON won three major regional awards; HSON received the best institution award, Dr. Huda Huijer the distinguished researcher award, and an MSN graduate the best thesis award. The Chi Iota Honor Society Chapter, the first in the region, was formally chartered by Sigma Theta Tau International (STTI) in 2015 and 131 members were inducted into this prestigious honor society. In 2017, the PhD in Nursing Science program was launched in 2018-19. In 2018, AUB granted HSON independent Faculty status and appointed Dr. Huijer as founding dean of the school. We continue to be proud of these accomplishments and we look forward to working with you to celebrate these achievements.

We hope this handbook will be a useful guide for you especially during the first couple of weeks when everything is so unfamiliar. If, however, you are lost or need help, please come and find us. We are eager to do whatever we can to make this a positive and rewarding experience for you.
We also welcome any comments or suggestions you may have on how we might change and improve on this handbook in order to make it more helpful for future Hariri School of Nursing students.

Good luck!
Laila F. Farhood, Ph.D., C.N.S

Preface

This handbook has been prepared for graduate students in order to provide detailed information about the Master of Science in Nursing Program at the American University of Beirut. Guidelines and policy statements are given to assist in clarifying the process from entry to the program through graduation.

The MSN program in the Hariri School of Nursing was launched Fall 2003-2004. The curriculum with emphasis on Advanced Nursing Practice provides educational opportunities for nurses seeking further specialization.

The faculty and administration of the Hariri School of Nursing hope that the educational process at the American university of Beirut will be a rewarding and challenging experience for each student. We pledge ourselves to assist students in the pursuit of their professional and educational goals.

In addition to the policies found here that are specific to the Graduate Program at the Hariri School of Nursing, the student should obtain and keep a copy of the AUB Graduate Catalogue, which contains policies and procedures that apply to all graduate programs in the University.

The American University of Beirut

The American University of Beirut (AUB) is a private, non-sectarian institution of higher learning, founded in 1866. It functions under a charter from the State of New York and is administered by a private, autonomous Board of Trustees.

The University has seven faculties: Arts and Sciences, Medicine, the Rafic Hariri School of Nursing,Maroun Semaan Faculty of Engineering and Architecture, the Faculty of Agriculture and Food Sciences, the Faculty of Health Sciences and the Olayan School of Business. At present, AUB offers programs leading to both bachelor's, master's degrees and a number of PhD programs. The language of instruction is English.

AUB is a teaching-centered research university, where excellence in teaching and research go hand-in-hand. Its mission is to enhance education, primarily the education of the peoples of the Middle East, to serve society through its educational functions, and to participate in the advancement of knowledge. AUB bases its educational perspective and methods, and its academic organization on the American model of higher education.

The university emphasizes scholarship that enables students to think for themselves, stresses academic excellence, and promotes high principles of character. It aims to produce men and women who are not only technically competent in their professional fields but also life-long learners who have breadth of vision, a sense of civic and moral responsibility, and devotion to the fundamental values of human life. The University believes in and encourages freedom of thought and expression. It expects, however, that this freedom will be enjoyed in a spirit of integrity and with full sense of responsibility.

General Information about the MSN Program

The Hariri School of Nursing at AUB offers the Degree of *Master of Science in Nursing* (MSN) with emphasis on Advanced Nursing Practice. Four tracks are available: Adult-Gerontology Clinical Nurse Specialist, Psychiatric Mental Health Clinical Nurse Specialist, Community and Public Health Nursing, and Nursing Administration and Management. This MSN program is designed to meet the health challenges of the 21st century in Lebanon and the region, and prepare students for continued studies towards PhD degrees. The clinical tracks prepare graduates as clinical nurse specialists.

The Hariri School of Nursing faculty members are renowned for their research, clinical expertise, innovative teaching strategies, and contribution to professional practice at the national level.

Mission Statement

The mission of the Hariri School of Nursing is to promote and maintain the highest educational standards of excellence, integrity, and professionalism in nursing, following the American model of nursing education and practice. The school aims to provide learning opportunities that will enable students to develop into competent nurses who respect cultural diversity while coordinating and delivering high–quality, compassionate nursing care in Lebanon and beyond, guided by ethical principles. The faculty believes education is an interactive process between faculty and students with both taking responsibility for active learning. The baccalaureate program, drawn primarily from the humanities, sciences, and caring disciplines, focuses on the use of nursing theory and research as a basis for practice. The master's program focuses on preparing nurses for advanced nursing practice roles. It is based on the use and generation of research-based knowledge to guide practice. The PhD program in Nursing Science aims to provide rigorous training for research careers in nursing and healthcare. The program is intended to produce research scientists who will make significant and original contributions to nursing practice, health promotion, health maintenance, population health and health care delivery. Nursing students at AUB learn to think critically, develop professional attitudes and leadership skills, and appreciate the value of life-long learning and freedom of speech.

Philosophy

The Master of Science in Nursing Program is consistent with the philosophy of the American University of Beirut and the mission of the Hariri School of Nursing, and builds upon the knowledge and competencies that characterize the undergraduate program. Graduate education denotes the critical appraisal of concepts and theories basic to the Nursing discipline. The unifying focus in graduate education is specialized and research-directed

nursing practice. Graduate education promotes the process of inquiry for the expansion and testing of knowledge; and fosters creativity, critical thinking, professional development, research**,** and leadership skills.

Learning Outcomes

The program provides students with a thorough understanding of the theoretical basis of practice and also incorporates managerial, administrative, research and educational skills.

Specifically, the MSN program will prepare nurses who:

1. Integrate theory and research in nursing and related disciplines as basis for advanced nursing practice and role development.
2. Participate in conducting research within collaborative teams to improve care outcomes and support policy changes
3. Deliver advanced practice nursing based on critical thinking, research evidence, and advanced knowledge and skills in specialized area of nursing.
4. Demonstrate advanced clinical and data driven decision-making across health care settings.
5. Analyze the impact of socio-cultural, economic, ethical, legal and political issues on nursing practice, health promotion strategies and health care delivery.
6. Assume leadership roles in education and management, utilizing inter-and intra-disciplinary approaches and systems thinking.
7. Analyze current and emerging technologies to optimize patient safety, cost-effective care, and quality and health outcomes'.

Admission to the MSN program

A student is eligible for consideration for admission to the MSN program if s/he fulfills AUB admission requirements for graduate studies. The criteria for admission to the MSN program are:

1. Meeting all the university admission requirements to graduate studies.
2. Having a BSN degree or its equivalent from an accredited/recognized institution.
3. Having a cumulative undergraduate average of at least 75, with an undergraduate average of at least 80 in the major Nursing.
4. Demonstrating evidence of knowledge and competence in physical assessment skills (for the clinical tracks).
5. Satisfactory scores on the English Entrance Exam or Test of English as a Foreign Language, as per AUB requirements for graduate studies.
6. License to practice nursing from country of residence.
7. One year work experience in nursing.

Categories of Admission

Applicants for graduate study may be considered for admission in one of the following categories:

Graduate Regular

A candidate qualifies for this category if s/he holds a bachelor's degree from AUB or an equivalent degree from another recognized institution with an undergraduate cumulative average of at least 75 and an average of at least 80 or its equivalent in nursing.

Graduate on probation

Candidates who fail to meet any of the admission requirements but who, in the opinion of the faculty, demonstrate potential for graduate study, are admitted as 'graduates on probation.' Students with a cumulative undergraduate average of at least 75 but less than 80 in the major field (nursing) may be conditionally admitted as graduate student on probation. These students should score 80 or above in the first nine graduate credits in order to be transferred from special status to regular status.

Readiness for University Studies in English (RUSE)

Upon admission to AUB and prior to registration, students must demonstrate a level of English proficiency consistent with the demands of a program carried out almost exclusively in the English language. This should be done as early as possible (in general, no later than 1 month prior to the start of the semester) by submitting official test scores for (at least) one of the following tests listed in the below RUSE table for undergraduate or graduate admissions. Please note that some applicants might be exempted from the RUSE requirementssuch as graduates of AUB and those students whose native language is English.

Graduate RUSE: Applicable to students joining AUB at the graduate level

Exam **English Course Placement**	**NEW AUB EEE (After Jan 2017)**	**TOEFL (PBT)**	**TOEFL (IBT)**	**IELTS (Academic)**	**GRE (Verbal)**	**GMAT (Verbal)**
Exam Validity	***1year***	***2years***	***2years***	***2years***	***5years***	***5years***
No English courses	>=40	>= 583	>= 97	7.0	>= 147	>= 25
English 300	32-39	573-582	88-96			
Intensive English 100A/100B (If faculty approves)	25-31	490-570	57-87			
Summer Preparatory English Program (UPGR 001)						

Transfer of Credits

Transfer of Credits from One Master's Degree to Another Graduate courses taken at AUB (or at other recognized institutions), in which the applicant earned an equivalent grade of 80 (B+) or above, may be transferred to another master's degree at AUB. No more than 9 credits are transferable provided they are not credits earned by an internship, thesis or practicum, and degree minimum residency requirement is maintained. For master's degrees with more than 33 credits, the maximum number of transferable credits can be up to 12 credits. Approval by the department or the academic unit concerned and the School Graduate Studies Committee is required for all

transfers. Normally, credits counted toward another graduate degree at AUB or another institution cannot be transferred if they have already been used to satisfy requirements for another awarded graduate degree.

Graduate Council

The Graduate Council (GC) reports to the Provost of the University and plays a vital role in implementing the rules and regulations governing graduate work uniformly across the University, in accordance with policies approved by the Board of Graduate Studies (BGS) and the Senate, and as recommended by the faculties and schools. The Graduate Council facilitates and coordinates graduate education and follows up on the implementation of graduate policies and deadlines. The Graduate Council works closely with the BGS and Faculty Graduate Studies Committees to provide mechanisms for the quality control of all aspects of graduate education. In cooperation with faculty, students, and staff, the Graduate Council undertakes preparatory steps and coordinates graduate recruitment programs to ensure a selection process from a highly qualified pool of student applicants; provides information about admissions to all graduate programs; administers graduate standards of scholarship and policy; and encourages the development and success of students through workshops, training activities, counseling, and initiatives that promote timely degree completion. The Graduate Council also administers AUB policies concerning graduate assistantship appointments.

Registration

Academic Year

The academic year at AUB includes two semesters, fall, and spring, followed by a summer session. Each semester has a reading period and a final exam week. For the exact dates, see the AUB Calendar on the Registrar's website.

Course Registration

New students register on-line via the Internet during August/September at a date indicated at the University Registrar for the fall semester of an academic year.

Check details of on-line registration under Course Registration for New Students and Consult the Registration Guide available on the Office of the Registrar's website.

Continuing students will register before the end of each semester for the upcoming academic semester. The registrar announces all registration dates.

Deferred Registration

Graduate students who are offered admission in the Fall semester and who do not register for that semester may be eligible for admission to the following Fall semester of the, pending availability of places. A petition should be submitted to the Office of Admissions.

Late Registration

Students unable, for some unforeseen reason, to register at the scheduled time may attempt late registration up to five working days after the announced deadline. A late registration fee of LL150, 000 for students will be charged.

Drop and Add

After the start of classes, at a date indicated in the University Registrar, students may make changes in their schedules through a process known as Drop and Add. After obtaining the approval of their advisers, students may make changes in their courses on the web according

to a pre-announced schedule. They may need to settle their accounts at the Office of the Comptroller.

Fees and Expenses

The American University of Beirut is a non-profit institution. The charge to students is kept at the minimum consistent with the provision of high quality instruction and adequate resources. The University reserves the right to change any or all fees at any time without prior notice. Such changes will be applicable to students currently registered in the university as well as to new students.

Students will not be permitted to enter classes at the beginning of the term until their fees are paid or special arrangements have been made with the university comptroller. All fees are quoted in Lebanese pounds and US dollars.

Payment of Fees

Each AUB student must pay all his/her tuition fees and other charges levied.

1. Students who demonstrate financial need may make formal application for deferred payment arrangements for tuition fees only to the Office of the Comptroller according to the academic calendar for the first and second semesters. No applications for deferrals will be accepted thereafter. Deferred payments are not a right and will only be agreed to under specific and special circumstances. Students who arrange for deferred payments are still required to complete all registration formalities within the set deadlines. Deferred payment arrangements are not permitted for the summer session.
2. A graduate student who applies for deferred payment must pay at least 50% of the net amount of tuition due. All other charges must be paid in full with no deferrals. A student must pay a deferred payment application fee of $33, whether approved or not.
3. Should the student's application be approved, the student must pay the balance, plus a deferred application fee of $33, together with the late payment fee, if applicable. All the above arrangements must be concluded by the announced deadlines.
4. Every student granted deferred payment must sign a statement indicating agreement that failure to complete payment by the set deadline will result in receiving no credit for the semester in which the student has defaulted on payment.

Students are expected to meet all financial obligations by the appropriate due date. The university reserves the right to place an hold on the student's record, which will prevent registration for future

semesters and the release of transcripts and diplomas, as well as access to other university services. It is each student's responsibility to be informed of all registration and payment dates and deadlines.

Up-to-date schedules for registration and payment of fees may be obtained from the Office of the Registrar (ext: 2570 /2571), the website https://www.aub.edu.lb/registrar/pages/default.aspx or at the e-mail address: registrar@aub.edu.lb

Academic Rules and Regulations

Categories of Students

To be considered a full-time student, a student must carry a minimum load of 9 credits per semester. For summer full-time, the required load is 6 credits. Students can normally register for up to 12 credits per semester and 6 credits during the summer session. The category of part-time students applies to those carrying less than 9 credits per regular semester or less than 6 credits for the summer.

Supervision

Each student has an academic adviser who must approve the student's schedule each semester. The student's adviser is appointed by the graduate faculty of the school. These advisers will maintain their relationship with the students and help in planning the student's course of study until they graduate from the MSN program.

For students working towards a thesis, a thesis adviser is assigned who must be a full-time faculty member and will serve as chairperson of the thesis committee. The thesis adviser and the members of the thesis committee should be of professorial rank.

Attendance

- Students are expected to attend all classes, laboratories and any required activities. Absence of students, whether excused or not, from any class or laboratory session does not excuse them from their responsibility for the work done or for any announcements made during their absence.
- Students who absent themselves during a semester more than ***one third*** of the number of hours of any course lose all credit for the course.
- Students may *not* be excused from laboratory and field requirements. All missed clinical and field requirements must be made up. In case of repeated absences from clinical courses, ***over one third of the total hours***, the student may be asked to drop the course.
- Students who fail to sit for scheduled examinations, or fail to fulfill course requirements, will be given the minimum grade for graduate courses, which is 55. Results of tutorial courses, clinical and administrative residencies, projects, or theses will be reported as pass (P) or fail (F).

Examinations and Quizzes

Students may not absent themselves from announced final examinations and quizzes unless they present an excuse considered valid by the coordinator of the course. The course coordinator may then require the student to take a make-up examination.

Computer Literacy

Masters students are expected to have a basic level of computer literacy. Ability to use Microsoft Word, Power Point and spread sheets software is a minimum requirement, since most courses require term papers and oral presentations. For students who are weak in this area, a number of workshops on the use of various computer programs are offered regularly by the Academic Computing Center, accessible through AUB website, or by calling 2260 or 3580. Students must also know how to do electronic literature searches using databases such as MEDLINE and CINHAL. The Saab Medical librarian offers regular sessions, or per request about searching the literature. Call Dr. Ola Zein at 5911 for further questions.

RCR Requirement

The Responsible Conduct of Research (RCR) Requirement must be completed by all newly admitted degree seeking graduate students, both at the Master's and PhD levels. The requirement includes prospective graduates and graduates admitted on probation.

The requirement is fulfilled by in the RCR course section determined by the student's respective Faculty and department/program. RCR courses "cover core norms, principles, regulations, and rules governing the practice of research." Topics include research misconduct, data management, authorship, peer review, mentoring, using animal subjects in research, conflicts of interest, collaborative research, and research involving human subjects. Additional topics may be included according to research discipline.

The requirement must be fulfilled within the first month and is marked by a passing grade. Failure to fulfill the requirement in a timely manner results in a registration hold that is removed once the student has fulfilled the requirement.

Courses and Grades

Courses taken as part of a student's graduate study program fall in one of two categories: graduate or prerequisite, with different grading systems.

- *Graduate Level Courses*
  Graduate level courses in Nursing are numbered 500 and above. The minimum passing grade for a graduate course is 70. However, students are required to maintain a cumulative average of at least 80 in all courses taken for graduate credit. Projects, thesis and residency courses are graded as Pass/Fail.

- *Prerequisite Courses*
  These are usually undergraduate courses taken to make up for any deficiencies in the student's background. They do not carry graduate credit. The minimum passing grade for a prerequisite course is 70.

Grading System

Evaluation of the student's achievement will include their work in theory, practice, as well as professional attitudes and behavior.

AUB follows the grading system below

Grade Conversion Chart

Course Letter Grade	Numeric equivalent	Quality Points
A+	93-100	4·3
A	87-92	4·0
A-	83-86	3·7
B+	79-82	3·3
B	75-78	3·0
B-	72-74	2·7
C+	69-71	2·3
C	66-68	2·0
C-	63-65	1·7
D+	61-62	1·3
D	60	1·0
F	< 60	0·0

Note: The GPA at AUB is capped at 4.0

I	P	PR	W	NP
Incomplete	Pass	In Progress	Withdraw	No Pass

Incomplete Grades

A student who has an incomplete on one course must complete the work required for the course within one month of the start of the next regular semester. In exceptional circumstances the graduate committee may decide to give the student additional time to complete the course.

Incomplete course work will be reported as "I" that is followed by a grade reflecting the evaluation of the student available at the end of the semester. This evaluation is based on a grade of zero on all missed work. If the work is not completed within the period specified, the "I" is dropped and the grade becomes the final grade.

Probation and Dismissal

A student working towards a master's degree in Nursing "MSN" may be placed on probation by the Hariri School of Nursing Graduate Studies Committee if he/she:

- Is admitted to graduate study on probation,
- Fails in any course taken for graduate credit, and
- Does not maintain the required cumulative average of 80.

The probation may be removed upon the recommendation of the Graduate Studies Committee of the School if the student has completed a minimum of 9 credits of graduate level courses within the two consecutive semesters after being placed on probation, has passed all courses, and has obtained the cumulative average of at least 80. If the student fails to meet any of these conditions, s/he will be dropped from the program.

The Graduate Studies Committee may discontinue a master's student from graduate study if:

- Probation status is not removed within a period of two semesters in which the courses that are taken are for credit, or
- In the opinion of the department, and irrespective of the grades obtained, the work of the student is deemed unsatisfactory, or
- The student fails the comprehensive examination twice, or fails the thesis defense twice.

Residence Requirements

To meet the minimum residence requirements for the master's degree, a student should register and be in residence as a graduate student for at least two semesters and two summers, or four summers.

Leave of Absence

- All graduate students are expected to make steady and satisfactory progress toward the completion of degrees. Students who are not enrolled for a period of more than one academic year (two consecutive regular terms and one summer) will be considered to have withdrawn from the program unless they apply for a leave of absence and secure approval of the department, School Graduate Studies Committee, and Graduate Council.

- The leave of absence application can be up to one academic year at a time. The maximum period of approved leave of absence is for two academic years. An approved leave of absence does not count towards maximum residency. Non-enrollment by the student for one semester without securing leave of absence will count towards maximum residence.

- Students who seek to return without having secured leave of absence approval after a non-enrolment period of 12 months must reapply and will be considered for readmission following regular AUB application/admission procedures. If re-admitted into the same graduate program, then their earlier status as graduate student will count towards maximum residence.

- The Leave of Absence Application Form should normally be submitted to the respective department/faculty at least one month prior to the beginning of the semester in which absence is planned. The form can be downloaded from the following site:http://www.aub.edu.lb/graduatecouncil/Pages/regulationsandforms.aspx

Readmission

The following factors govern students seeking readmission:

- Students in good standing who withdrew voluntarily shall be granted readmission to the School if the period between the end of the semester or session of withdrawal and the beginning of the semester for which readmission is sought is not more than four regular semesters. The readmission request must be submitted to the Office of the Registrar at least one month prior to the beginning of the semester or the summer session to which readmission is sought.
- Students who have left the university for more than two years must submit the readmission request to the Office of the Registrar and must have the approval of the Admissions Committee of the Hariri School of Nursing.
- Students who have left the School while on probation will remain on probation for one semester and have to clear the probation status at the end of a regular semester, or else they will be dropped from the School.

Masters' Completion Program

Overview of the Curriculum

The curriculum includes 37 to 40 credits (depending on the track of study) and may be completed in two years on a full-time basis. Part time students must complete the program requirements within a maximum period of four years. Extension beyond the maximum allowed period of study requires the approval of the Graduate Studies Committee of the faculty and the Graduate Council.

The components of the master's program include: 1) Core courses, 2) Specialty courses, and 3) Elective Courses, and 4) a project or thesis. The Hariri School of Nursing offers the MSN degree in the following four tracks:

1. Adult-Gerontology Clinical Nurse Specialist (39 credits), with an optional minor in Nursing Education,
2. Nursing Administration and Management (37 credits)

3. Psychiatric Mental Health Clinical Nurse Specialist, with an optional minor in Nursing Education.(40 credits)
4. Community and Public Health Nursing, with an optional minor in Nursing Education (40 credits)

Students in any track may opt to take an additional 12 credits of coursework towards a minor in nursing education.

Both thesis and non-thesis options are available in all tracks. Below is a general description of the courses required for graduate education in nursing. Students may receive credit for graduate level courses only. Appendix A provides sample study plans for students in the various tracks for full time and part time study.

Curriculum Masters of Science in Nursing

Core Courses		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
NURS 500	Theories, Concepts and Ethical frameworks for Advanced Nursing Practice	2	0	2
NURS 501	Advanced Nursing Practice: Scope and Roles	2	0	2
NURS 530	Statistical Reasoning and Application in Nursing Research	1	2	2
NURS 502	Advanced Nursing Research	3	0	3
NURS 527	Systems Approach to the Development and Evaluation of Health Care Services	3	0	3
Concentration Courses		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
Adult-Gerontology Track				
NURS 503	Advanced Health Assessment	2	3	3
NURS 504	Advanced Pathophysiology	3	0	3
NURS 505A	Advanced Practice in Adult-Gerontology I	2	8	4
NURS 505B	Advanced Practice in Adult-Gerontology II	2	8	4

NURS 506	Advanced Practice in Adult-Gerontology III (residency)	0	16	4
PHRM 314	Advanced Pharmacology and Therapeutics	3	0	3
	Electives	-	-	0-3
Nursing Administration and Management Track		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
NURS 507	Essentials of Nursing Administration and Management	2	0	2
NURS 508	Advanced Practice in Nursing Administration (residency)	0	16	4
NURS 531	Practical Applications of Budgeting in Nursing	1	0	1
NURS 525	Leadership Theories and Applications for Nurse Managers	3	0	3
NURS 520	Managing Quality with Teams	3	0	3
NURS 533	Advanced Health and Nursing Informatics	3	0	3
MNGT 332*	Human Capital Management	3	0	3
	Electives	-	-	0-3
Psychiatric Mental Health Nursing Track		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
NURS 503A	Advanced Health Assessment for Mental Health	1	0	1
NURS 504	Advanced Pathophysiology	3	0	3
NURS 512	Advanced Psychiatric and Mental Health Assessment	1	3	2
PHRM 314	Advanced Pharmacology and Therapeutics	3	0	3
NURS 516	Psychopathology and Human Behavior	3	0	3
NURS 517	Models of Treatment Psychotherapy (Bio-behavioral Nursing Interventions)	1	6	3

NURS 518	Group and Family Psychotherapy	1	6	3
NURS 519	Clinical Residency in Acute Psychiatric Care	0	16	4
	Electives	-	-	0-3
Community and Public Health Nursing Track		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
NURS 503	Advanced Health Assessment	2	3	3
NURS 504	Advanced Pathophysiology	3	0	3
PHRM 314	Advanced Pharmacology and Therapeutics	3	0	3
EPHD 300	Principles of Epidemiology	2	0	2
NURS 522	Principles and Practice of Community Health Nursing	2	3	3
NURS 523	Advanced Community Assessment	2	3	3
NURS 524	Clinical Residency in Community Health Care	0	16	4
	Electives	-	-	0-4
Minor in Education				
EDU 318	Test Construction in Education	3	0	3
EDU 326	Theory and Design of Curriculum	3	0	3
NURS 509	Role development in Nursing Education	3	0	3
	Elective in education	3	0	3
Thesis/Project				
NURS 599 or	Thesis	–	–	6
NURS 598	Project	–	–	3
And Elective		–	–	3
NURS 526	Comprehensive Exam	-	-	0

*Students may take MNGT 332 or any equivalent course.

Students may take an equivalent of 3 credits as elective in any major that helps them with their studies. For students doing a minor in nursing education, the elective credits must be in education. The Hariri School of Nursing also offers special topic courses ranging from 1 to 3 credits that cover nursing issues of interest to students in the various tracks. These courses can be counted toward the elective credits.

Course Description

NURS 500 Theories, Concepts and Ethical Frameworks for Advanced Nursing Practice 2.0; 2 cr.

This course introduces students at an advanced level to conceptual resources for advanced nursing practice. The course is organized around four themes: conceptions of science and nursing knowledge; antecedents and applications of theories relevant to nursing practice; healthcare ethics; and, nursing and politics. The course focuses on the application of conceptual models to current and future nursing practice.

NURS 501 Advanced Nursing Practice: Scope and Roles 2.0; 2 cr.

This course provides the student with knowledge related to the advanced practice roles and competencies. Students develop a vision and structure for Advanced Nursing Practice that includes the Consensus Model for Advanced Practice Registered Nurse, regulation, credentialing, and emerging professional issues. The course concentrates on the foundations and philosophy of care in different specialties and health care.

NURS 502 Advanced Nursing Research 3.0; 3 cr.

This course focuses on complex research designs, interpretation of research findings and development of research proposals. The interrelationship of theoretical frameworks, quantitative/qualitative design, sample selection, data collection instruments, and data analysis are analyzed in terms of clinical nursing research problems.

NURS 503 Advanced Health Assessment 2.3; 3 cr.

This course focuses on the advanced comprehensive assessment of individuals using a case based approach. Students are provided with advanced knowledge and skills in clinical interview, focused history taking, psychosocial and physical assessment, and diagnostic reasoning.

NURS 503A Advanced Health Assessment for Mental Health 1.0; 1 cr.

This theory course focuses on the comprehensive health assessment of clients using a biopsychosocial approach. Mental health students will build on their knowledge and skills in clinical interviewing, focused history taking, and critical analysis of client data to identify actual and potential health problems. The focus will be on the differential diagnosis of various case presentation with organic and psychological etiologies.

NURS 504 Advanced Pathophysiology 3.0; 3 cr.

This is a course in advanced pathophysiology related to acute and chronic illnesses experienced by adults and older adults. Emphasis is placed on pathophysiologic nursing phenomena experienced across diseases, their manifestations and assessment measures. Case studies are used to illustrate application to advanced nursing practice.

NURS 505A Advanced Practice in Adult-Gerontology I 2.8; 4 cr.
This course builds on N504 & N503 and includes a theory and a clinical component. Emphasis is on further refinement and extension of pathophysiological concepts and assessment skills in the management of adult and older adult clients with chronic health problems. Health promotion and risk reduction strategies are also addressed. *Prerequisite: NURS 503*.

NURS 505B Advanced Practice in Adult-Gerontology II 2.8; 4 cr.

This course addresses advanced nursing practice in adult care and includes a theory and a clinical component. Emphasis is on further refinement and extension of pathophysiological concepts and assessment skills in the management of adults and older adults with acute and critical care conditions. . *Prerequisites: NURS 503 and NURS 504*.

NURS 506 Advanced Practice in Adult-Gerontology III 0.16; 4 cr.
This is a practicum in which students apply content learned in NURS 503, 504, 505and 515, and use concepts learned in NURS 501 and PHRM 314, in the advanced management of adult and older adult clients with various illnesses. Interdisciplinary collaboration, research utilization, educational activities and case management are emphasized in a specialty area of practice. *Prerequisites: NURS505B and PHRM 314.*

NURS 507 Essentials of Nursing Administration and Management 2.0; 2 cr.

This course introduces management concepts and techniques. It focuses on three core topics: roles and responsibilities of managers; leading organizational effectiveness; and strategic planning. The focus is on using management models and concepts to work towards improved organizational effectiveness. Case studies of organizational problems provide the basis for group practical work.

NURS 508 Advanced Practice in Nursing Administration 0.16; 4 cr.
This practicum focuses on developing advanced management and administrative nursing skills in hospitals and primary health care settings. *Prerequisite: NURS 507.*

NURS 509 Role Development in Nursing Education 3.0; 3 cr.
This course addresses principles of teaching and learning, instructional methods, test construction and use, as well as curriculum and program development as applied to nursing. The course enables students to apply educational theory and research in various settings such as schools of nursing and staff development centers. **Required for the minor in education.**

NURS 512 Advanced Psychiatric and Mental Health Assessment 1.3; 2 cr.
This course focuses on the advanced comprehensive mental health assessment of individuals using a case based approach. Students are provided with advanced knowledge and skills in clinical interview, focused history taking, mental status examination and diagnostic reasoning. The student performs comprehensive assessment and D.S.M. IV diagnosis on adult populations.

PHRM 314 Advanced Pharmacology and Therapeutics 3.0; 3 cr.
This course covers pharmacology and drug therapy related to advanced nursing practice. General principles of pharmacokinetics pharmacotherapeutics, pharmacogenetics and considerations for

special populations are covered. Classes of drugs, their mechanism of action, drug selection, dosage, therapeutic and adverse effects, and patient monitoring are discussed using case studies of clinical conditions. *Students are required to have taken pharmacology at the undergraduate level before PHRM 314*.

NURS 516 Psychopathology and Human Behavior 3.0; 3 cr.
This theory course examines the effects and/or sequels of alterations in selected bio-behavioral processes in the adult human suffering from illnesses with critical onsets and long-term unstable conditions. It focuses on the study of the brain and behavior and the neurological, physiological and biochemical foundations of cognition, mood and affect. Students will be exposed to advanced assessment skills, selected theories and research to identify complex psychiatric disorders and interventions utilizing case studies.

NURS 517 Models of Treatment-Psychotherapy 1.6; 3 cr.
(Bio-behavioral Nursing Interventions)
In this course, students learn the models of treatment of psychiatric and mental health disorders, and become trained on psychotherapeutic interventions in acute settings. Theories on individual psychotherapy, crisis intervention, group and family therapy are covered. This course has a clinical component where students do practicum in a psychiatric care department. In this course students learn the application of the acquired knowledge in the field of practice and start to practice their role.

NURS 518 Group and Family Psychotherapy 1.6; 3 cr.
This course is complementary to the "Models of Treatment" course, and it focuses on group and family psychotherapeutic interventions. Students synthesize knowledge of theories in the provision of care to groups and families with complex psychiatric problems. Family and group intervention strategies are discussed in a variety of settings. Students explore the practice of these interventions in psychiatric care departments.

NURS 519 Clinical Residency in Acute Psychiatric Care 0.16; 4 cr.
The purpose of this clinical practicum course is to provide opportunities for students to apply the content learned from courses. Students will use assessment skills, selected theories, and research to identify complex health problems and interventions for diverse populations. The focus is on advanced case management and practice of the role, which is further developed as the student integrates theory and practice skills in acute and chronic or community settings. Students will spend 224 hours of clinical hours under the supervision of a preceptor.

NURS 520 Managing Quality With Teams 3.0; 3 cr.
This course addresses theory and application of quality teams, their composition, purposes, function, and decision making tools. Process improvement team and the use of mapping processes for process improvement are a main focus.

NURS 522 Principles and Practice of Community Health Nursing 2.3; 3 cr.
This course introduces concepts and issues relevant to the advanced practice of public and community health nursing. Areas of focus include health promotion, management of chronic disease and health education. The course will use case studies in class and field work in the

community.

NURS 523 Advanced Community Assessment and Interventions 2.3; 3 cr.
This course focuses on the nursing assessment of the health of communities using a case based approach. Students are provided with advanced knowledge and skills in population and individual needs assessment and community based interventions. Clinical experience will be provided.

NURS 524 Clinical Residency in Public and Community Health Care 0.16; 4 cr.
The purpose of this clinical course is to provide students with opportunities to apply content learned in community courses, with a focus on advanced case management and health promotion. Assessment skills, theories and research will be utilized in identifying health problems and planning community interventions. *Prerequisites: NURS 522 and NURS 523.*

NURS 525 Leadership Theories and Applications for Nurse Managers 3.0; 3 cr.

The aim of this course is to promote familiarity with, critical thinking about, and applications of evidence-based theories of leadership in nursing settings. The course encourages a reflective and analytical approach to cultivating effective personal leadership behaviors. The course introduces the full spectrum leadership model, examines its transformational leadership components in depth, and explores similarities and differences between transformational leadership and related leadership theories.

NURS 527 Systems Approach to the Development and Evaluation of Health Care Services 3.0; 3 cr.

The purpose of this course is to introduce students to the development and implementation of health service programs/projects intended to improve health care, practice, and health system's outcomes. The course addresses assessment of contemporary issues affecting health such as those of the epidemiology of diseases, healthcare policies, socio-cultural, geo-political, and economic. It focuses on the theory and practice of planning from a system's perspective and introduces conceptual approaches and techniques of program evaluation. Students will prepare a project plan as part of the course.

NURS 526 Comprehensive Exam 0 cr.

NURS 530 Statistical Reasoning and Application in Nursing Research 1.2; 2 Cr.

This class introduces students to the basic concepts and applications of statistics for nursing research and how to carry these applications using SPSS. The primary objective of the course is to provide students with the skills necessary to understand basic statistical analyses and carry out those analyses using SPSS. Descriptive, bivariate and linear multiple regression are covered.

NURS 531 Practical Applications of Budgeting in Nursing 1.0; 1 cr.

This course focuses on practical applications of concepts in budgeting and basic financial management. Participants will learn to develop a budget and evaluate the financial status of a department or operating unit and determine what, if any, corrective actions need to be taken.

The course presents various analytical methods in management decision making, including variance analysis, and break-even analysis.

NURS 533 Advanced Health and Nursing Informatics 3.0;3 Cr.
This course helps students acquire a foundational and practical understanding of the discipline of health informatics. It introduces health informatics concepts and competencies utilized in monitoring and evaluating nursing practice. The course examines the use of digital tools to foster engagement of patients, families and consumers in their health care. Emphasis is also placed on how Electronic and Personal Health Records can facilitate health information exchange.

NURS 598 Project 3 cr.
Special projects directed toward acquiring skills needed in the development of programs relevant to nursing care within the student's area of interest. Projects vary depending on the track of study.

NURS 599 Thesis 6 cr.

Below are courses in other faculties that students in the Nursing Administration and Management track and Community and Public Health Nursing track must take:

MNGT 332 Human Capital Management (3 credits): An advanced analysis of the human resource function and the challenge of managing human capital in a modern corporation. The course highlights the interrelationships of the different human resource management functions and the strategic role of the HR in today's environment, and capitalizes on new trends and actual case examples to illustrate current HR best practices. **Required in the nursing administration and management track.**

EPHD 300 Principles of Epidemiology (2 credits): A course in principles, concepts and applications of epidemiology in the public health field. The course consists of lectures, assigned readings and complementary practical sessions that provide students with basic epidemiological knowledge and tools relevant to public health practice. Students are given the opportunity to acquire an understanding of the vocabulary of epidemiology and methods of epidemiological research, investigation and control. Topics covered include rubrics of epidemiology, morbidity and mortality measures, sources of epidemiological data, outbreak investigation, epidemiological study designs, causal inference and causation in epidemiology. This course also covers an overview of the major biological agents associated with infectious and communicable diseases with a focus on disease ecology, etiology, transmission and contagion modes. **Required for the Community and Public Health Nursing Track students.**

Minor in Education. *Required and Elective Courses include:*

EDUC 301 Seminar in the History and Philosophy of Education (3 credits*):* Development of educational thought and practice through primary sources. Systems of educational theory will be examined from the age of Pericles to post World War II, with special emphasis on contemporary educational practice. *Annually.*

EDUC 315 Psychology of Education (Advanced) (3 credits): A comprehensive analysis of instructional theory, measurement skills, cognitive development, learning theory, and methods of applying behavior modification in the classroom. *Prerequisite: EDUC 215. Annually.*

EDUC 326 Theory and Design of Curriculum (3 credits): Examination of organization, scope, and sequence of curricula with special emphasis on various approaches to curriculum development. *Annually*. **Required for the minor in education.**

EDUC 318 Test Construction in Education (3 credits): Development of testing techniques and skills for appraisal of the cognitive and affective objectives of instruction. *Alternate years*.

Other possible courses include EDUC 303, 313, & 330. **Required for the minor in education.**

Comprehensive Examination

Students are required to sit for a written comprehensive examination according to AUB regulations. The purpose of this exam is to assess the students' overall synthesis of all the components of the Master's degree program, i.e. integrating of theory, practice, and research.

The student must pass the comprehensive examination after completion of most of the course requirements for the MSN degree. Students must register NURS 526 (zero credit course) the semester during which they plan to take the comprehensive exam.

Students must take the comprehensive exam before doing their residencies and projects/thesis, except full time students who may take it concurrent with their project or residency. The Graduate Studies Committee of the

Hariri School of Nursing shall set the timing of the examination. The student who does not pass the comprehensive examination may take it a second time after a period of at least three months. See Appendix B. **The comprehensive examination is offered twice per year (November and April); dates are announced early during the academic year**.

Thesis/Project

Two types of master's degree programs are available:

- *A master's program requiring a thesis* based on independent research work. Students following this program are required to present a 6 credit thesis, in addition to completion of the courses required in the track of study.

- *A non-thesis master's program*: The student following this program is required to do a 3 credit hour project that should be approved by the student's advising team and the Graduate Studies Committee, in addition to completion of the courses required in the track of study and 3 credits of electives..

Guidelines for Thesis and Project

All MSN students are required to develop a scholarly product that contributes to the generation or application of knowledge to enhance practice, education, theory or policy. The student should negotiate the scope and objectives of the product with the faculty advisement team. For a thesis,

the advisement team would be the thesis committee. For a project, the team would include the student's adviser and a second reader. The composition of the project advisement team shall be approved by/communicated to the program coordinator.
MSN students need to declare their choices of the thesis/project soon after enrollment, preferably making specific plans about the thesis/project by the time they have completed 12 credits so that this requirement can be completed in a timely manner.

For those students enrolled in the MSN with thesis option, the student must submit a thesis based on original, independent research. The thesis must be in English. An abstract not exceeding 350 words must be submitted with the thesis. Once approval for writing the thesis/project is granted, students must conform to the University Thesis Manual found in the library. Application of the thesis manual is mandatory, and those not conforming to its requirements will not be accepted. The student must submit copies of the thesis to the members of thesis committee, unbound but ready for binding, at least two weeks before the thesis defense. The thesis manual guidelines are available at http://website.aub.edu.lb/ulibraries/Documents/ThesisManual/thesis-manual.pdf

The AUB HSON utilizes the writing guidelines of the American Psychological Association (APA) 6th Edition in all written requirements such as term papers of courses. The link below provides adequate guidance for how to organize papers, cite references inside the text and display the reference list using the APA style:

https://owl.english.purdue.edu/owl/resource/560/01/

Project

Project types assume comparable levels of student involvement, performance and scholarship. Projects must be over and above papers and projects completed for course requirements. Options for the project include:

1. **Report of Research Findings**: students may use existing data under a faculty member's guidance to prepare a scholarly paper of publishable quality.
2. **Research Experience**: Active participation in a Faculty member's project with hands-on experience in phases of the project, like writing a proposal, design of the study, data collection, data analysis and reporting of results. The product of this experience would include a summary of the student's learning in the experience, a description of the student's contribution to the project, and a paper on a topic relevant to the project.
3. **Innovations in Practice**: These may include:
    a. **Research Utilization**: Development of an action plan for research utilization in targeted areas. This includes development of the associated clinical protocols/clinical practice guidelines and plans for implementation and evaluation.
    b. **Small needs assessment studies for program development**.
    c. **Educational Media**: Development of an instructional media project or web-based instruction and demonstration of the appropriateness of the product to a specific audience.
4. **Policy Development or Analysis:** This may include:
    a. **Organizational/ Institutional Studies**.

b. **Policy Initiatives**: Development of a position paper which is research- based, aimed at changing a specific policy or policies. This must be aimed at a group of policy makers to effectively promote change.

5. **Other Options**: Any other project of interest to students that is related to significant clinical, theoretical, management or policy topics. All projects should demonstrate a research emphasis.

Any project/thesis that involves human subjects' research needs to be approved by the institutional review board (IRB) before data collection begins. See the IRB website for guidance on the process : www.aub.edu.lb/IRB**.**

Procedure for Project Completion

First the project advisement team and an abstract outlining the project plan is approved by the Graduate Studies Committee at least 4 months before the project defense. The adviser is a faculty member with the primary responsibility of overseeing the ongoing work of the project. The reader is not necessarily involved in continuous advisement but brings expertise. His/her role may vary in the amount of involvement.

The student meets regularly with the adviser during the project work. A final meeting is then scheduled with the advisement team to ensure successful completion of the project. Criteria for evaluation of projects in administration, adult care, and education are attached in appendix B. Projects are graded as Pass/Fail. Grading criteria for projects are shown in Appendix C.

- First registration (3 credit course) to be billed for 3 credits.
- Second registration (zero credits) to be billed for 0 credits.
- Registrations beyond the second time should be the exception for projects and, thus, will require Faculty Graduate Committee approval and students will register for the project (zero credits) and be billed for 1 credit.

Thesis

Thesis Proposal

The thesis committee and an abstract outlining the study plan must be approved by the Graduate Studies Committee Committee at least 4 months prior to the thesis defense.

. Then students prepare a proposal outlining the research plan. This proposal needs to be approved by the student's thesis chair and committee members before proceeding to the data collection stage.

Thesis Committee

The Master's thesis committee should be composed of at least three members approved by the chairperson of the program. The thesis topic and Committee membership must be approved at least 4 months prior to the thesis defense date. It is advisable that the thesis committee includes one member from outside the Hariri School of Nursing, who may be from an institution outside AUB. All committee

members should hold professorial rank. The thesis committee approves the thesis topic and research program and conducts the thesis defense.

Thesis Defense

The thesis defense is open to the public and must be carried out no later than the dates specified in the table below depending on the graduation semester.

Target semester of graduation	Summer 2019-20	Fall 2020-21	Spring 2020-21
Approval of Thesis Topic and Committee	May 18, 2020	September 22, 2020	December 14, 2020
Thesis Defense	September 8, 2020	January 28, 2021	April 28, 2021
Thesis Deposit at Library	September 18, 2020	February 8, 2021	May 10, 2021

*The thesis proposal should be approved by the faculty/school Graduate Committee at least four months before the thesis defense. The above thesis deadlines are generally set according to the stated formula, however, they are subject to change due to administrative constraints

'Pass' or 'fail' is reported for the thesis and defense. In case of failure, the students may resubmit the thesis and defend it after a period of at least three months. Failure the second time leads to discontinuation from graduate work.

Students must be registered for the thesis or at least one course in the semester or session during which they expect to graduate in order to present their defense.

Deposit of Thesis in the Library

After passing the thesis defense examination, the student is required to deposit two hard copies and one CD copy of the thesis at Jafet Memorial Library. A library receipt of these copies must be delivered to the Office of the Registrar before the student is awarded the degree. The student should sign a release form indicating whether or not the library is authorized to supply copies of the thesis to other libraries or to individuals. The non-authorization option is valid for a period of two years only, after which copies of the thesis will be supplied on request.

Research

The faculty of the Hariri School of Nursing believes that research is a major component of the MSN program and is basic to the development of a scientific knowledge base for practice. Information on faculty research is available on the web and is updated on a regular basis with new faculty. Appendix D lists the graduate faculty research profiles.

The faculty of the Hariri School of Nursing at AUB believes that:

- Nursing research contributes to the advancement of knowledge development in general and to the body of nursing knowledge in particular.
- Nursing research is basic to effective nursing practice.
- Programs of research generate more in–depth knowledge in a focused area of research.
- A thesis could be generated from established programs of research. This improves the depth and quality of studies. It provides the student with unique opportunity of working with a circumscribed area of research under the mentorship of an expert faculty member.
- Possibilities also are made available for students to generate their own thesis topics under the supervision of available expertise. This encourages originality and applicability of research. Students are encouraged to choose topics of interest in close consultation with their adviser.

Publication rights based on thesis/project work

- Students publishing Thesis/Project Work, which is within established programs of research at the Hariri School of Nursing should do that in close consultation with their mentors. Agreement on authorship needs to be established in advance.
- It is customary that students writing articles based on original thesis work should be designated as first authors and faculty members mentoring their work as second and consecutive authors unless previously agreed otherwise.

AUB Policy on Graduate Assistantships

Assistantships covering tuition and partial living expenses are available for students at the graduate level in return for a specified number of hours of work per week (maximum of 20 hrs /week) for the Hariri School of Nursing. Assistantships are awarded on the basis of the academic record and departmental needs. Applications for new students are provided within the admissions application package. Refer to AUB's website

http://www.aub.edu.lb. Continuing students may obtain applications from the Office of the Dean of the School. Applications should be submitted early in the semester preceding the semester for which one is applying. For more information about Graduate Assistantship, consult the Dean's Office and the Students Services Officer Mrs Lynn Berbary Najem, 6th floor, Hariri School of Nursing Building.

General Policies and Information

Non-Discrimination Policy – Title IX

AUB is committed to facilitating a campus free of all forms of discrimination including sex/gender-based harassment prohibited by Title IX. The University's non-discrimination policy applies to, and protects, all students, faculty, and staff. If you think you have experienced discrimination or harassment, including sexual misconduct, we encourage you to tell someone promptly. If you speak to a faculty or staff member about an issue such as harassment, sexual violence, or discrimination, the information will be kept as private as possible, however, faculty and designated staff are required to bring it to the attention of the University's Title IX Coordinator. Faculty can refer you to fully confidential resources, and you can find information and contacts at www.aub.edu.lb/titleix. **To report an incident**, contact the University's Equity/Title IX Coordinator Mitra Tauk at 01-350000 ext. 2514, or titleix@aub.edu.lb. An anonymous report may be submitted online via EthicsPoint at www.aub.ethicspoint.com.

Academic and Professional Integrity

Academic integrity and honesty are central components of student's education. Ethical conduct maintained in an academic context will be taken eventually into a student's professional career. Academic honesty is essential to a community of scholars searching for and learning to seek the truth.

Anything less than total commitment to honesty undermines the efforts of the entire academic community. Both students and the faculty are responsible for insuring the academic integrity of the University.

Academic dishonesty, including but not limited to cheating and plagiarism, is deplored and not to be tolerated. Any act for cheating may be ground for probation, suspension and/or expulsion. Any act for plagiarism may be grounds for a failing grade on the paper and in the course. In addition, other sanctions may be imposed by the school for acts of academic dishonesty.

Students are expected to have high standards of integrity in both the clinical and academic settings. Integrity is a reflection of the respect that one holds for oneself and others. It is reflected by students' behavior in class and in the clinical practicum.

In the clinical settings, students are expected to protect patients' confidentiality, and to be honest in any documentation regarding the patient's condition and their own assessment and interventions. Students are expected to maintain high professional standards, including being physically, intellectually, emotionally and academically prepared when caring for patients.

Student Code of Conduct (http://pnp.aub.edu.lb/general/conductcode/index.html)

The purpose of this code is to provide students with a clear statement of the standards of behavior expected in an educational environment, so that they make responsible choices regarding their participation in the academic community and understand the consequences of

their infringement of these standards. Violations may be of an academic or non-academic nature.

Jurisdiction of academic violations lies initially under the authority of the dean of the faculty or school to which the student belongs. Misconduct that is clearly non-academic falls under the jurisdiction of the dean of student affairs who will take the necessary action in consultation with the dean(s) of the faculty or school to which the student belongs.

The following are examples of actions deemed in violation of the Student Code of Conduct; they are not intended to define misconduct in exhaustive or exclusive terms. Any student who violates the principles described in the preamble to this document shall be subject to disciplinary action in accordance with the Student Code of Conduct. The complete student code of document is found at https://www.aub.edu.lb/SAO/Documents/student%20code%20of%20conduct.pdf#search=student%27s%20code%20of%20conduct

Definitions of Misconduct

A. Academic Misconduct

Offences involving academic misconduct include, but are not limited to, the following:

1. Cheating[1]

While taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work.

Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

Recommended range of actions: [3-5].

2. Plagiarism[2]

Whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.

Recommended range of actions: [3-5].

3. In-Class Disruption

Students in class are expected to behave appropriately, and shall not disrupt classes or exams by extraneous conversation and/or misbehaving.

Recommended range of actions: [1-3].

---

[1] Adapted from the Villanova Academic Integrity Code.

[2] Adapted from the Modern Language Association Style Manual and Guide to Scholarly Publishing, as found on Duke University's web page.

4. Dishonesty[3]

Students are expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence). **Recommended range of actions: [1-3].**
b. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes). Recommended range of actions: [3-5].

c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made. Recommended range of actions: [1-3]

e. Unlawfully copying computer software. Recommended range of actions: [2-4].

f. Engaging in bribery of any kind. Recommended range of actions: [3-5].

B. Non-Academic Misconduct

1. Disruption/Obstruction

Students have the right to express their opinions on matters of concern to the University in an organized manner and in a public space, excluding residences on campus, but they must notify and consult with the dean of student affairs before doing so. The nature of the event and any publicity accompanying it must be reviewed by the dean to assure that neither Lebanese law, nor university policies and norms are being violated.

In cases where student-sponsored events, including protests, sit-ins, and demonstrations are, after such consultation, not approved by the dean of student affairs, or, if needed by the Board of Deans or the president, it may become necessary for the dean of student affairs to undertake disciplinary measures and even to instruct campus protection to bring the public gathering to an end.

Disrupting or obstructing the normal educational process or any university function or activity by student demonstrations, sit-ins, or 'strikes' is strictly prohibited. This includes, but is not limited to: disrupting classes, library operations, seminars, exhibitions, meetings, ceremonial events, or examinations; impeding or preventing others from attending such events; falsely activating a disaster alarm; or making a threat.

Under no circumstances are any members of the university family to be intimidated or threatened in the execution of their normal duties and responsibilities. That means that students and faculty who wish to hold or attend classes or to go to their offices or places of study shall not be prevented from

[3] **Adapted from the Villanova University Academic Integrity Code.**

doing so; non-academic staff and administrators shall not be impeded from going to their places of work.

2. Distribution of Unauthorized Published Material

The public distribution and posting of published materials such as fliers, leaflets, posters, audiovisuals, etc., must be approved and stamped by the dean of student affairs. The campus protection office will remove from display any such unauthorized material.

3. Theft

Stealing on campus or at a university-authorized event off campus, including unauthorized use of university equipment or services (e.g., telephones, photocopiers, or computer facilities), or possession of stolen property, is prohibited.

4. Destruction of Property/Endangering Public Safety

Students are expected to protect university property and to respect the safety of others. Acts contrary to these principles, which include, but are not restricted to, the following, are subject to disciplinary procedure:

a. Engaging in vandalism or other intentional damage (such as spray painting or graffiti) to property on campus or at university-authorized events off campus.

b. Littering, such as disposing of waste (empty bottles, cigarette butts, food containers, etc.) in other than designated places on campus.

c. Unjustified discharge, damaging, or tampering with any fire extinguisher, fire alarm, or other safety devices.

d. Taking, or attempting to take, action that damages or could damage private property, without the consent of the owner or person legally responsible.

e. Appropriating, or attempting to appropriate or possess, private property, without the consent of the owner or person legally responsible.

f. Unauthorized entry, unapproved duplication of keys or use of such, or unauthorized use of campus facilities.

5. Mental or Physical Harm

Acts that inflict mental or physical harm are prohibited, including the following:

a. Engaging in physical aggression including, but not limited to, assault.

b. Engaging, or attempting to engage, in intimidation, coercion, extortion, blackmail, or bribery; bullying; threatening violence, injury, or harm to others on campus or at university-authorized events off campus; endangering or tending to endanger the safety, health, or life of any person.

c. Engaging in behavior that creates a substantial risk of, or results in, injury to others, such as committing arson or causing a riot.

d. Using force, inciting violence, inflicting or attempting to inflict injury to others on campus or at a university-authorized event off campus.

e. Engaging in any activity that endangers the health and safety of an individual or demeans an individual in conduct of an unbecoming or humiliating nature, or in any way that detracts from an individual's academic pursuits.

Many of these acts may be interpreted as harassment. Cases of discriminatory harassment are addressed through AUB's Procedures to Address Formal Allegations of Sexual and other Discriminatory Harassment . Cases of non-discriminatory harassment, which do not invoke one of the protected characteristics (race, color, religion, etc.) under the University's Non-Discrimination Policy , are addressed through the Grievance Policy and Procedures .

6. Possession of Dangerous Weapons or Materials

Students must not distribute, possess, store, or use, on campus or at a university-authorized event off campus, any kind of weapon, device, explosive, dangerous chemicals, hazardous materials, or any other instrument designed to do bodily harm or to threaten bodily harm. Instruments used to simulate such weapons, which endanger or tend to endanger any person, shall be considered weapons.

Students are also prohibited from distributing, possessing, storing, transferring, selling or attempting to sell, delivering, using or attempting to use, any illegal drugs, narcotic or hallucinogenic, on campus or at any university-authorized event off campus.

7. Discrimination and Harassment

Students are not allowed to discriminate on the basis of race, gender, age, religion, national origin, ethnic origin, marital status, mental or physical disability. Nor shall they harass, intimidate, insult, or threaten others whether verbally, in writing, or through electronic means.

Engaging in sexual harassment, e.g., requests for sexual favors, unwelcome sexual advances, unwelcome physical contact of a sexual nature, spoken comments or abuse (including email) of a sexual nature, and the public display of sexually suggestive objects or pictures is prohibited (refer to the University Policy Against Discrimination and Harassment).

8. Smoking and Alcohol

The consumption of alcohol, on campus, by students is not permitted. Smoking is not permitted in university buildings other than private residences and those areas within the student dormitories, as may be designated from time to time by the dean of student affairs (refer to the University Policy on Smoking).

9. Inappropriate Sexual Behavior

Publicly engaging in sexual behavior is prohibited as deemed by Lebanese law.

10. Use of Computers

Accessing protected computer accounts or other computer functions, knowingly transmitting computer viruses, and unethical use of AUB access is prohibited (refer to the University Policy on the Use of Computers).

1. Inappropriate conduct in AUB libraries

Any action that impedes the safe and effective use by all patrons of the AUB libraries for the purpose of study, research, reading, and other intellectual pursuits, is prohibited (refer to the University Policy on Appropriate Conduct in Libraries).

Disciplinary Actions

Disciplinary action will be imposed according to the nature (academic or non-academic) and severity level of the violation.

A. Academic Misconduct

In principle, enforcement of disciplinary actions for academic violations is carried out by those immediately responsible.

It is the responsibility of the faculty to uphold university policies. Thus, the immediate responsibility for dealing with instances of cheating, plagiarism, and other academic violations rests with the faculty member. If a faculty member has good reason to believe that a student has violated academic standards, it is his or her responsibility to discipline the student expeditiously.

A faculty member who has good reason to believe that a student has violated academic standards must give a grade of zero on the exam or assignment where the violation occurred.

When the instructor has taken disciplinary action, he or she should send a letter to the Student Affairs Committee in the faculty or school in which the student is enrolled, informing that committee of the incident and the action taken. A copy of the letter will be placed in the student's file, as well as forwarded to the student's adviser for follow-up.

B. Non-Academic Misconduct

Violations of a non-academic nature are the responsibility of the dean of student affairs, in consultation with the dean of the faculty or school in which the student is enrolled and, as

necessary, the chief of campus protection. Students should know that the laws of the Republic of Lebanon apply on campus, and those who violate these laws may be subject to criminal prosecution.

C. List of Primary Disciplinary Actions

Documentation of disciplinary actions, other than suspension and expulsion, will not become part of the student's permanent record. Records of the University Disciplinary Committee decisions, including charges and sanctions, will be

maintained as part of the confidential records in the office of the respective dean, for a period of up to four years after the student graduates or ceases to be a student.

Range of Actions:

Warning

This may be oral or written. It is a statement that the student has inadvertently violated a university regulation. The warning will be recorded in the respective dean's records and the student will be documented.

Examples: *Littering and smoking in prohibited areas.*

Reprimand

This will be in writing. It is a statement that the student has violated a university regulation. It is intended to communicate most strongly, both the disapproval and the reprimand of the university community. The reprimand will be kept in the respective dean's records.

Examples: *Inadvertent plagiarism - failure to cite sources appropriately, and inappropriate physical contact.*

Dean's Warning

This will be in writing. Only two Dean's Warnings are allowed in a student's academic career at AUB. It is recommended that any violation of university regulations after the second Dean's Warning results in consideration of suspension. Such a warning is kept in the file of the student and the respective dean's records.

Examples: *Plagiarism, academic dishonesty, disruption-obstruction, mental or physical harm, discrimination and harassment.*

Suspension

This will be in writing and will form part of the student's permanent record. A student will be suspended for a fixed period of time during which the student may not participate in any

academic or other activities at the University. At the end of the suspension period, the student may be readmitted to the University, only upon the recommendation of the University Disciplinary Committee.

Examples: *Cheating, theft, and destruction of property.*

Expulsion

This will be in writing and will form part of the student's permanent record. Expulsion denies the student the right to participate in any academic or other activities of the University for an indefinite time. Only under the most unusual circumstances, and upon the recommendation of the University Disciplinary Committee, will an expelled student be readmitted to the University.

Examples: *Academic dishonesty, possession of dangerous weapons or materials, and endangering public safety.*

N.B. Any person who maliciously lies to cover up an act sanctioned by the code of conduct will be considered to be an accessory after the fact and may be subject to disciplinary action.

D. Required Withdrawal from Campus Pending Hearing

In extraordinary circumstances, when the student's continued presence is deemed a danger to the university community, the student will be required to withdraw from the campus, pending a meeting of the University Disciplinary Committee. This action shall normally require the approval of the president of the University.

E. Secondary Disciplinary Actions

In addition to the disciplinary actions listed above, the following secondary disciplinary actions may be imposed upon those who violate the Student Code of Conduct. Secondary disciplinary actions may be of an academic or non-academic nature.

Secondary Disciplinary Actions – Academic

- The student may be prohibited from participating in the work study program.
- The student may be prohibited from receiving any form of financial aid, scholarship, or monetary award.
- The student may be prohibited from receiving any form of honor, merit award, or other academic recognition award.
- The student may be prohibited from holding a graduate assistantship.
- The student may be given a failing grade in a course or a test or any other form of academic assessment.

Secondary Disciplinary Actions – Non-Academic

- The student may be prohibited from representing AUB in any official role, activity, or event.
- The student may be prohibited from serving as an officer of any AUB organization including club, team, or society.

- The student may be prohibited from living in any AUB hall of residence or similar facility.
- The student may be strongly advised to attend treatment or counseling as determined by the director of the counseling center, in consultation with the dean of student affairs.
- The student may be required to make financial restitution.
- The student's case may be referred to an external agency for further action (this could include the filing of criminal charges).

Complaint Procedure

Any person subject to, or who witnesses, a violation of the Student Code of Conduct should forward a written complaint to a faculty member, a chairperson, or any university official. Academic violations shall be forwarded to the dean of the faculty to which the student accused of the violation belongs. Non-academic violations shall be referred to the dean of student affairs. Violations that may require suspension or expulsion will be referred by the concerned dean to the University Disciplinary Committee.

Formal Hearing by the University Disciplinary Committee

The University Disciplinary Committee will deal with alleged violations in a manner that ensures that those charged with a violation understand the charge and the evidence against them and are afforded a reasonable right of rebuttal.

The University Disciplinary Committee shall inform the student of the charge in writing. Evidence shall be presented in the presence of the student who shall have a reasonable right of rebuttal including the right to cross-examine witnesses. In determining penalties, the committee may take into consideration the student's cumulative discipline record.

Appeal Procedure

Any student who is charged with a disciplinary offense has the right to a full and fair hearing for any disciplinary charges brought against him or her under university regulations.

If any of the following apply, a student may appeal to the dean of the faculty or school regarding faculty or departmental decisions, or to the University Disciplinary Committee against disciplinary action taken by the dean of student affairs or the dean of the faculty or school to which the student belongs:

1. Procedural error
2. New evidence
3. Unsupported conclusion
4. Disproportionate sanctions

The outcome of this appeal may result in higher, lower, identical, or no sanctions at all being imposed. The University Disciplinary Committee's decision shall be final.

Student Grievance Policy

Undergraduate or graduate students may consider informal or formal procedures to seek redress for what they believe to be unfair, improper, or discriminatory decisions, actions, or treatment contravening the established policies and procedures of the University. These grievance procedures neither supersede, nor take precedence over established university procedures or due process for any and all matters related to academic misconduct, disciplinary appeals, grade appeals, financial aid, or other welldefined areas of faculty or staff responsibility. Moreover, grievances should not be confused with petitions related to academic issues, including deviation from academic requirements or policies. For more information, please refer to Sections 1-3 and 6 of AUB's Grievance Policy and Procedures

Other Policies

Student Representation on Faculty Committees

Student representation on the Hariri School of Nursing Committee is encouraged.

Students can request that items be put on any Hariri School of Nursing Committee agenda regarding graduate students. At the discretion of the Graduate Program convener or the Dean of the Hariri School of Nursing, this request may be granted. MSN students are represented on the Graduate Studies Committee and the Nursing Student Society.

Facility and Supervision Guidelines for Graduate Student Practice

The Faculty and students will discuss clinical or administrative placement and preceptors in preparation for the course where such training is expected. Any student may seek new learning experiences in facilities that are not currently used by the Hariri School of Nursing. In order to accomplish placement at a new clinical facility in a timely manner, the negotiations must begin early, (at least 8 weeks ahead of lead time is preferred). Student selection of clinical facilities and /or preceptors is under the supervision of the Graduate Faculty.

Students with Special Learning Needs

Students with disabilities applying to AUB are strongly encouraged to make their disability known to the Admission Office. This information will not affect the decision on admission;

rather, it will give the University the opportunity to offer specific assistance and support through programs and services provided by different departments on campus. AUB strives to make learning experiences accessible for all. If you anticipate or experience academic barriers due to a disability (such as ADHD, learning difficulties, mental health conditions, chronic or temporary medical conditions), please do not hesitate to inform the Accessible Education Office. In order to ensure that you receive the support you need and to facilitate a smooth accommodations process, you must register with the Accessible Education Office (AEO) as soon as possible: accessibility@aub.edu.lb; +961-1-350000, x3246; West Hall, Room 314

As old buildings are renovated and new ones built, wheelchair access ramps are being constructed. Some parking lots have been assigned and dedicated for special persons and they are located on different AUB sites. These areas are labeled for "Special Permit" holders. A room for the Visually Impaired is located in the West Hall.

Students Rights and Responsibilities

Students are members of the academic community and are also citizens. Students enjoy the same freedom of speech, peaceful assembly and right to petition. Students have the responsibility to know and obey the Lebanese Laws, as well as institutional regulations, policies and established guidelines as stated in this handbook. Students are accountable for their own behavior at all times.

Students have the right to freedom from discrimination on the basis of race, color, religion, sex, and age. Students have the right to be informed, in writing, of the expected behaviors and standards by which they will be evaluated prior to participating in clinical classrooms activities. Students have the right to academic evaluations that are not prejudiced and based on stated course requirements. As constituents of the academic community, students are free, individually or collectively, to voice constructive criticism through identified channels on issues such as curriculum, and matters of general interest to the student body without fear of reprisal.

While under the direct supervision of an instructor, students also have the right to adequate safety precautions provided by the Hariri School of Nursing. Students also have the right to negotiate participation in clinical situations which they feel are threatening to their personal health or life. Students, individually or collectively, have the right to expect, within a reasonable length of time, feedback concerning all student related issues presented to the faculty.

Freedom in Classroom

Students are responsible for learning the content of the courses in which they enroll, though they should be free to take reasoned exception to the data or views offered in any course of study, and reserve judgment about matters of opinion.

Students are responsible for complying with standards of academic performance required by each course in which they are enrolled as stipulated in the course syllabus. Such standards shall be communicated

clearly on or before the first meeting of each course. Students should have protection against prejudiced, arbitrary, and capricious academic evaluation.

Knowledge of student's views, beliefs and political associations acquired by the faculty members in the course of their work as instructors, advisers, and counselors are to be considered confidential.

Freedom of Inquiry and Expression

Students are free to examine and discuss questions and issues of interest to them, to express their opinions whether in public or in private. Such freedom does not, however, permit student groups to disrupt the orderly processes of the educational environment, nor does it permit the expression of ideas in ways which violate civil or criminal law, blatantly disregard the truth, threaten, demean, or libel others. In expressing their views, students should make clear that such views are not necessarily those of the University.

Getting in Touch with the Right People at the Rafic Hariri School of Nursing

Students are encouraged to communicate any concerns they might have to the appropriate persons. They can refer to the Student Services Officer for the following issues:

- Answering queries about the MSN program
- Student orientation and advising
- Follow up on graduate assistantships and scholarships available to nursing students
- Problems in registration (opening capacity, removing restrictions, resolving time conflict problems, removing holds, selection of elective courses, drop and add courses)
- Dealing with the administrative body (Registrar's office, Office of Financial Aid, Office of Student Affairs and specific committees at HSON)
- Writing and submitting petition letters (underload/overload credits, late registration, medical reports, course withdrawal, reactivation and readmission etc.)
- Selection of specific academic forms for internal and external procedures
- Program evaluation and satisfaction surveys
- Career guidance and work opportunities
- Student related activities such as student elections, NSS activities and graduation parties etc.
- Requesting credentials after graduation.

The Student services office seeks to assist and guide nursing students to develop their plan to academic success, by referring them to the appropriate resources and procedures, and ensuring that they are complying with AUB academic rules and regulations.

Issues related to a particular course are best discussed with the course coordinator. Problems with a student's academic progress should be followed up with the assigned academic adviser. Students may discuss issues related to a particular class with their advisers. If the student cannot resolve problems with the course coordinator or adviser, he/she should talk to the track

coordinator, and then the MSN convener. If necessary, issues are referred to the Dean of the School.

University Services

University Libraries

The AUB library system consists of two main libraries: the University Libraries and Saab Memorial Medical Library.

The University Libraries include the Jafet memorial Library as the Central Library, with two branch libraries: the Engineering and Architecture Library, and the Science and Agriculture Library with its annex AREC (Farm) Library.

Refer to http://www.aub.edu.lb/libraries/Pages/default.aspx for information about the libraries

The Saab Memorial Medical Library (SML) is dedicated to the Memory of Dr. Nicholas Saab (AUB School of Medicine graduate 1959) through a generous gift from his parents.

SML collection consists of 1,200 printed periodical subscriptions , over 82,320 backfile periodical volumes, nearly 42,000 books , over 2,000 of which are of historical value such as (Avicenna's "Cannon of Medicine," 1593, which has been digitized and published on the Web under http://ddc.aub.edu.lb/projects/saab/avicenna/index.html, and nearly 2300 audio-visual items, including computer software. SML has a large number of the most important bibliographic medical and allied health data bases, and more than 2,500 e- journals. SML has been automated since 1990 and is accessible through the internet at http://www.aub.edu.lb/libraries/medical. In 1978, SML was designated by WHO as the National Focal Point of Lebanon. The Library has a special collection called the Lebanese Corner, http://192.168.100.187/, which includes publications about Lebanon or by Lebanese authors in the fields of medicine and other health related topics.

With its rich, up-to-date medical collection, SML aims to promote research in the medical and allied health fields. SML is open 80 hours a week. Databases are currently accessible via library or home search via AUBs' website.

Office of Information Technology

The office of information technology (OIT) manages AUB and AUB Medical center's central information technology. The OIT manages the Student Information System (AUBsis) operated by the Registrar's; the Library Information System, Financial Information System; the Learning Management System (Moodle); and the integrated hospital information system operated by the hospital administration and departments. You can view the services provided by the IT organization by visiting: www.aub.edu.lb/it/.

Before using any of the services below, you must activate that specific computer accounts first.

AUBnet account: The AUB net account provides e-mail, intranet, and Internet access in addition to other services such as roaming storage space, network printing, and personal web site space. Students must activate their AUB net account first as it is required to activate other accounts.

AUBsis account: The AUB sis account provides access to the AUB student Information System, a web-based application designed to provide the following on-line self services to students and faculty over the intranet and the Internet: On-line Registration, Drop and Add, Class Schedules, Grades, Student Transcripts, Address Information, and Billing Statements.

Student computer labs, located in Agriculture, Bliss, Business, Engineering (Wing B), Fisk, Physics, Van Dyck, Diana Tamari Sabbagh buildings, as well as all Libraries and dorms are

used for instruction by the various departments and for personal use by the students. Many popular and PC software packages are available on the lab servers.

An Internet fee of LL60, 000 is charged every semester and will automatically be added to the statement of fees. The quota of Internet data per month per student is 100MB. This is a combined quota of web and e-mail data. Through the AUB Net Resources web site you can find out your Internet data usage for the month.

No limit exists on the time spent browsing and sending information on the web. The limit is only on the volume of data that is sent/ received in the process.

Access to AUB Computing Facilities

Access to computer hardware, software, intranet, and the Internet services is provided to members of the University for the primary purpose of enhancing the academic experience. Access to the use of AUB computer facilities is through authorized computer accounts. To be granted the use of a computer account, users must agree to abide by the AUBnet Code of Conduct for Users of Computing System and Internet Services.

A computer account consists of a unique log-in ID and a password. You identify yourself to the computer system when you log in. Your log-in ID tells the computer who you are.

Like the PIN on your bank ATM card, your password is the key to your account. You must always keep your password secret.

To activate your AUB computing accounts go to http://website.aub.edu.lb/it/Pages/index.aspxthen click on account creation and management and follow instructions..

Available facilities:

- **Intranet and Internet Services**
  IT provides a wired and wireless network infrastructure ensuring secure, reliable and widespread access for AUB users across the entire campus and hospital, including all dorms and faculty apartments. AUB students can connect to the AUB network from public computer labs or personal laptops and mobile devices via the campus-wide

wireless network using any web browser. Students can access many web enhanced courses and online material that they are registered in.

With an AUBnet account, all students, faculty and staff have full access to Internet, email, personal websites and other services such as network printers, intranet applications and the High Performance Computing (HPC) system.

AUB also offers the Eduroam service that allows students, faculty and staff to access the Internet from other universities around the globe, which are members of the Eduroam network, using their AUBnet account.

- **Computer Labs**
  There are several computer labs on campus which provide access to the Internet and a variety of other resources (such as printers) and applications (such as SPSS).
  Students may also request access to servers hosting applications such as Microsoft Office, special software for statistics and graphics, and various programming languages.
- **Microsoft Office**
  All current students can download the Microsoft Office 365 suite of applications on up to 10 devices (5 laptops and 5 mobile devices) free of charge. For more details, visit www.aub.edu.lb/it/.
- **Mobile App**
  AUB offers a mobile app that allows students to check course holds, grades, schedule, deadlines, academic calendar as well as program offerings. The mobile application also facilitates search for library books and articles as well as access to e-learning (Moodle), Instructor Course Evaluation (ICE) and the latest issue of MainGate.
- **IT Help Desk**
  Friendly and knowledgeable IT help desk specialists are always ready to support students, faculty and staff. For IT-related support, contact the IT help desk by email at it.helpdesk@aub.edu.lb, dial ext. 2260, or visit one of the many IT support locations on campus in person anytime Monday-Friday 8:00am-5:00pm (7:30am-3:00pm during summer hours).
  For more information, visit our website: www.aub.edu.lb/it.

Graduate Student E-mail Address

The University makes extensive use of electronic mail for communication and to keep in touch with students. To ensure that students receive timely communication and important announcements, the student's current email address must always be on file in the Hariri School of Nursing. Every graduate student is provided with an AUB Computer Account, which includes e-mail. It is strongly recommended that all graduate students use their AUB e-mail address as their primary one for the duration of the time they are studying here. This will help to prevent students missing announcements or other important communication from faculty and staff.

Bookstore

The University Bookstore is located at the back of Bliss Hall across from Penrose Hall. It stocks most of the required textbooks for specific courses, dictionaries, and other reference works, and a limited number of general publications. Assorted AUB items and gifts such as clocks, mugs, diploma, and picture frames, T-shirts, and binders are also on sale.

The Writing Center

For students who need assistance in writing papers or projects, the AUB writing center located in West Hall Room 307 provides assistance. Tutors from the Department of English are available Monday through Friday 9 am – 3 pm and consulting services are free. The extension to call for taking appointments is 3157.

University Health Services

Medical Records

An entrance medical record form will be sent to all admitted students who have made the commitment to enroll at AUB. It is to be completed by the student's family physician and mailed as soon as possible and before the period of registration in a pre-addressed envelope AUB provides. Alternatively the completed medical record form may be delivered by hand to the Office of Admissions.

All new students must have a tuberculin test at the time of the preliminary medical check, held during registration, and must report 48 hours later for the check on the test. Upon clearing the medical test, the student will be issued a clearance slip to proceed with registration. Students will not be registered unless they obtain this clearance slip. Students who report late for the medical check will be charged a late fee.

Medical checkups may be completed in advance of registration, provided that the student reports to the University Health Services on Campus and brings along a letter of acceptance and the entrance medical record.

Returning students are not required to complete any medical forms. Important changes in the student's medical condition and/or updating immunizations should be reported to a University Physician by appointment at the Health Services Center early in the first semester. Information will be kept confidential.

Health Insurance Plan (HIP)

The University Health Services (UHS) on campus provide medical care to members of the university community at large. Patients are seen Monday through Friday 8 am to noon and 1 to 4 pm in the Gulbenkian Infirmary located in the Sawwaf Building facing the Children Cancer Center in Lebanon. Appointments can be made at the reception desk in advance, either in person or by telephone between 8:30 and 4 pm. A physician is also available to receive patients on a walk-in basis. Such patients must have problems of an urgent nature; otherwise, they will be given return appointments for a later time. In case of emergency, the patient should report directly to the Emergency Unit at the Medical Center or to the nearest Emergency service or Physician.

Students may elect to enroll in the University's Health Insurance Plan (HIP, provided they register for at least six credit hours. Auditors are not considered students. A graduate student registered for a thesis is eligible to continue the HIP coverage for two consecutive years only. Regular students enrolling For twelve months beginning with October registration , pay 514,000 L.L. .
For one semester and summer session beginning with February registration , pay 386.000 L.L.
Students enrolled in the Spring Semester are covered through the summer until September 30, provided they do not leave the University or drop all their courses.

A married student will have the option of including spouse and children at additional fees as outlined in the regulations for the Health Insurance Plan. A student may be exempt from enrolling in the HIP if he/she presents proof of coverage by another health insurance plan.

HIP covers expenses incurred at AUB Medical Center exclusively. Medical bills from other institutions are not covered.

NSSF fee per student per year is 202.500 L.L.

National Social Security Fund (NSSF) Medical Branch

Membership in the NSSF is mandatory by Law for all Lebanese students excluding freshman and special students, and students who are older than 30 years. Non-Lebanese students may not join. To facilitate enrollment in the NSSF Medical Branch, students are required to bring the following items when registering:

- A social security application form filled correctly. Copies of this form will be available for distribution at the time of registration to students who have not completed it.
- A photocopy of their Lebanese Identity Card.
- Their NSSF number if already registered.
- The NSSF number of either parent if insured with the NSSF through father or mother.
- Family record is required of married students only.

Extra-Curricular Services

Nursing Student Society

The Nursing Student Society (NSS) brings together nursing students from all levels to engage in various professional and social activities, under the guidance of an assigned faculty advisor. Objectives of the NSS are to:

- Serve as an organization through which matters related to the welfare of students and the school is transacted.
- Provide a channel for coordination of activities between the students and faculty members, and with other student organizations.
- Organize activities that promote a spirit of loyalty and fellowship among the student body.
- Provide means for active participation in activities that foster the personal, professional and civic development of students.

The NSS has three standing committees:

1. The Educational Committee organizes educational programs of interest to the community.
2. The Social Committee is responsible for social and recreational activities.
3. The Publicity and Finance Committee is responsible for publicity and financial matters.

Clubs and Societies

Opportunities for students to participate in extra-curricular activities, generally organized under the auspices of student-governed societies or clubs are numerous. Membership is open to all registered students upon completion of an application and payment of a nominal fee. For further information or to obtain a list of active Clubs and Societies, go to the Department of Student Activities in the West Hall, extension 3182, or AUB Catalogue.

Athletics and Recreation

The University offers a wide range of sports, athletic and recreational programs through its Athletics Department. Facilities include AUB's Green Field, which hosts international, national, and varsity sports tournament. The Green Field includes the University's soccer field, light outdoor basketball courts, lighted outdoor volleyball courts and a lighted 450-meter track, in addition to the Charles W. Hostler center.

Student Housing

AUB is a residential University in the American liberal arts tradition. It was the first and still is one of the few residential universities in the Middle East offering a beautiful Campus where a rich extra-curricular

and community life flourishes. Life in the AUB residence system offers a high degree of reliability. Dorm life in AUB establishes strong, supportive communities. For extra details, check AUB catalog.

Student Transportation

AUB allows limited automobile access to campus. Only students suffering from illness or disabilities may bring cars on campus. Authorization from Infirmary must be received before a permit can be issued, and then the student can contact Business Services at extension 3510 for a special permit.

Passports and Visas

Foreign students joining AUB must have passports valid for a period of not less than 13 months from the date of joining the University. They should also secure an entry visa to Lebanon from the nearest Lebanese Embassy or Consulate in their country. The Office of Students Affairs, in coordination with Personnel, the Office of Admissions, and the Office of Registrar, will help provide the necessary certificates for registered foreign students to acquire residence permits from the Lebanese authorities.

Mail Service

The University Post Office, located in the basement of Ada Dodge Hall, handles local campus mail and mail for the Lebanese postal services. To secure a campus mailbox a student must show a receipt of fee payment at the AUB Post Office.
Urgent mail may be sent by Aramex through the AUB Post Office. A special rate is offered to the AUB community. Also DHL offers special rates at the AUB Bookstore.

Food Service

The University operates a modern, cafeteria-style food service on the Campus in Ada Dodge Hall. Students have the option of using these food service facilities or eating elsewhere. In addition to the main cafeteria the University also maintains the Mary Dodge Hall Cafeteria, the Engineering Cafeteria, and the Agriculture Kiosk. These facilities provide a variety of hot and cold refreshments for students and their guests. Vending machines are available in a

number of University buildings and at the beach tunnel. You can also ty the Coffee Shop on the first floor of AUBMC, the hospital cafeteria or Lavazza café on the hospital's second floor.

APPENDIX B

GUIDELINES FOR THE MSN COMPREHENSIVE EXAM

A. To complete requirements for the Master of Science in Nursing, students must pass a comprehensive examination. To be eligible to take the examination, the student should have:
    a. Completed all core courses and most specialty courses.
    b. Be in good graduate standing.
    c. Met with his/her adviser to determine eligibility.

B. The comprehensive examination process:

    a. The examination will be taken after most of the course work is finished. Students are advised to take the comprehensive examination as early as possible, before beginning their thesis or project.

    b. There will be three examination questions which will be based on content from the MSN core courses (Foundations of Advanced Practice; Nursing Research); and the Area of Specialty.

    c. Two faculty members will read and grade each question blindly.

    d. A final grade of Pass is required to pass the exam. The grade of Pass will be given if the student passes all three questions.

    e. Criteria for grading will be based on knowledge of content, as well as evidence of critical and analytical thinking. The desired learning outcome is the synthesis and application of knowledge of advanced nursing practice.

    f. Students who receive PR (i.e. Unsatisfactory) on the examination may take it a second time after a period of at least three months.

Research Interests: My main area of research interest is related to nursing workforce issues such as migration, retention, work environment, sickness absence, and continuing nursing education. My aspiration is to extend my research specifically the one related to nursing workforce issues of sickness absence and continuing education regionally after my experience in nation-wide investigations and a humble regional study utilizing multi-center sites and where appropriate interdisciplinary research teams.

Ongoing Research:

- Exploring Continuing Education Learning Needs of Nurse Managers in Lebanon
- Assessing Basic and Continuing Education Learning Needs of Nurses in Lebanon
- REfugees Act and Communicate for Health (REACH): Using Technology to Increase Health Literacy and Health Care Access for Refugees in Turkey and Lebanon
- Perspectives of Registered Nurses On Refugee Healthcare In Lebanon and Jordan: A multi-site cross-sectional study (PROfILE)

Gladys Honein-Abu Haidar, RN, MPH, PhD
Assistant Professor, Community Health Services Research
Room 520
Extension: 5977
E-mail: gh30@aub.edu.lb

Research Interest: A multi-phase implementation research project aiming to assess, empower and evaluate the capacity of community health nurses in implementing the core competencies of a primary health care nurse. An assessment has been conducted to describe the baseline status of current knowledge and application of eight competencies of a primary health care nurse. This was followed by an assessment of the challenges and opportunities facing nurses working in the community. Consequently, a capacity building training focusing on empowering nurses with practical knowledge on mastering those competencies is underway.
In addition, I am pursuing a research trajectory focusing on colorectal cancer screening, participation, facilitators and barriers, and intervention studies to increase screening participation.
I also collaborate with colleagues from the faculty of agriculture and food sciences on matters that influence food security among Syrian refugees living in Lebanon.
Finally, I provide qualitative methodology consultation for various faculty at AUB-MC and other Lebanese universities related to their research of interests.

Ongoing Research

Colorectal cancer screening studies:

- Perceived Factors Influencing Participation in Fecal Immunochemical Screening Test for Colorectal Cancer among the Lebanese Population
- Towards an Organized Colorectal Cancer Screening Program: An Action-oriented Research

Community & Primary health care studies:

- Towards a Family - Practice Based Primary Care in Eastern Mediterranean Region: Roles and Functions of Nursing and Midwifery Workforce.
- Community Health Assessment of Needs and Continuous Empowerment (CHANCE) - An experience-based co-design approach
- Patients' Perceptions of Nurses and Physicians' Listening Behaviors, Education, and Empathy
- The role of an advanced practice nurse in coaching pediatric congenital heart disease patients transitioning into young adulthood: a systematic review of the literature.
- Psychological well-being in overweight and obese adolescents in Lebanese schools: A cross-sectional study
- Kickbacks between physicians and healthcare facilities
- Perceptions of Complementary and Alternative Medicine (CAM) among users, providers and health care workers in Lebanon
- Reduce, Recover, Recycle (3 Rs)- Food Waste Management Initiative. Water- Energy-Food- Health Nexus Renewable Resources Initiative: WEFRAH

Refugee health studies:

- SEEK Trial: The effect of increased Self- Efficacy and Knowledge (using an innovative psychosocial SRH package) on sexual and reproductive health service use among young refugee women and adolescents

Collaborative studies:

- The Do-Not-Resuscitate (DNR) Order: A cultural view

Angela Massouh, PhD, CNS
Assistant Professor | Adult and Critical Care | School of Nursing, American University of Beirut
Cardiology Clinical Nurse Specialist | American University of Beirut Medical Center
President | Chi Iota Chapter of the Sigma Theta Tau International
HSON Room 411-C
Extension: 5966
E-mail: am50@aub.du.lb

Research interests: Self-Care in Heart Failure: Determinants of Self-Care in Lebanon; Caregiver Engagement in Self-care; Lived Experiences of Patients and Caregivers Living with Ventricular Assist Devices; Symptom Perception; Symptom Experience; Chronic Disease Management.

Current Research projects

- Dyad Engagment in Heart Failure Self-Care: Principal Investigator and the study is in the **Data Collection phase**
- REflective Simulation-Based e-Training on Motivational Interviewing for interprofessional Teams: Principal Investigator and the study is in the **IRB preparation phase**
- Appraisal, Burnout, and Coping in Informal Caregivers of Patients Living with Chronic Illness: The ABCs of Caregiving: Principal Investigator and the study is in the **IRB preparation phase**
- A survey of the knowledge, attitudes, and practices of physicians related to air pollution: Co-Investigator and the study is in the **Data Collection phase**
- Creating a Heart Failure Database [HF-Log] at the American University of Beirut Medical Center: Co-Investigator and the study is in the **Data Collection phase**
- Prevalence of Elevated Heart Rate Among In-Hospital Oncology Patients: Co-Investigator and the study is in the **manuscript writing phase**

Samar Noureddine, PhD, RN, FAHA, FAAN
Professor
Cardiopulmonary Nursing
HSON Room 512
Extension: 5966
E-mail: sn00@aub.edu.lb

Research interests: Health behaviors; cardiovascular risk reduction, management of the chronically ill, cardiopulmonary resuscitation practices

Ongoing Research:

- Symptom Measurement in Patients with Arrhythmias
- Study of the health status, health behaviors, and related work conditions of working Nurses in Lebanon.
- Cardiovascular risk and related factors in Lebanese women
- Knowledge, attitude and practices of physicians related to air pollution
- Survey of the Knowledge, Attitude and Practices related to out of hospital Resuscitation among Nurses in Lebanon.

WELCOME

Welcome to the Rafic Hariri Hariri School of Nursing (HSON). We are delighted that you have chosen to study nursing at AUB and look forward to meeting each one of you. This is an exciting time for nursing—both at AUB and throughout the world.

In the field of nursing generally, nurses are taking on new and greater responsibilities. Although taking care of patients is still our primary responsibility, we are also playing a role in setting health care policy at the national, regional, and international levels and researching important health care issues.

Here at AUB, we celebrated our 100th anniversary in 2005 and our 110th anniversary in 2015. We have introduced new programs and are constantly updating and revising our curriculum. Our graduates are in great demand and they are occupying leadership positions in different countries in the world. In 2007 the BSN and MSN programs were granted unconditional accreditation by the Commission on Collegiate Nursing Education (CCNE) in the USA for five years and in 2012 the programs were reaccredited for a period of 10 years. AUB Hariri School of Nursing is the first school to be accredited by CCNE outside the USA. In 2008 the HSON received a $10M gift to endow the school and the building and in 2009 the Rafic Hariri School of Nursing building was inaugurated. The building houses faculty offices,

classrooms, an auditorium, a computer lab, skills and simulation lab, a research center, and student facilities.

In 2015, HSON won three major regional awards; HSON received the best institution award, Dr. Huda Huijer the distinguished researcher award, and an MSN graduate the best thesis award. The Chi Iota Honor Society Chapter, the first in the region, was formally chartered by Sigma Theta Tau International (STTI) in 2015 and 131 members were inducted into this prestigious honor society. In 2017, the PhD in Nursing Science program was fully approved to be formally launched in 2018-19. In 2018, AUB granted HSON independent Faculty status and appointed Dr. Huijer as founding dean of the school. We continue to be proud of these accomplishments and we look forward to working with you to celebrate these achievements. We hope this handbook will be a useful guide for you especially during the first couple of weeks when everything is so unfamiliar. If, however, you are lost or need help, please come and find us. We are eager to do whatever we can to make this a positive and rewarding experience for you.

We also welcome any comments or suggestions you may have on how we might change and improve on this handbook in order to make it more helpful for future Hariri School of Nursing students.

Good luck!

Dr. Huda Abu-Saad Huijer, RN, PhD, FEANS, FAAN
Dean, Hariri School of Nursing

Preface

This handbook has been prepared for graduate students in order to provide detailed information about the Master of Science in Nursing Program at the American University of Beirut. Guidelines and policy statements are given to assist in clarifying the process from entry to the program through graduation.

The MSN program in the Hariri School of Nursing was launched Fall 2003-2004. The curriculum with emphasis on Advanced Nursing Practice provides educational opportunities for nurses seeking further specialization.

The faculty and administration of the Hariri School of Nursing hope that the educational process at the American university of Beirut will be a rewarding and challenging experience for each student. We pledge ourselves to assist students in the pursuit of their professional and educational goals.

In addition to the policies found here that are specific to the Graduate Program at the Hariri School of Nursing, the student should obtain and keep a copy of the AUB Graduate Catalogue, which contains policies and procedures that apply to all graduate programs in the University.

The American University of Beirut

The American University of Beirut (AUB) is a private, non-sectarian institution of higher learning, founded in 1866. It functions under a charter from the State of New York and is administered by a private, autonomous Board of Trustees.

The University has five faculties: Arts and Sciences, Medicine-including the Hariri School of Nursing, Engineering and Architecture, Agricultural and Food Sciences, and Health Sciences. In addition to these faculties, the University has a School of Business. At present, AUB offers programs leading to both bachelor's, master's degrees and a number of PhD programs in some Arts and Science and Engineering majors. The University is co-educational. The language of instruction is English.

AUB is a teaching-centered research university, where excellence in teaching and research go hand-in-hand. Its mission is to enhance education, primarily the education of the peoples of the Middle East, to serve society through its educational functions, and to participate in the advancement of knowledge. AUB bases its educational perspective and methods, and its academic organization on the American model of higher education.

The university emphasizes scholarship that enables students to think for themselves, stresses academic excellence, and promotes high principles of character. It aims to produce men and women who are not only technically competent in their professional fields but also life-long learners who have breadth of vision, a sense of civic and moral responsibility, and devotion to the fundamental values of human life. The University believes in and encourages freedom of thought and expression. It expects, however, that this freedom will be enjoyed in a spirit of integrity and with full sense of responsibility.

General Information about the MSN Program

The Hariri School of Nursing at AUB offers the Degree of *Master of Science in Nursing* (MSN) with emphasis on Advanced Nursing Practice. Four tracks are available: Adult-Gerontology Clinical Nurse Specialist with optional minor in Nursing Education, Psychiatric Mental Health Clinical Nurse Specialist with optional minor in Nursing Education, Community and Public Health Nursing with optional minor in Nursing Education, and Nursing Administration and Management. This MSN program is designed to meet the health challenges of the 21st century in Lebanon and the region, and prepare students for continued studies towards PhD degrees. The clinical tracks prepare graduates as clinical nurse specialists.

The Hariri School of Nursing faculty members are renowned for their research, clinical expertise, innovative teaching strategies, and contribution to professional practice at the national level.

Mission Statement

The mission of the Hariri School of Nursing is to promote and maintain the highest educational standards of excellence, integrity, and professionalism in nursing, following the American model of nursing education and practice. The school aims to provide learning opportunities that will enable students to develop into competent nurses who respect cultural diversity while coordinating and delivering high–quality, compassionate nursing care in Lebanon and beyond, guided by ethical principles. The faculty believes education is an interactive process between faculty and students with both taking responsibility for active learning. The baccalaureate program, drawn primarily from the humanities, sciences, and caring disciplines, focuses on the use of nursing theory and research as a basis for practice. The master's program focuses on preparing nurses for advanced nursing practice roles. It is based on the use and generation of research-based knowledge to guide practice. Nursing students at AUB learn to think critically, develop professional attitudes and leadership skills, and appreciate the value of life-long learning and freedom of speech.

Philosophy

The Master of Science in Nursing Program is consistent with the philosophy of the American University of Beirut and the mission of the Hariri School of Nursing, and builds upon the knowledge and competencies that characterize the undergraduate program. Graduate education denotes the critical appraisal of concepts and theories basic to the Nursing discipline. The unifying focus in graduate education is specialized and research-directed

nursing practice. Graduate education promotes the process of inquiry for the expansion and testing of knowledge; and fosters creativity, critical thinking, professional development, research**,** and leadership skills.

Learning Outcomes

The program provides students with a thorough understanding of the theoretical basis of practice and also incorporates managerial, administrative and educational skills. The graduate is expected to be an expert clinician, an informed educator, a knowledgeable researcher and a skilled manager.

Specifically, the MSN program will prepare nurses who:

1. Integrate theory and research in nursing and related disciplines as basis for advanced nursing practice and role development.
2. Participate in conducting research within collaborative teams to improve care outcomes and support policy changes
3. Deliver advanced practice nursing based on critical thinking, research evidence, and advanced knowledge and skills in specialized area of nursing.

4. Demonstrate advanced clinical and data driven decision-making across health care settings.
5. Analyze the impact of socio-cultural, economic, ethical, legal and political issues on nursing practice, health promotion strategies and health care delivery.
6. Assume leadership roles in education and management, utilizing inter-and intra-disciplinary approaches and systems thinking.
7. Analyze current and emerging technologies to optimize patient safety, cost-effective care, and quality and health outcomes'.

Admission to the MSN program

A student is eligible for consideration for admission to the MSN program if s/he fulfills AUB admission requirements for graduate studies. The criteria for admission to the MSN program are:

1. Meeting all the university admission requirements to graduate studies.
2. Having a BSN degree or its equivalent from an accredited/recognized institution.
3. Having a cumulative undergraduate average of at least 75, with an undergraduate average of at least 80 in the major Nursing.
4. Demonstrating evidence of knowledge and competence in physical assessment skills (for the clinical tracks).
5. Satisfactory scores on the English Entrance Exam or Test of English as a Foreign Language, as per AUB requirements for graduate studies.
6. License to practice nursing from country of residence.
7. One year work experience in nursing.

Categories of Admission

Applicants for graduate study may be considered for admission in one of the following categories:

Graduate Regular
A candidate qualifies for this category if s/he holds a bachelor's degree from AUB or an equivalent degree from another recognized institution with an undergraduate average of at least 80 or its equivalent in nursing.

Graduate on probation
Candidates who fail to meet any of the admission requirements but who, in the opinion of the faculty, demonstrate potential for graduate study, are admitted as 'graduates on probation.' Students with a cumulative undergraduate average of at least 75 but less than 80 in the major field (nursing) may be conditionally admitted as graduate student on probation. These students should score 80 or above in the first nine graduate credits in order to be transferred from special status to regular status.

Readiness for University Studies in English (RUSE)

Upon admission to AUB and prior to registration, students admitted to AUB must demonstrate a level of English proficiency consistent with the demands of a program carried out almost exclusively in the English language. This should be done as early as possible (in general, no later than 1 month prior to the start of the semester) by submitting official test scores for (at least) one of the following tests listed in the below RUSE tables for undergraduate or graduate admissions. Students joining AUB at the undergraduate level should reference the "Undergraduate RUSE" table while students joining AUB at the graduate level should reference the "Graduate RUSE" table.
Please note that some applicants might be exempted from the RUSE requirements; such exemptions are listed in the "RUSE Exemption" table at the end of this page.

Graduate RUSE: Applicable to students joining AUB at the graduate level

Exam **English Course Placement**	**NEW AUB EEE (After Jan 2017)**	**AUB EEE (English Entrance Exam)**	**TOEFL (PBT)**	**TOEFL (IBT)**	**IELTS (Academic)**	**GRE (Verbal)**	**GMAT (Verbal)**
Exam Validity	***1year***	***1year***	***2years***	***2years***	***2years***	***5years***	***5years***
No English courses	>=40	>=530	>= 583	>= 97	7.0	>= 147	>= 25
English 300	32-39	500-529	573-582	88-96			
Intensive English 100A/100B (If faculty approves)	25-31	375-499	490-570	57-87			
Summer Preparatory English Program (UPGR 001)	Graduate candidates who have not met the English language requirements or who have not yet taken any English test, have the option of registering in a 7-week intensive English summer preparatory program. You may check the program details (Description, Learning Outcomes, Requirements, Course Registration and Timeline) at the University Preparatory Program (UPP) - Graduate Course site.						

Transfer of Credits

Transfer of Credits from One Master's Degree to Another Graduate courses taken at AUB (or at other recognized institutions), in which the applicant earned an equivalent grade of 80 or above, may be transferred to another master's degree at AUB. No more than 9 credits are transferable provided they are not credits earned by an internship, thesis or practicum, and degree minimum residency requirement is maintained. Approval by the department or the academic unit concerned and the Faculty/School Graduate Studies Committee is required for all transfers. Normally, credits counted toward another graduate degree at AUB or another institution cannot be transferred if they have already been used to satisfy requirements for another awarded graduate degree.

Graduate Council

The Graduate Council (GC) reports to the Provost of the University and plays a vital role in implementing the rules and regulations governing graduate work uniformly across the University, in accordance with policies approved by the Board of Graduate Studies (BGS) and the Senate, and as recommended by the faculties and schools. The Graduate Council facilitates and coordinates graduate education and follows up on the implementation of graduate policies and deadlines. The Graduate Council works closely with the BGS and Faculty Graduate Studies Committees to provide mechanisms for the quality control of all aspects of graduate education. In cooperation with faculty, students, and staff, the Graduate Council undertakes preparatory steps and coordinates graduate recruitment programs to ensure a selection process from a highly qualified pool of student applicants; provides information about admissions to all graduate programs; administers graduate standards of scholarship and policy; and encourages the development and success of students through workshops, training activities, counseling, and initiatives that promote timely degree completion. The Graduate Council also administers AUB policies concerning graduate assistantship appointments.

Registration

Academic Year

The academic year at AUB includes two semesters, fall, and spring, followed by a summer session. Each semester has a reading period and a final exam week. For the exact dates, see the AUB Calendar.

Orientation

All entering students attend the three –day orientation program consisting of meetings in Faculties and Departments; meetings with representatives of various university services; tours of the campus; Agriculture Research and Educational Center (AREC), and the country; and acquaintance social events.

Course Registration

New students register on-line via the Internet during August/September at a date indicated at the University Registrar for the fall semester of an academic year.
Check details of on-line registration under Course Registration for New Students and Consult the Registration Guide available in the Office of the Registrar.
Continuing students will register before the end of each semester for the upcoming academic semester. The registrar announces all registration dates.

Deferred Registration

Graduate students who are offered admission in the Fall semester and who do not register for that semester may be eligible for admission to the following Fall semester of the, pending availability of places. A petition should be submitted to the Office of Admissions.

Late Registration

Students unable, for some unforeseen reason, to register at the scheduled time may attempt late registration. A late registration fee of LL150, 000 for students will be charged late registration is to be avoided, as many courses may become full.

Drop and Add

After the start of classes, at a date indicated in the University Registrar, students may make changes in their schedules through a process known as Drop and Add. After obtaining the approval of their advisers, students may make changes in their courses on the web according to a pre-announced schedule. They may need to settle their accounts at the Office of the Comptroller.

Fees and Expenses

The American University of Beirut is a non-profit institution. The charge to students is kept at the minimum consistent with the provision of high quality instruction and adequate resources. The University reserves the right to change any or all fees at any time without prior notice. Such changes will be applicable to students currently registered in the university as well as to new students.
Students will not be permitted to enter classes at the beginning of the term until their fees are paid or special arrangements have been made with the university comptroller. All fees are quoted in Lebanese pounds and US dollars.

Payment of Fees

Each AUB student must pay all his/her tuition fees and other charges levied.

1. All students must finalize registration, including payment of tuition fees and other charges according to the academic calendar for the first and second semesters. Under special circumstances, late registration will be permitted during a period of no more than five working days after the announced deadline, but subject to a late registration fee.
2. Students who demonstrate financial need may make formal application for deferred payment arrangements for tuition fees only to the Office of the Comptroller according to the academic calendar for the first and second semesters. No applications for deferrals will be accepted thereafter. Deferred payments are not a right and will only be agreed to under specific and special circumstances. Students who arrange for deferred payments are still required to complete all registration formalities within the set deadlines. Deferred payment arrangements are not permitted for the summer session in any faculty.
3. A graduate student who applies for deferred payment must pay at least 50% of the net amount of tuition due. All other charges must be paid in full with no deferrals. A student must pay a deferred payment application fee of $33, whether approved or not.
4. Should the student's application be approved, the student must pay the balance, plus a deferred application fee of $33, together with the late payment fee, if applicable. All the above arrangements must be concluded by the announced deadlines.
5. Every student granted deferred payment must sign a statement indicating agreement that failure to complete payment by the set deadline will result in receiving no credit for the semester in which the student has defaulted on payment.

Students are expected to meet all financial obligations by the appropriate due date. The university reserves the right to place an encumbrance on the student's record, which will prevent registration for future semesters and the release of transcripts and diplomas, as well as access to other university services by any student who fails to promptly meet his/her financial obligations to the university. It is each student's responsibility to be informed of all registration and payment dates and deadlines.
Up-to-date schedules for registration and payment of fees may be obtained from the Office of the Registrar (ext: 2570 /2571), or at the e-mail address: registrar@aub.edu.lb

Academic Rules and Regulations

Categories of Students

To be considered a full-time student, a student must carry a minimum load of 9 credits per semester. For summer full-time, the required load is 6 credits. Students can normally register for up to 12 credits per semester and 6 credits during the summer session. The category of part-time students applies to those carrying less than 9 credits per regular semester or less than 6 credits for the summer.

Supervision

Each student has an academic adviser who must approve the student's schedule each semester. The student's adviser is appointed by the graduate faculty of the school. These advisers will maintain their relationship with the students until they graduate from the graduate program.
Every academic adviser is expected to guide and help in planning the student's course of study. Not all courses need to be in nursing, but they should be in the judgment of the department relevant to the field in which the student is specializing. For students working towards a thesis, a thesis adviser is assigned who must be a full-time faculty member and will serve as chairperson of the thesis committee. The thesis adviser and the members of the thesis committee should be of professorial rank.

Attendance

- Students are expected to attend all classes, laboratories and any required activities. Absence of students, whether excused or not, from any class or laboratory session does not excuse them from their responsibility for the work done or for any announcements made during their absence.
- Students who absent themselves during a semester more than ***one third*** of the number of hours of any course lose all credit for the course.
- Students may *not* be excused from laboratory and field requirements. All missed clinical and field requirements must be made up. In case of repeated absences from clinical courses, ***over one third of the total hours***, the student may be asked to drop the course.
- Students who fail to sit for scheduled examinations, or fail to fulfill course requirements, will be given the minimum grade for graduate courses, which is 55. Results of tutorial courses, clinical and administrative residencies, projects, or theses will be reported as pass (P) or fail (F).

Examinations and Quizzes

Students may not absent themselves from announced final examinations and quizzes unless they present an excuse considered valid by the coordinator of the course. The course coordinator may then require the student to take a make-up examination.

Computer Literacy

Masters students are expected to have a basic level of computer literacy. Ability to use Microsoft Word, Power Point and spread sheets software is a minimum requirement, since most courses require term papers and oral presentations. For students who are weak in this area, a number of workshops on the use of various computer programs are offered regularly by the Academic Computing Center, accessible through AUB website, or by calling 2260 or 3580. Students must also know how to do electronic literature searches using databases such as MEDLINE and CINHAL. The Saab Medical librarian offers regular sessions Mondays at 6 pm, or per request about searching the literature. Call Miss Aida Farha at 5911 for further questions.

RCR Requirement

The Responsible Conduct of Research (RCR) Requirement must be completed by all newly admitted degree seeking graduate students, both at the Master's and PhD levels. The requirement includes prospective graduates and graduates admitted on probation.

The requirement is fulfilled by in the RCR course section determined by the student's respective Faculty and department/program. RCR courses "cover core norms, principles, regulations, and rules governing the practice of research." Topics include research misconduct, data management, authorship, peer review, mentoring, using animal subjects in research, conflicts of interest, collaborative research, and research involving human subjects. Additional topics may be included according to research discipline.
The requirement must be fulfilled within the first month and is marked by a passing grade. Failure to fulfill the requirement in a timely manner results in a registration hold that is removed once the student has fulfilled the requirement.

Courses and Grades

Courses taken as part of a student's graduate study program fall in one of two categories: graduate or prerequisite, with different grading systems.

- *Graduate Level Courses*
  Graduate level courses in Nursing are numbered 500 and above. The minimum passing grade for a graduate course is 70. However, students are required to maintain a cumulative average of at least 80 in all courses taken for graduate credit. Projects, thesis and residency courses are graded as Pass/Fail.

- *Prerequisite Courses*
  These are usually undergraduate courses taken to make up for any deficiencies in the student's background. They do not carry graduate credit. The minimum passing grade for a prerequisite course is 70.

Grading System

Evaluation of the student's achievement will include their work in theory, practice, as well as professional attitudes and behavior.

In the Hariri School of Nursing the following grading system is used:

Cumulative Average	GPA	Cumulative Average	GPA	Cumulative Average	GPA	Cumulative Average	GPA
‹60	0	67	1.86	75	2.73	83	3.46
60	1	68	1.98	76	2.82	84	3.54
61	1.13	69	2.09	77	2.92	85	3.63
62	1.26	70	2.2	78	3.02	86	3.7
63	1.38	71	2.31	79	3.11	87	3.78
64	1.5	72	2.42	80	3.2	88	3.86
65	1.63	73	2.52	81	3.29	89	3.93
66	1.74	74	2.62	82	3.38	›=90	4
I Incomplete							
P Pass Normally Used for Theses and Projects							
PR In Progress							
W Withdraw							
F Fail							

All final grades are expressed in multiples of one.

Incomplete Grades

A student who has an incomplete on one course must complete the work required for the course within one month of the start of the next regular semester. In exceptional circumstances the graduate committee may decide to give the student additional time to complete the course.
Incomplete course work will be reported as "I" that is followed by a numerical grade reflecting the evaluation of the student available at the end of the semester. This evaluation is based on a grade of zero on all missed work and should be reported in units of five. If the work is not completed within the period specified, the "I" is dropped and the numerical grade becomes the final grade.
Probation and Dismissal

A student working towards a master's degree in Nursing "MSN" may be placed on probation by the Hariri School of Nursing Graduate Committee if he/she:

- Is admitted to graduate study on probation,
- Fails in any course taken for graduate credit, and

- Does not maintain the required cumulative average of 80.

The probation may be removed upon the recommendation of the Graduate Studies Committee of the School if the student has completed a minimum of 9 credits of graduate level courses within the two consecutive semesters after being placed on probation, has passed all courses, and has obtained the cumulative average of 80. If the student fails to meet any of these conditions, s/he will be dropped from the program.

The Graduate Studies Committee may discontinue a master's student from graduate study if:

- Probation status is not removed within a period of two semesters in which the courses that are taken are for credit, or
- In the opinion of the department, and irrespective of the grades obtained, the work of the student is deemed unsatisfactory, or
- The student fails the comprehensive examination twice, or fails the thesis defense twice.

Leave of Absence

- All graduate students are expected to make steady and satisfactory progress toward the completion of degrees. Students who are not enrolled for a period of more than one academic year (two consecutive regular terms and one summer) will be considered to have withdrawn from the program unless they apply for a leave of absence and secure approval of the department, School Graduate Studies Committee, and Graduate Council.

- The leave of absence application can be up to one academic year at a time. The maximum period of approved leave of absence is for two academic years. An approved leave of absence does not count towards maximum residency. Non-enrollment by the student for one semester without securing leave of absence will count towards maximum residency.

- Students who seek to return without having secured leave of absence approval after a non-enrolment period of 12 months must reapply and will be considered for readmission following regular AUB application/admission procedures. If re-admitted into the same graduate program, then their earlier status as graduate student will count towards maximum residency.

- The Leave of Absence Application Form should normally be submitted to the respective department/faculty at least one month prior to the beginning of the semester in which absence is planned. The form can be downloaded from the following site:http://www.aub.edu.lb/graduatecouncil/Pages/regulationsandforms.aspx

Readmission

The following factors govern students seeking readmission:

- Students in good standing who withdrew voluntarily shall be granted readmission to the School if the period between the end of the semester or session of withdrawal and the beginning of the semester for which readmission is sought is not more than four regular semesters. The readmission request must be submitted to the Office of the Registrar at least one month prior to the beginning of the semester or the summer session to which readmission is sought.
- Students who have left the university for more than two years must submit the readmission request to the Office of the Registrar and must have the approval of the Admissions Committee of the Hariri School of Nursing.
- Students who have left the School while on probation will remain on probation for one semester and have to clear the probation status at the end of a regular semester, or else they will be dropped from the School.

Masters' Completion Program

Overview of the Curriculum

The curriculum includes 37 to 40 credits (depending on the track of study) and may be completed in two years on a full-time basis. Part time students must complete the program requirements within a maximum period of four years. Extension beyond the maximum allowed period of study requires the approval of the Graduate Studies Committee of the faculty and the Graduate Council.
The components of the master's program include: 1) Core courses, 2) Specialty courses, and 3) Elective Courses. The Hariri School of Nursing offers the MSN degree in the following four tracks:

1. Adult-Gerontology Clinical Nurse Specialist (39 credits), with an optional minor in Nursing Education,
2. Nursing Administration and Management (37 credits)

3. Psychiatric Mental Health Clinical Nurse Specialist, with an optional minor in Nursing Education.(40 credits)
4. Community and Public Health Nursing, with an optional minor in Nursing Education (40 credits)

Both thesis and non-thesis options are available in all tracks. Below is a general description of the courses required for graduate education in nursing. Students may receive credit for graduate level courses only. Appendix A provides sample study plans for students in the various tracks for full time and part time study.

Curriculum Masters of Science in Nursing

Core Courses		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
NURS 500	Theories, Concepts and Ethical frameworks for Advanced Nursing Practice	2	0	2
NURS 501	Advanced Nursing Practice: Scope and Roles	2	0	2
NURS 530	Statistical Reasoning and Application in Nursing Research	1	2	2
NURS 502	Advanced Nursing Research	3	0	3
NURS 527	Systems Approach to the Development and Evaluation of Health Care Services	3	0	3
Concentration Courses		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
Adult-Gerontology Track				
NURS 503	Advanced Health Assessment	2	3	3
NURS 504	Advanced Pathophysiology	3	0	3
NURS 505A	Advanced Practice in Adult-Gerontology I	2	8	4
NURS 505B	Advanced Practice in Adult-Gerontology II	2	8	4
NURS 506	Advanced Practice in Adult-Gerontology III (residency)	0	16	4
PHRM 314	Advanced Pharmacology and Therapeutics	3	0	3
	Electives	-	-	0-3
Nursing Administration and Management Track		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
NURS 507	Essentials of Nursing Administration and Management	2	0	2
NURS 508	Advanced Practice in Nursing Administration (residency)	0	16	4
NURS 531	Practical Applications of Budgeting in Nursing	1	0	1
NURS 525	Leadership Theories and Applications for Nurse Managers	3	0	3
NURS 520	Managing Quality with Teams	3	0	3
NURS 533	Advanced Health and Nursing Informatics	3	0	3
MNGT 332	Human Capital Management	3	0	3
	Electives	-	-	0-3
Psychiatric Mental Health Nursing Track		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
NURS 503A	Advanced Health Assessment for Mental Health	1	0	1
NURS 504	Advanced Pathophysiology	3	0	3
NURS 512	Advanced Psychiatric and Mental Health Assessment	1	3	2

PHRM 314	Advanced Pharmacology and Therapeutics	3	0	3
NURS 516	Psychopathology and Human Behavior	3	0	3
NURS 517	Models of Treatment Psychotherapy (Bio-behavioral Nursing Interventions)	1	6	3
NURS 518	Group and Family Psychotherapy	1	6	3
NURS 519	Clinical Residency in Acute Psychiatric Care	0	16	4
	Electives	-	-	0-3
Community and Public Health Nursing Track		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
NURS 503	Advanced Health Assessment	2	3	3
NURS 504	Advanced Pathophysiology	3	0	3
PHRM 314	Advanced Pharmacology and Therapeutics	3	0	3
EPHD 300	Principles of Epidemiology	2	0	2
NURS 522	Principles and Practice of Community Health Nursing	2	3	3
NURS 523	Advanced Community Assessment	2	3	3
NURS 524	Clinical Residency in Community Health Care	0	16	4
	Electives	-	-	0-4
Minor in Education				
EDU 318	Test Construction in Education	3	0	3
EDU 326	Theory and Design of Curriculum	3	0	3
NURS 509	Role development in Nursing Education	3	0	3
	Elective in education	3	0	3
Thesis/Project				
NURS 599 or NURS 598 And Elective	Thesis Project	– – –	– – –	6 3 3
NURS 526	Comprehensive Exam	-	-	0

Students may take an equivalent of 3 credits as elective in any major that helps them with their studies. For students doing a minor in nursing education, the elective credits must be in education.

The Hariri School of Nursing also offers special topic courses ranging from 1 to 3 credits that cover nursing issues of interest to students in the various tracks. These courses can be counted toward the elective credits.

Course Description

NURS 500 Theories, Concepts and Ethical Frameworks for Advanced Nursing Practice 2.0; 2 cr.

This course introduces students at an advanced level to conceptual resources for advanced nursing practice. The course is organized around four themes: conceptions of science and nursing knowledge; antecedents and applications of theories relevant to nursing practice; healthcare ethics; and, nursing and politics. The course focuses on the application of conceptual models to current and future nursing practice.

NURS 501 Advanced Nursing Practice: Scope and Roles 2.0; 2 cr.
This course provides the student with knowledge related to the advanced practice roles and competencies. Students develop a vision and structure for Advanced Nursing Practice that includes the Consensus Model for Advanced Practice Registered Nurse, regulation, credentialing, and emerging professional issues. The course concentrates on the foundations and philosophy of care in different specialties and health care.

NURS 502 Advanced Nursing Research 3.0; 3 cr.
This course focuses on complex research designs, interpretation of research findings and development of research proposals. The interrelationship of theoretical frameworks, quantitative/qualitative design, sample selection, data collection instruments, and data analysis are analyzed in terms of clinical nursing research problems.

NURS 503 Advanced Health Assessment 2.3; 3 cr.
This course focuses on the advanced comprehensive assessment of individuals using a case based approach. Students are provided with advanced knowledge and skills in clinical interview, focused history taking, psychosocial and physical assessment, and diagnostic reasoning.

NURS 503A Advanced Health Assessment for Mental Health 1.0; 1 cr.
This theory course focuses on the comprehensive health assessment of clients using a biopsychosocial approach. Mental health students will build on their knowledge and skills in clinical interviewing, focused history taking, and critical analysis of client data to identify actual and potential health problems. The focus will be on the differential diagnosis of various case presentation with organic and psychological etiologies.

NURS 504 Advanced Pathophysiology 3.0; 3 cr.
This is a course in advanced pathophysiology related to acute and chronic illnesses experienced by adults. Emphasis is placed on pathophysiologic nursing phenomena experienced across diseases, their manifestations and assessment measures. Case studies are used to illustrate application to advanced nursing practice.

NURS 505A Advanced Practice in Adult-Gerontology I 2.8; 4 cr.
This course builds on N504 & N503 and includes a theory and a clinical component. Emphasis is on further refinement and extension of pathophysiological concepts and assessment skills in the management of clients with a spectrum of health problems. Health promotion and risk reduction strategies are also addressed. *Prerequisite: NURS 503.*

NURS 505B Advanced Practice in Adult-Gerontology II 2.8; 4 cr.
This course addresses advanced nursing practice in adult care and includes a theory and a clinical component. Emphasis is on further refinement and extension of pathophysiological concepts and assessment skills in the management of adults and older adults with acute and critical care conditions. . *Prerequisites: NURS 503 and NURS 504.*

NURS 506 Advanced Practice in Adult-Gerontology III 0.16; 4 cr.
This is a practicum in which students apply content learned in NURS 503, 504, 505and 515, and use concepts learned in NURS 501 and PHRM 314, in the advanced management of adult clients with various illnesses. Interdisciplinary collaboration, research utilization, educational activities and case management are emphasized in a specialty area of practice. *Prerequisites: NURS505B and PHRM 314.*

NURS 507 Essentials of Nursing Administration and Management 2.0; 2 cr.
This course introduces management concepts and techniques. It focuses on three core topics: roles and responsibilities of managers; leading organizational effectiveness; and strategic

planning. The focus is on using management models and concepts to work towards improved organizational effectiveness. Case studies of organizational problems provide the basis for group practical work.

NURS 508 Advanced Practice in Nursing Administration 0.16; 4 cr.
This practicum focuses on developing advanced management and administrative nursing skills in hospitals and primary health care settings. *Prerequisite: NURS 507.*

NURS 509 Role Development in Nursing Education 3.0; 3 cr.
This course addresses principles of teaching and learning, instructional methods, test construction and use, as well as curriculum and program development as applied to nursing. The course enables students to apply educational theory and research in various settings such as schools of nursing and staff development centers. **Required for the minor in education.**

NURS 512 Advanced Psychiatric and Mental Health Assessment 1.3; 2 cr.
This course focuses on the advanced comprehensive mental health assessment of individuals using a case based approach. Students are provided with advanced knowledge and skills in clinical interview, focused history taking, mental status examination and diagnostic reasoning. The student performs comprehensive assessment and D.S.M. IV diagnosis on adult populations.

PHRM 314 Advanced Pharmacology and Therapeutics 3.0; 3 cr.
This course covers pharmacology and drug therapy related to advanced nursing practice. General principles of pharmacokinetics pharmacotherapeutics, pharmacogenetics and considerations for special populations are covered. Classes of drugs, their mechanism of action, drug selection, dosage, therapeutic and adverse effects, and patient monitoring are discussed using case studies of clinical conditions. *Students are required to have taken pharmacology at the undergraduate level before PHRM 314.*

NURS 516 Psychopathology and Human Behavior 3.0; 3 cr.
This theory course examines the effects and/or sequels of alterations in selected bio-behavioral processes in the adult human suffering from illnesses with critical onsets and long-term unstable conditions. It focuses on the study of the brain and behavior and the neurological, physiological and biochemical foundations of cognition, mood and affect. Students will be exposed to advanced assessment skills, selected theories and research to identify complex psychiatric disorders and interventions utilizing case studies.

NURS 517 Models of Treatment-Psychotherapy 1.6; 3 cr.
(Bio-behavioral Nursing Interventions)
In this course, students learn the models of treatment of psychiatric and mental health disorders, and become trained on psychotherapeutic interventions in acute settings. Theories on individual psychotherapy, crisis intervention, group and family therapy are covered. This course has a clinical component where students do practicum in a psychiatric care department. In this course students learn the application of the acquired knowledge in the field of practice and start to practice their role.

NURS 518 Group and Family Psychotherapy 1.6; 3 cr.
This course is complementary to the "Models of Treatment" course, and it focuses on group and family psychotherapeutic interventions. Students synthesize knowledge of theories in the provision of care to groups and families with complex psychiatric problems. Family and group intervention strategies are discussed in a variety of settings. Students explore the practice of these interventions in psychiatric care departments.

NURS 519 Clinical Residency in Acute Psychiatric Care 0.16; 4 cr.
The purpose of this clinical practicum course is to provide opportunities for students to apply the content learned from courses. Students will use assessment skills, selected theories, and research to identify complex health problems and interventions for diverse populations. The focus is on advanced case management and practice of the role, which is further developed as the student integrates theory and practice skills in acute and chronic or community settings. Students will spend 224 hours of clinical hours under the supervision of a preceptor.

NURS 520 Managing Quality With Teams 3.0; 3 cr.
This course addresses theory and application of quality teams, their composition, purposes, function, and decision making tools. Process improvement team and the use of mapping processes for process improvement are a main focus.

NURS 522 Principles and Practice of Community Health Nursing 2.3; 3 cr.
This course introduces concepts and issues relevant to the advanced practice of public and community health nursing. Areas of focus include health promotion, management of chronic disease and health education. The course will use case studies in class and field work in the community.

NURS 523 Advanced Community Assessment and Interventions 2.3; 3 cr.
This course focuses on the nursing assessment of the health of communities using a case based approach. Students are provided with advanced knowledge and skills in population and individual needs assessment and community based interventions. Clinical experience will be provided.

NURS 524 Clinical Residency in Public and Community Health Care 0.16; 4 cr.
The purpose of this clinical course is to provide students with opportunities to apply content learned in community courses, with a focus on advanced case management and health promotion. Assessment skills, theories and research will be utilized in identifying health problems and planning community interventions. *Prerequisites: NURS 522 and NURS 523.*

NURS 525 Leadership Theories and Applications for Nurse Managers 3.0; 3 cr.
The aim of this course is to promote familiarity with, critical thinking about, and applications of evidence-based theories of leadership in nursing settings. The course encourages a reflective and analytical approach to cultivating effective personal leadership behaviors. The course introduces the full spectrum leadership model, examines its transformational leadership components in depth, and explores similarities and differences between transformational leadership and related leadership theories.

NURS 527 Systems Approach to the Development and Evaluation of Health Care Services
3.0; 3 cr.
The purpose of this course is to introduce students to the development and implementation of health service programs/projects intended to improve health care, practice, and health system's outcomes. The course addresses assessment of contemporary issues affecting health such as those of the epidemiology of diseases, healthcare policies, socio-cultural, geo-political, and economic. It focuses on the theory and practice of planning from a system's perspective and introduces conceptual approaches and techniques of program evaluation. Students will prepare a project plan as part of the course.

NURS 526 Comprehensive Exam 0 cr.

NURS 530 Statistical Reasoning and Application in Nursing Research 1.2; 2 Cr.
This class introduces students to the basic concepts and applications of statistics for nursing research and how to carry these applications using SPSS. The primary objective of the course is to provide students with the skills necessary to understand basic statistical analyses and carry out those analyses using SPSS. Descriptive, bivariate and linear multiple regression are covered.

NURS 531 Practical Applications of Budgeting in Nursing 1.0; 1 cr.
This course focuses on practical applications of concepts in budgeting and basic financial management. Participants will learn to develop a budget and evaluate the financial status of a department or operating unit and determine what, if any, corrective actions need to be taken. The course presents various analytical methods in management decision making, including variance analysis, and break-even analysis.

NURS 533 Advanced Health and Nursing Informatics 3.0;3 Cr.
This course helps students acquire a foundational and practical understanding of the discipline of health informatics. It introduces health informatics concepts and competencies utilized in monitoring and evaluating nursing practice. The course examines the use of digital tools to foster engagement of patients, families and consumers in their health care. Emphasis is also placed on how Electronic and Personal Health Records can facilitate health information exchange.

NURS 598 Project 3 cr.
Special projects directed toward acquiring skills needed in the development of programs relevant to nursing care within the student's area of interest. Projects vary depending on the track of study.

NURS 599 Thesis 6 cr.

Below are courses in other faculties that students in the Nursing Administration and Management track and Community and Public Health Nursing track can take:

HMPD 302 Health Management & Policy (3 credits): The course focuses on the managerial and planning skills needed by all public health graduates. The course is designed to introduce students to policy making; the role of private and public sector planners, decision makers and administrators in the policy-making process; policy/program implementation; management; and evaluation.

HMPD 311 Health Information Systems (2 credits): This course will introduce basic concepts of information systems, with an emphasis on applications in the management and operations of health care organizations.

HMPD 315 Performance Improvement (3 credits): The course examines the two dimensions of the service delivery process; the provider, and the service. In this context, the course consists of two interrelated modules emphasizing the role of human resources management and service excellence in improving the performance in health care settings.

HMPD 325 Quality Management and Accreditation in Health Care (2 credits):
A course that examines at multiple levels the theory and practice of quality management and accreditation in health care organizations. The objectives of the course are to: (1) convey an understanding of quality of care, with particular attention to conceptual framework for continuous quality improvement, quality assessment, improvement and patient safety including approaches, methods and tools, (2) explain how to develop a quality improvement plan, performance indicators and measurement systems for quality and accreditation; and (3) address ethical issues related to quality management, risk management and patient safety with particular attention to Lebanon and the region.

HMPD 342 Financial Management and Accounting (3 credits): The course covers the basic skills of modern financial management and accounting, and the utilization of its concepts and tools to make decisions in health care organizations

MNGT 330 Total Quality Management (3 credits): An advanced analytical account of TQM as a modern management philosophy and program for achieving and sustaining customer satisfaction. Relevant TQM knowledge base will be highlighted with emphasis on the executive role and intensive use of practical applications.

MNGT 332 Human Capital Management (3 credits): An advanced analysis of the human resource function and the challenge of managing human capital in a modern corporation. The course highlights the interrelationships of the different human resource management functions and the strategic role of the HR in today's environment, and capitalizes on new trends and actual case examples to illustrate current HR best practices. **Required in the nursing administration and management track.**

MNGT 340 Organization Theory (3 credits): An analytical overview of management thinking with special emphasis on concept-formation, methodology, organizational models, management functions, processes and major schools of thought.

EPHD 300 Principles of Epidemiology (2 credits): A course in principles, concepts and applications of epidemiology in the public health field. The course consists of lectures, assigned readings and complementary practical sessions that provide students with basic epidemiological knowledge and tools relevant to public health practice. Students are given the opportunity to acquire an understanding of the vocabulary of epidemiology and methods of epidemiological research, investigation and control. Topics covered include rubrics of epidemiology, morbidity and mortality measures, sources of epidemiological data, outbreak investigation, epidemiological study designs, causal inference and causation in epidemiology. This course also covers an overview of the major biological agents associated with infectious and communicable diseases with a focus on disease ecology, etiology, transmission and contagion modes. **Required for the Community and Public Health Nursing Track students.**

Minor in Education. *Possible Courses include:*

EDUC 301 Seminar in the History and Philosophy of Education (3 credits*):* Development of educational thought and practice through primary sources. Systems of educational theory will be examined from the age of Pericles to post World War II, with special emphasis on contemporary educational practice. *Annually.*

EDUC 315 Psychology of Education (Advanced) (3 credits): A comprehensive analysis of instructional theory, measurement skills, cognitive development, learning theory, and methods of applying behavior modification in the classroom. *Prerequisite: EDUC 215. Annually.*

EDUC 326 Theory and Design of Curriculum (3 credits): Examination of organization, scope, and sequence of curricula with special emphasis on various approaches to curriculum development. *Annually.* **Required for the minor in education.**

EDUC 318 Test Construction in Education (3 credits): Development of testing techniques and skills for appraisal of the cognitive and affective objectives of instruction. *Alternate years*.
Other possible courses include EDUC 303, 313, & 330. **Required for the minor in education.**

Comprehensive Examination

Students are required to sit for a written comprehensive examination according to AUB regulations. The purpose of this exam is to assess the students' overall synthesis of all the components of the Master's degree program, i.e. integrating of theory, practice, and research.
The student must pass the comprehensive examination after completion of most of the course requirements for the MSN degree. Students must register NURS 526 (zero credit course) the semester during which they plan to take the comprehensive exam.

Students must take the comprehensive exam before doing their residencies and projects, except full time students who may take it concurrent with their project or residency. The Graduate Committee of the

Hariri School of Nursing shall set the timing of the examination. The student who does not pass the comprehensive examination may take it a second time after a period of at least three months. See Appendix B. **The comprehensive examination is offered twice per year (November and April); dates are announced early during the academic year**.

Thesis/Project

Two types of master's degree programs are available:

- *A master's program requiring a thesis* based on independent research work. Students following this program are required to present a 6 credit thesis, in addition to completion of the courses required in the track of study.

- *A non-thesis master's program*: The student following this program is required to do a 3 credit hour project that should be approved by the student's advising team and the Graduate Studies Committee, in addition to completion of the courses required in the track of study.

For those students enrolled in the MSN with thesis option, the student must submit a thesis based on original, independent research. The thesis must be in English. An abstract not exceeding 350 words must be submitted with the thesis. Once approval for writing the thesis/project is granted, students must conform to the University Thesis Manual found in the library. Application of the thesis manual is mandatory, and those not conforming to its requirements will not be accepted. The student must submit copies of the thesis to the members of thesis committee, unbound but ready for binding, at least two weeks before the thesis defense. The thesis manual guidelines are available at
http://website.aub.edu.lb/ulibraries/Documents/ThesisManual/thesis-manual.pdf

Guidelines for Thesis and Project

All MSN students are required to develop a scholarly product that contributes to the generation or application of knowledge to enhance practice, education, theory or policy. The student should negotiate the scope and objectives of the product with the faculty advisement team. For a thesis, the advisement team would be the thesis committee. For a project, the team would include the student's adviser and a second reader. The composition of the project advisement team shall be approved by/communicated to the program coordinator.
MSN students need to declare their choices of the thesis/project soon after enrollment, preferably making specific plans about the thesis/project by the time they have completed 12 credits so that this requirement can be completed in a timely manner.

The AUB HSON utilizes the writing guidelines of the American Psychological Association (APA) 6th Edition in all written requirements such as term papers of courses. The link below provides adequate guidance for how to organize papers, cite references inside the text and display the reference list using the APA style:

https://owl.english.purdue.edu/owl/resource/560/01/

Project

Project types assume comparable levels of student involvement, performance and scholarship. Projects must be over and above papers and projects completed for course requirements. Options for the project include:

1. **Report of Research Findings**: students may use existing data under a faculty member's guidance to prepare a scholarly paper of publishable quality.
2. **Research Experience**: Active participation in a Faculty member's project with hands-on experience in phases of the project, like writing a proposal, design of the study, data collection, data analysis and reporting of results. The product of this experience would include a summary of the student's learning in the experience, a description of the student's contribution to the project, and a paper on a topic relevant to the project.
3. **Innovations in Practice**: These may include:
    a. **Research Utilization**: Development of an action plan for research utilization in targeted areas. This includes development of the associated clinical protocols/clinical practice guidelines and plans for implementation and evaluation.
    b. **Small needs assessment studies for program development**.
    c. **Educational Media**: Development of an instructional media project or web-based instruction and demonstration of the appropriateness of the product to a specific audience.
4. **Policy Development or Analysis:** This may include:
    a. **Organizational/ Institutional Studies**.
    b. **Policy Initiatives**: Development of a position paper which is research- based, aimed at changing a specific policy or policies. This must be aimed at a group of policy makers to effectively promote change.
5. **Other Options**: Any other project of interest to students that is related to significant clinical, theoretical, management or policy topics. All projects should demonstrate a research emphasis.

Any project that involves human subjects' research needs to be approved by the institutional review board (IRB) before data collection begins. See the IRB website for guidance on the process.

Procedure for Project Completion

First the project advisement team is approved by the Graduate Studies Committee at least 4 months before the project defense. The adviser is a faculty member with the primary responsibility of overseeing the ongoing work of the project. The reader is not necessarily involved in continuous advisement but brings expertise. His/her role may vary in the amount of involvement.

Once initial approval is sought, the student submits a one page prospectus outlining the proposed project and gets approval of the advisement team from the Graduate Studies Committee. The student meets regularly with the adviser during the project work. A final meeting is then scheduled with the advisement team to ensure successful completion of the project. Criteria for evaluation of projects in administration, adult care, and education are attached in appendix B. Projects are graded as Pass/Fail. Grading criteria for projects are shown in Appendix C.

- First registration (3 credit course) to be billed for 3 credits.
- Second registration (zero credits) to be billed for 0 credits.
- Registrations beyond the second time should be the exception for projects and, thus, will require Faculty Graduate Committee approval and students will register for the project (zero credits) and be billed for 1 credit.

Thesis

Thesis Proposal
Students prepare a proposal outlining the research plan. This proposal needs to be approved by the student's thesis chair and other review committees before proceeding to the data collecting stage. The thesis proposal plan needs to be approved by the Graduate Studies Committee at least 4 months prior to the thesis defense.

Thesis Committee
The Master's thesis committee should be composed of at least three members approved by the chairperson of the program. The thesis topic and Committee membership must be approved at least 4 months prior to the thesis defense date. It is advisable that the thesis committee includes one member from outside the Hariri School of Nursing, who may be from an institution outside AUB. All committee members should hold professorial rank. The thesis committee approves the thesis topic and research program and conducts the thesis defense.

Thesis Defense
The thesis defense is open to the public and must be carried out no later than the dates specified in the table below depending on the graduation semester.

'Pass' or 'fail' is reported for the thesis and defense. In case of failure, the students may resubmit the thesis and defend it after a period of at least three months. Failure the second time leads to discontinuation from graduate work.
Students must be registered for the thesis or at least one course in the semester or session during which they expect to graduate in order to present their defense.
Check the AUB catalogue for the deadlines for thesis approval, defense and library aubmission.
Deposit of Thesis in the Library
After passing the thesis defense examination, the student is required to deposit two hard copies and one CD copy of the thesis at Jafet Memorial Library. A library receipt of these copies must be delivered to the Office of the Registrar before the student is awarded the degree. The student should sign a release form indicating whether or not the library is authorized to supply copies of the thesis to other libraries or to individuals. The non-authorization option is valid for a period of two years only, after which copies of the thesis will be supplied on request.

Residence Requirements

To meet the minimum residence requirements for the master's degree, a student should register and be in residence as a graduate student for at least two semesters and two summers, or four summers.

Research

The faculty of the Hariri School of Nursing believes that research is a major component of the MSN program and is basic to the development of a scientific knowledge base for practice. Information on faculty research is available on the web and is updated on a regular basis with new faculty. Appendix D lists the graduate faculty research profiles.

The faculty of the Hariri School of Nursing at AUB believes that:

- Nursing research contributes to the advancement of knowledge development in general and to the body of nursing knowledge in particular.
- Nursing research is basic to effective nursing practice.
- Programs of research generate more in–depth knowledge in a focused area of research.
- A thesis could be generated from established programs of research. This improves the depth and quality of studies. It provides the student with unique opportunity of working with a circumscribed area of research under the mentorship of an expert faculty member.
- Possibilities also are made available for students to generate their own thesis topics under the supervision of available expertise. This encourages originality and applicability of research. Students are encouraged to choose topics of interest in close consultation with their adviser.

Publication rights based on thesis/project work

- Students publishing Thesis/Project Work, which is within established programs of research at the Hariri School of Nursing should do that in close consultation with their mentors. Agreement on authorship needs to be established in advance.
- It is customary that students writing articles based on original thesis work should be designated as first authors and faculty members mentoring their work as second and consecutive authors unless previously agreed otherwise.

AUB Policy on Graduate Assistantships

Assistantships covering tuition and partial living expenses are available for students at the graduate level in return for a specified number of hours of work per week (maximum of 20 hrs /week) for the Hariri School of Nursing. Assistantships are awarded on the basis of the academic record and departmental needs. Applications for new students are provided within the admissions application package. Refer to AUB's website http://www.aub.edu.lb. Continuing students may obtain applications from the Office of the Dean of the School. Applications should be submitted early in the semester preceding the semester for which one is applying. For more information about Graduate Assistantship, consult the Dean's Office and the Students Services Officer Mrs Lynn Berbary Najem, 4th floor, Hariri School of Nursing Building.

General Policies and Information

Non-Discrimination Policy – Title IX

AUB is committed to facilitating a campus free of all forms of discrimination including sex/gender-based harassment prohibited by Title IX. The University's non-discrimination policy applies to, and protects, all students, faculty, and staff. If you think you have experienced discrimination or harassment, including sexual misconduct, we encourage you to tell someone promptly. If you speak to a faculty or staff member about an issue such as harassment, sexual violence, or discrimination, the information will be kept as private as possible, however, faculty and designated staff are required to bring it to the attention of the University's Title IX Coordinator. Faculty can refer you to fully confidential resources, and you can find information and contacts at www.aub.edu.lb/titleix. **To report an incident**, contact the University's Title IX Coordinator Trudi Hodges at 01-350000 ext. 2514, or titleix@aub.edu.lb. An anonymous report may be submitted online via EthicsPoint at www.aub.ethicspoint.com.

Academic and Professional Integrity

Academic integrity and honesty are central components of student's education. Ethical conduct maintained in an academic context will be taken eventually into a student's professional career. Academic honesty is essential to a community of scholars searching for and learning to seek the truth.

Anything less than total commitment to honesty undermines the efforts of the entire academic community. Both students and the faculty are responsible for insuring the academic integrity of the University.

Academic dishonesty, including but not limited to cheating and plagiarism, is deplored and not to be tolerated. Any act for cheating may be ground for probation, suspension and/or expulsion. Any act for plagiarism may be grounds for a failing grade on the paper and in the course. In addition, other sanctions may be imposed by the school for acts of academic dishonesty.

Students are expected to have high standards of integrity in both the clinical and academic settings. Integrity is a reflection of the respect that one holds for oneself and others. It is reflected by students' behavior in class and in the clinical practicum.
In the clinical settings, students are expected to protect patients' confidentiality, and to be honest in any documentation regarding the patient's condition and their own assessment and interventions. Students are expected to maintain high professional standards, including being physically, intellectually, emotionally and academically prepared when caring for patients.

Student Code of Conduct (http://pnp.aub.edu.lb/general/conductcode/index.html)

The purpose of this code is to provide students with a clear statement of the standards of behavior expected in an educational environment, so that they make responsible choices regarding their participation in the academic community and understand the consequences of

their infringement of these standards. Violations may be of an academic or non-academic nature.
Jurisdiction of academic violations lies initially under the authority of the dean of the faculty or school to which the student belongs. Misconduct that is clearly non-academic falls under the jurisdiction of the dean of student affairs who will take the necessary action in consultation with the dean(s) of the faculty or school to which the student belongs.
The following are examples of actions deemed in violation of the Student Code of Conduct; they are not intended to define misconduct in exhaustive or exclusive terms. Any student who violates the principles described in the preamble to this document shall be subject to disciplinary action in accordance with the Student Code of Conduct.

Definitions of Misconduct

A. Academic Misconduct

Offences involving academic misconduct include, but are not limited to, the following:

1. **Cheating**[1]
   While taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work.
   Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

[1] **Adapted from the Villanova Academic Integrity Code.**

2. **Plagiarism**[2]
   Whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.
3. **In-Class Disruption**
   Students in class are expected to behave appropriately, and shall not disrupt classes or exams by extraneous conversation and/or misbehaving.
4. **Dishonesty**[3]
   Students are expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:
   a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
   b. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
   c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.
   d. Stealing or damaging library books.
   e. Unlawfully copying computer software.
   f. Engaging in bribery of any kind.

B. Non-Academic Misconduct

1. Disruption/Obstruction

Students have the right to express their opinions on matters of concern to the University in an organized manner and in a public space, excluding residences on campus, but they must notify and consult with the dean of student affairs before doing so. The nature of the event and any publicity accompanying it must be reviewed by the dean to assure that neither Lebanese law, nor university policies and norms are being violated.

In cases where student-sponsored events, including protests, sit-ins, and demonstrations are, after such consultation, not approved by the dean of student affairs, or, if needed by the Board of Deans or the president, it may become necessary for the dean of student affairs to undertake disciplinary measures and even to instruct campus protection to bring the public gathering to an end.

Disrupting or obstructing the normal educational process or any university function or activity by student demonstrations, sit-ins, or 'strikes' is strictly prohibited. This includes, but is not limited to: disrupting classes, library operations, seminars, exhibitions, meetings, ceremonial events, or examinations; impeding or preventing others from attending such events; falsely activating a disaster alarm; or making a threat.

Under no circumstances are any members of the university family to be intimidated or threatened in the execution of their normal duties and responsibilities. That means that students and faculty who wish to hold or attend classes or to go to their offices or places of study shall not be prevented from doing so; non-academic staff and administrators shall not be impeded from going to their places of work.

2. Distribution of Unauthorized Published Material

---

[2] Adapted from the Modern Language Association Style Manual and Guide to Scholarly Publishing, as found on Duke University's web page.

[3] Adapted from the Villanova University Academic Integrity Code.

The public distribution and posting of published materials such as fliers, leaflets, posters, audiovisuals, etc., must be approved and stamped by the dean of student affairs. The campus protection office will remove from display any such unauthorized material.

3. Theft

Stealing on campus or at a university-authorized event off campus, including unauthorized use of university equipment or services (e.g., telephones, photocopiers, or computer facilities), or possession of stolen property, is prohibited.

4. Destruction of Property/Endangering Public Safety

Students are expected to protect university property and to respect the safety of others. Acts contrary to these principles, which include, but are not restricted to, the following, are subject to disciplinary procedure:

a. Engaging in vandalism or other intentional damage (such as spray painting or graffiti) to property on campus or at university-authorized events off campus.

b. Littering, such as disposing of waste (empty bottles, cigarette butts, food containers, etc.) in other than designated places on campus.

c. Unjustified discharge, damaging, or tampering with any fire extinguisher, fire alarm, or other safety devices.

d. Taking, or attempting to take, action that damages or could damage private property, without the consent of the owner or person legally responsible.

e. Appropriating, or attempting to appropriate or possess, private property, without the consent of the owner or person legally responsible.

f. Unauthorized entry, unapproved duplication of keys or use of such, or unauthorized use of campus facilities.

6. Mental or Physical Harm

Acts that inflict mental or physical harm are prohibited, including the following:

a. Engaging in physical aggression including, but not limited to, assault.

b. Engaging, or attempting to engage, in intimidation, coercion, extortion, blackmail, or bribery; bullying; threatening violence, injury, or harm to others on campus or at university-authorized events off campus; endangering or tending to endanger the safety, health, or life of any person.

c. Engaging in behavior that creates a substantial risk of, or results in, injury to others, such as committing arson or causing a riot.

d. Using force, inciting violence, inflicting or attempting to inflict injury to others on campus or at a university-authorized event off campus.

e. Engaging in any activity that endangers the health and safety of an individual or demeans an individual in conduct of an unbecoming or humiliating nature, or in any way that detracts from an individual's academic pursuits.

6. Possession of Dangerous Weapons or Materials

Students must not distribute, possess, store, or use, on campus or at a university-authorized event off campus, any kind of weapon, device, explosive, dangerous chemicals, hazardous materials, or any other instrument designed to do bodily harm or to threaten bodily harm. Instruments used to simulate such weapons, which endanger or tend to endanger any person, shall be considered weapons.

Students are also prohibited from distributing, possessing, storing, transferring, selling or attempting to sell, delivering, using or attempting to use, any illegal drugs, narcotic or hallucinogenic, on campus or at any university-authorized event off campus.

7. Discrimination and Harassment

Students are not allowed to discriminate on the basis of race, gender, age, religion, national origin, ethnic origin, marital status, mental or physical disability. Nor shall they harass, intimidate, insult, or threaten others whether verbally, in writing, or through electronic means.

Engaging in sexual harassment, e.g., requests for sexual favors, unwelcome sexual advances, unwelcome physical contact of a sexual nature, spoken comments or abuse (including email) of a sexual nature, and the public display of sexually suggestive objects or pictures is prohibited (refer to the University Policy Against Discrimination and Harassment).

8. Smoking and Alcohol

The consumption of alcohol, on campus, by students is not permitted. Smoking is not permitted in university buildings other than private residences and those areas within the student dormitories, as may be designated from time to time by the dean of student affairs (refer to the University Policy on Smoking). Students must abide by the following:

- Smoking is not permitted in any University building, including the Medical Center, except for private residences and student dormitory rooms, as may be designated by the Dean of Student Affairs. Smoking is prohibited in all dormitory common rooms, corridors, lavatories, and other public spaces. Smoking is prohibited in all university vehicles.

- Persons smoking in outside open areas, or in private residences, or in designated dormitory rooms where smoking is permitted, are required to ensure that smoking materials are disposed of in a tidy and safe manner. On no account are cigarette butts to be disposed of on the ground or thrown into the wooded or landscaped areas.
- All persons on AUB property are expected to respect this Smoking Policy. Breaches of the Policy should be reported to the Environmental Health and Safety Center, extension 2360. Persons who are found to have breached the Policy will be subject to disciplinary actions.

9. Inappropriate Sexual Behavior

Publicly engaging in sexual behavior is prohibited as deemed by Lebanese law.

10. Use of Computers

Accessing protected computer accounts or other computer functions, knowingly transmitting computer viruses, and unethical use of AUB access is prohibited (refer to the University Policy on the Use of Computers).

1. Inappropriate conduct in AUB libraries

Any action that impedes the safe and effective use by all patrons of the AUB libraries for the purpose of study, research, reading, and other intellectual pursuits, is prohibited (refer to the University Policy on Appropriate Conduct in Libraries).

Disciplinary Actions

Disciplinary action will be imposed according to the nature (academic or non-academic) and severity level of the violation.

A. Academic Misconduct

In principle, enforcement of disciplinary actions for academic violations is carried out by those immediately responsible.

It is the responsibility of the faculty to uphold university policies. Thus, the immediate responsibility for dealing with instances of cheating, plagiarism, and other academic violations rests with the faculty member. If a faculty member has good reason to believe that a student has violated academic standards, it is his or her responsibility to discipline the student expeditiously.
A faculty member who has good reason to believe that a student has violated academic standards must give a grade of zero on the exam or assignment where the violation occurred.
When the instructor has taken disciplinary action, he or she should send a letter to the Student Affairs Committee in the faculty or school in which the student is enrolled, informing that committee of the incident and the action taken. A copy of the letter will be placed in the student's file, as well as forwarded to the student's adviser for follow-up.

B. Non-Academic Misconduct

Violations of a non-academic nature are the responsibility of the dean of student affairs, in consultation with the dean of the faculty or school in which the student is enrolled and, as necessary, the chief of campus protection. Students should know that the laws of the Republic of Lebanon apply on campus, and those who violate these laws may be subject to criminal prosecution.

C. List of Primary Disciplinary Actions

Documentation of disciplinary actions, other than suspension and expulsion, will not become part of the student's permanent record. Records of the University Disciplinary Committee decisions, including charges and sanctions, will be

maintained as part of the confidential records in the office of the respective dean, for a period of up to four years after the student graduates or ceases to be a student.

Range of Actions:

Informal Warning

This may be oral or written. It is a statement that the student has inadvertently violated a university regulation. The warning will be recorded in the respective dean's records and the student will be documented.
Examples: *Littering and smoking in prohibited areas.*

Reprimand

This will be in writing. It is a statement that the student has violated a university regulation. It is intended to communicate most strongly, both the disapproval and the reprimand of the university community. The reprimand will be kept in the respective dean's records.
Examples: *Inadvertent plagiarism - failure to cite sources appropriately, and inappropriate physical contact.*

Dean's Warning
This will be in writing. Only two Dean's Warnings are allowed in a student's academic career at AUB. It is recommended that any violation of university regulations after the second Dean's Warning results in consideration of suspension. Such a warning is kept in the file of the student and the respective dean's records.
Examples: *Plagiarism, academic dishonesty, disruption-obstruction, mental or physical harm, discrimination and harassment.*

Suspension
This will be in writing and will form part of the student's permanent record. A student will be suspended for a fixed period of time during which the student may not participate in any academic or other activities at the University. At the end of the suspension period, the student may be readmitted to the University, only upon the recommendation of the University Disciplinary Committee.
Examples: *Cheating, theft, and destruction of property.*

Expulsion
This will be in writing and will form part of the student's permanent record. Expulsion denies the student the right to participate in any academic or other activities of the University for an indefinite time. Only under the most unusual circumstances, and upon the recommendation of the University Disciplinary Committee, will an expelled student be readmitted to the University.
Examples: *Academic dishonesty, possession of dangerous weapons or materials, and endangering public safety.*
N.B. Any person who maliciously lies to cover up an act sanctioned by the code of conduct will be considered to be an accessory after the fact and may be subject to disciplinary action.

D. Required Withdrawal from Campus Pending Hearing
In extraordinary circumstances, when the student's continued presence is deemed a danger to the university community, the student will be required to withdraw from the campus, pending a meeting of the University Disciplinary Committee. This action shall normally require the approval of the president of the University.

E. Secondary Disciplinary Actions
In addition to the disciplinary actions listed above, the following secondary disciplinary actions may be imposed upon those who violate the Student Code of Conduct. Secondary disciplinary actions may be of an academic or non-academic nature.

Secondary Disciplinary Actions – Academic

- The student may be prohibited from participating in the work study program.
- The student may be prohibited from receiving any form of financial aid, scholarship, or monetary award.
- The student may be prohibited from receiving any form of honor, merit award, or other academic recognition award.
- The student may be prohibited from holding a graduate assistantship.
- The student may be given a failing grade in a course or a test or any other form of academic assessment.

Secondary Disciplinary Actions – Non-Academic

- The student may be prohibited from representing AUB in any official role, activity, or event.
- The student may be prohibited from serving as an officer of any AUB organization including club, team, or society.

- The student may be prohibited from living in any AUB hall of residence or similar facility.
- The student may be strongly advised to attend treatment or counseling as determined by the director of the counseling center, in consultation with the dean of student affairs.
- The student may be required to make financial restitution.
- The student's case may be referred to an external agency for further action (this could include the filing of criminal charges).

Complaint Procedure

Any person subject to, or who witnesses, a violation of the Student Code of Conduct should forward a written complaint to a faculty member, a chairperson, or any university official. Academic violations shall be forwarded to the dean of the faculty to which the student accused of the violation belongs. Non-academic violations shall be referred to the dean of student affairs. Violations that may require suspension or expulsion will be referred by the concerned dean to the University Disciplinary Committee.

Formal Hearing by the University Disciplinary Committee

The University Disciplinary Committee will deal with alleged violations in a manner that ensures that those charged with a violation understand the charge and the evidence against them and are afforded a reasonable right of rebuttal.
The University Disciplinary Committee shall inform the student of the charge in writing. Evidence shall be presented in the presence of the student who shall have a reasonable right of rebuttal including the right to cross-examine witnesses. In determining penalties, the committee may take into consideration the student's cumulative discipline record.

Appeal Procedure

Any student who is charged with a disciplinary offense has the right to a full and fair hearing for any disciplinary charges brought against him or her under university regulations.
If any of the following apply, a student may appeal to the dean of the faculty or school regarding faculty or departmental decisions, or to the University Disciplinary Committee against disciplinary action taken by the dean of student affairs or the dean of the faculty or school to which the student belongs:

1. Procedural error
2. New evidence
3. Unsupported conclusion
4. Disproportionate sanctions

The outcome of this appeal may result in higher, lower, identical, or no sanctions at all being imposed. The University Disciplinary Committee's decision shall be final.

Other Policies

Student Representation on Faculty Committees

Student representation on the Hariri School of Nursing Committee is encouraged.
Students can request that items be put on any Hariri School of Nursing Committee agenda regarding graduate students. At the discretion of the Graduate Program convener or the Deanof the Hariri School of Nursing, this request may be granted.

Facility and Supervision Guidelines for Graduate Student Practice

The Faculty and students will discuss qualifications for clinical facilities and preceptors. Any student may seek new learning experiences in facilities that are not currently used by the Hariri School of Nursing.

In order to accomplish the negotiations that are normally done when a graduate student requests placement at a new clinical facility, placement is expected to begin (at least 8 weeks ahead of lead time is preferred). Student selection of clinical facilities and /or preceptors is under the supervision of the Graduate Faculty.

Students with Special Learning Needs

Students with disabilities applying to AUB are strongly encouraged to make their disability known to the Admission Office. This information will not affect the decision on admission; rather, it will give the University the opportunity to offer specific assistance and support through programs and services provided by different departments on campus. AUB strives to make learning experiences accessible for all. If you anticipate or experience academic barriers due to a disability (such as ADHD, learning difficulties, mental health conditions, chronic or temporary medical conditions), please do not hesitate to inform the Accessible Education Office. In order to ensure that you receive the support you need and to facilitate a smooth accommodations process, you must register with the Accessible Education Office (AEO) as soon as possible: accessibility@aub.edu.lb; +961-1-350000, x3246; West Hall, Room 314
As old buildings are renovated and new ones built, wheelchair access ramps are being constructed. Some parking lots have been assigned and dedicated for special persons and they are located on different AUB sites. These areas are labeled for "Special Permit" holders. A room for the Visually Impaired is located in the West Hall.

Students Rights and Responsibilities

Students are members of the academic community and are also citizens. Students enjoy the same freedom of speech, peaceful assembly and right to petition. Students have the responsibility to know and obey the Lebanese Laws & that of the University. It is the responsibility of the student to know institutional regulations, policies and established guidelines as stated in this handbook. Students are accountable for their own behavior at all times. Students have the right to freedom from discrimination on the basis of race, color, religion, sex, and age. Students have the right to be informed, in writing, of the expected behaviors and standards by which they will be evaluated prior to participating in clinical classrooms activities. Students have the right to academic evaluations which are not prejudiced and which are based on stated course requirements. As constituents of the academic community, students are free, individually or collectively, to voice constructive criticism through identified channels on issues such as curriculum, and matters of general interest to the student body without fear of reprisal.

While under the direct supervision of an instructor, students also have the right to adequate safety precautions provided by the Hariri School of Nursing. Students also have the right to negotiate participation in clinical situations which they feel are threatening to their personal health or life. Students, individually or collectively, have the right to expect, within a reasonable length of time, feedback concerning all student related issues presented to the faculty.

Freedom in Classroom

Students are responsible for learning the content of the courses in which they enroll, though they should be free to take reasoned exception to the data or views offered in any course of study, and reserve judgment about matters of opinion.
Students are responsible for complying with standards of academic performance required by each course in which they are enrolled. Such standards shall be communicated clearly in writing on or before the first meeting of each course. Students should have protection against prejudiced, arbitrary, and capricious academic evaluation.
Knowledge of student's views, beliefs and political associations acquired by the faculty members in the course of their work as instructors, advisers, and counselors are to be considered confidential.

Freedom of Inquiry and Expression
Students are free to examine and discuss questions and issues of interest to them, to express their opinions whether in public or in private. Such freedom does not, however, permit student groups to disrupt the orderly processes of the educational environment, nor does it permit the expression of ideas in ways which violate civil or criminal law, blatantly disregard the truth, threaten, demean, or libel others. In expressing their views, students should make clear that such views are not necessarily those of the University.

Getting in Touch with the Right People at the Rafic Hariri School of Nursing

Students are encouraged to communicate any concerns they might have to the appropriate persons. They can refer to the Student Services Officer for the following issues:

- Answering queries about the MSN program
- Student orientation and advising
- Follow up on graduate assistantships and scholarships available to nursing students
- Problems in registration (opening capacity, removing restrictions, resolving time conflict problems, removing holds, selection of elective courses, drop and add courses)
- Dealing with the administrative body (Registrar's office, Office of Financial Aid, Office of Student Affairs and specific committees at HSON)
- Writing and submitting petition letters (underload/overload credits, late registration, medical reports, course withdrawal, reactivation and readmission etc.)
- Selection of specific academic forms for internal and external procedures
- Program evaluation and satisfaction surveys
- Career guidance and work opportunities
- Student related activities such as student elections, NSS activities and graduation parties etc.
- Requesting credentials after graduation.

The Student services office seeks to assist and guide nursing students to develop their plan to academic success, by referring them to the appropriate resources and procedures, and ensuring that they are complying with AUB academic rules and regulations.

Issues related to a particular course are best discussed with the course coordinator. Problems with a student's academic progress should be followed up with the assigned academic adviser. Students may discuss issues related to a particular class with their advisers. If the student cannot resolve problems with the course coordinator or adviser, he/she should talk to the track coordinator, and then the MSN convener. If necessary, issues are referred to the Dean of the School.

University Services

University Libraries

The AUB library system consists of two main libraries: the University Libraries and Saab Memorial Medical Library.
The University Libraries include the Jafet memorial Library as the Central Library, with two branch libraries: the Engineering and Architecture Library, and the Science and Agriculture Library with its annex AREC (Farm) Library.

Refer to http://www.aub.edu.lb/libraries/Pages/default.aspx for information about the libraries
The Saab Memorial Medical Library (SML) is dedicated to the Memory of Dr. Nicholas Saab (AUB School of Medicine graduate 1959) through a generous gift from his parents.

SML collection consists of 1,200 printed periodical subscriptions , over 82,320 backfile periodical volumes, nearly 42,000 books , over 2,000 of which are of historical value such as (Avicenna's "Cannon of Medicine," 1593, which has been digitized and published on the Web under http://ddc.aub.edu.lb/projects/saab/avicenna/index.html, and nearly 2300 audio-visual items, including computer software. SML has a large number of the most important bibliographic medical and allied health data bases, and more than 2,500 e- journals. SML has been automated since 1990 and is accessible through the internet at http://www.aub.edu.lb/libraries/medical. In 1978, SML was designated by WHO as the National Focal Point of Lebanon. The Library has a special collection called the Lebanese Corner, http://192.168.100.187/, which includes publications about Lebanon or by Lebanese authors in the fields of medicine and other health related topics.

With its rich, up-to-date medical collection, SML aims to promote research in the medical and allied health fields. SML is open 80 hours a week. Databases are currently accessible via library or home search via AUBs' website.

Office of Information Technology

The office of information technology (OIT) manages AUB and AUB Medical center's central information technology. The OIT manages the Student Information System (AUBsis) operated by the Registrar's; the Library Information System, Financial Information System; the Learning Management System (Moodle); and the integrated hospital information system operated by the hospital administration and departments. You can view the services provided by the IT organization by visiting: www.aub.edu.lb/it/.
Before using any of the services below, you must activate that specific computer accounts first.
AUBnet account: The AUB net account provides e-mail, intranet, and Internet access in addition to other services such as roaming storage space, network printing, and personal web site space. Students must activate their AUB net account first as it is required to activate other accounts.

AUBsis account: The AUB sis account provides access to the AUB student Information System, a web-based application designed to provide the following on-line self services to students and faculty over the intranet and the Internet: On-line Registration, Drop and Add, Class Schedules, Grades, Student Transcripts, Address Information, and Billing Statements.

Student computer labs, located in Agriculture, Bliss, Business, Engineering (Wing B), Fisk, Physics, Van Dyck, Diana Tamari Sabbagh buildings, as well as all Libraries and dorms are used for instruction by the various departments and for personal use by the students. Many popular and PC software packages are available on the lab servers.
An Internet fee of LL60, 000 is charged every semester and will automatically be added to the statement of fees. The quota of Internet data per month per student is 100MB. This is a combined quota of web and e-mail data. Through the AUB Net Resources web site you can find out your Internet data usage for the month.
No limit exists on the time spent browsing and sending information on the web. The limit is only on the volume of data that is sent/ received in the process.

Access to AUB Computing Facilities

Access to computer hardware, software, intranet, and the Internet services is provided to members of the University for the primary purpose of enhancing the academic experience. Access to the use of AUB computer facilities is through authorized computer accounts. To be granted the use of a computer account, users must agree to abide by the AUBnet Code of Conduct for Users of Computing System and Internet Services.
A computer account consists of a unique log-in ID and a password. You identify yourself to the computer system when you log in. Your log-in ID tells the computer who you are.

Like the PIN on your bank ATM card, your password is the key to your account. You must always keep your password secret.
To activate your AUB computing accounts go to http://website.aub.edu.lb/it/Pages/index.aspxthen click on account creation and management and follow instructions..

Available facilities:

- **Intranet and Internet Services**
  IT provides a wired and wireless network infrastructure ensuring secure, reliable and widespread access for AUB users across the entire campus and hospital, including all dorms and faculty apartments. AUB students can connect to the AUB network from public computer labs or personal laptops and mobile devices via the campus-wide wireless network using any web browser. Students can access many web enhanced courses and online material that they are registered in.
  With an AUBnet account, all students, faculty and staff have full access to Internet, email,
  personal websites and other services such as network printers, intranet applications and the High Performance Computing (HPC) system.
  AUB also offers the Eduroam service that allows students, faculty and staff to access the Internet from other universities around the globe, which are members of the Eduroam network, using their AUBnet account.
- **Computer Labs**
  There are several computer labs on campus which provide access to the Internet and a variety of other resources (such as printers) and applications (such as SPSS).
  Students may also request access to servers hosting applications such as Microsoft Office, special software for statistics and graphics, and various programming languages.
- **Microsoft Office**
  All current students can download the Microsoft Office 365 suite of applications on up to 10 devices (5 laptops and 5 mobile devices) free of charge. For more details, visit www.aub.edu.lb/it/.
- **Mobile App**
  AUB offers a mobile app that allows students to check course holds, grades, schedule, deadlines, academic calendar as well as program offerings. The mobile application also facilitates search for library books and articles as well as access to e-learning (Moodle), Instructor Course Evaluation (ICE) and the latest issue of MainGate.
- **IT Help Desk**
  Friendly and knowledgeable IT help desk specialists are always ready to support students, faculty and staff. For IT-related support, contact the IT help desk by email at it.helpdesk@aub.edu.lb, dial ext. 2260, or visit one of the many IT support locations on campus in person anytime Monday-Friday 8:00am-5:00pm (7:30am-3:00pm during summer hours).
  For more information, visit our website: www.aub.edu.lb/it.

Graduate Student E-mail Address

The University makes extensive use of electronic mail for communication and to keep in touch with students. To ensure that students receive timely communication and important announcements, the student's current email address must always be on file in the Hariri School of Nursing. Every graduate student is provided with an AUB Computer Account, which includes e-mail. It is strongly recommended that all graduate students use their AUB e-mail address as their primary one for the duration of the time they are studying here. This will help to prevent students missing announcements or other important communication from faculty and staff.

Bookstore

The University Bookstore is located at the back of Bliss Hall across from Penrose Hall. It stocks most of the required textbooks for specific courses, dictionaries, and other reference works, and a limited number of general publications. Assorted AUB items and gifts such as clocks, mugs, diploma, and picture frames, T-shirts, and binders are also on sale.

The Writing Center

For students who need assistance in writing papers or projects, the AUB writing center located in West Hall Room 307 provides assistance. Tutors from the Department of English are available Monday through Friday 9 am – 3 pm and consulting services are free. The extension to call for taking appointments is 3157.

University Health Services

Medical Records

An entrance medical record form will be sent to all admitted students who have made the commitment to enroll at AUB. It is to be completed by the student's family physician and mailed as soon as possible and before the period of registration in a pre-addressed envelope AUB provides. Alternatively the completed medical record form may be delivered by hand to the Office of Admissions.
All new students must have a tuberculin test at the time of the preliminary medical check, held during registration, and must report 48 hours later for the check on the test. Upon clearing the medical test, the student will be issued a clearance slip to proceed with registration. Students will not be registered unless they obtain this clearance slip. Students who report late for the medical check will be charged a late fee.
Medical checkups may be completed in advance of registration, provided that the student reports to the University Health Services on Campus and brings along a letter of acceptance and the entrance medical record.
Returning students are not required to complete any medical forms. Important changes in the student's medical condition and/or updating immunizations should be reported to a University Physician by appointment at the Health Services Center early in the first semester. Information will be kept confidential.

Health Insurance Plan (HIP)

The University Health Services (UHS) on campus provide medical care to members of the university community at large. Patients are seen Monday through Friday 8 am to noon and 1 to 4 pm in the Gulbenkian Infirmary located in the Sawwaf Building facing the Children Cancer Center in Lebanon. Appointments can be made at the reception desk in advance, either in person or by telephone between 8:30 and 4 pm. A physician is also available to receive patients on a walk-in basis. Such patients must have problems of an urgent nature; otherwise, they will be given return appointments for a later time. In case of emergency, the patient should report directly to the Emergency Unit at the Medical Center or to the nearest Emergency service or Physician.
Students may elect to enroll in the University's Health Insurance Plan (HIP, provided they register for at least six credit hours. Auditors are not considered students. A graduate student registered for a thesis is eligible to continue the HIP coverage for two consecutive years only.
Regular students enrolling For twelve months beginning with October registration , pay 514,000 L.L. .
For one semester and summer session beginning with February registration , pay 386.000 L.L.
Students enrolled in the Spring Semester are covered through the summer until September 30, provided they do not leave the University or drop all their courses.

A married student will have the option of including spouse and children at additional fees as outlined in the regulations for the Health Insurance Plan. A student may be exempt from enrolling in the HIP if he/she presents proof of coverage by another health insurance plan. HIP covers expenses incurred at AUB Medical Center exclusively. Medical bills from other institutions are not covered.
NSSF fee per student per year is 202.500 L.L.

National Social Security Fund (NSSF) Medical Branch

Membership in the NSSF is mandatory by Law for all Lebanese students excluding freshman and special students, and students who are older than 30 years. Non-Lebanese students may not join. To facilitate enrollment in the NSSF Medical Branch, students are required to bring the following items when registering:

- A social security application form filled correctly. Copies of this form will be available for distribution at the time of registration to students who have not completed it.
- A photocopy of their Lebanese Identity Card.
- Their NSSF number if already registered.
- The NSSF number of either parent if insured with the NSSF through father or mother.
- Family record is required of married students only.

Extra-Curricular Services

Nursing Student Society

The Nursing Student Society (NSS) brings together nursing students from all levels to engage in various professional and social activities, under the guidance of an assigned faculty advisor. Objectives of the NSS are to:

- Serve as an organization through which matters related to the welfare of students and the school is transacted.
- Provide a channel for coordination of activities between the students and faculty members, and with other student organizations.
- Organize activities that promote a spirit of loyalty and fellowship among the student body.
- Provide means for active participation in activities that foster the personal, professional and civic development of students.

The NSS has three standing committees:

1. The Educational Committee organizes educational programs of interest to the community.
2. The Social Committee is responsible for social and recreational activities.
3. The Publicity and Finance Committee is responsible for publicity and financial matters.

Clubs and Societies

Opportunities for students to participate in extra-curricular activities, generally organized under the auspices of student-governed societies or clubs are numerous. Membership is open to all registered students upon completion of an application and payment of a nominal fee. For further information or to obtain a list of active Clubs and Societies, go to the Department of Student Activities in the West Hall, extension 3182, or AUB Catalogue.

Athletics and Recreation

The University offers a wide range of sports, athletic and recreational programs through its Athletics Department. Facilities include AUB's Green Field, which hosts international, national, and varsity sports tournament. The Green Field includes the University's soccer field, light outdoor basketball courts, lighted outdoor volleyball courts and a lighted 450-meter track, in addition to the Charles W. Hostler center.

Student Housing
AUB is a residential University in the American liberal arts tradition. It was the first and still is one of the few residential universities in the Middle East offering a beautiful Campus where a rich extra-curricular and community life flourishes. Life in the AUB residence system offers a high degree of reliability. Dorm life in AUB establishes strong, supportive communities. For extra details, check AUB catalog.

Student Transportation
AUB allows limited automobile access to campus. Only students suffering from illness or disabilities may bring cars on campus. Authorization from Infirmary must be received before a permit can be issued, and then the student can contact Business Services at extension 3510 for a special permit.

Passports and Visas
Foreign students joining AUB must have passports valid for a period of not less than 13 months from the date of joining the University. They should also secure an entry visa to Lebanon from the nearest Lebanese Embassy or Consulate in their country. The Office of Students Affairs, in coordination with Personnel, the Office of Admissions, and the Office of Registrar, will help provide the necessary certificates for registered foreign students to acquire residence permits from the Lebanese authorities.

Mail Service
The University Post Office, located in the basement of Ada Dodge Hall, handles local campus mail and mail for the Lebanese postal services. To secure a campus mailbox a student must show a receipt of fee payment at the AUB Post Office.
Urgent mail may be sent by Aramex through the AUB Post Office. A special rate is offered to the AUB community. Also DHL offers special rates at the AUB Bookstore.

Food Service
The University operates a modern, cafeteria-style food service on the Campus in Ada Dodge Hall. Students have the option of using these food service facilities or eating elsewhere. In addition to the main cafeteria the University also maintains the Mary Dodge Hall Cafeteria, the Engineering Cafeteria, and the Agriculture Kiosk. These facilities provide a variety of hot and cold refreshments for students and their guests. Vending machines are available in a

number of University buildings and at the beach tunnel. You can also ty the Coffee Shop on the first floor of AUBMC, the hospital cafeteria or Lavazza café on the hospital's second floor.

APPENDIX B

GUIDELINES FOR THE MSN COMPREHENSIVE EXAM

A. To complete requirements for the Master of Science in Nursing, students must pass a comprehensive examination. To be eligible to take the examination, the student should have:
    a. Completed all core courses and most specialty courses.
    b. Be in good graduate standing.
    c. Met with his/her adviser to determine eligibility.

B. The comprehensive examination process:

    a. The examination will be taken after most of the course work is finished. Students are advised to take the comprehensive examination as early as possible, before beginning their thesis or project.

    b. There will be three examination questions which will be based on content from the MSN core courses (Foundations of Advanced Practice; Nursing Research); and the Area of Specialty.

    c. Two faculty members will read and grade each question blindly.

    d. A final grade of Pass is required to pass the exam. The grade of Pass will be given if the student passes all three questions.

    e. Criteria for grading will be based on knowledge of content, as well as evidence of critical and analytical thinking. The desired learning outcome is the synthesis and application of knowledge of advanced nursing practice.

    f. Students who receive PR (i.e. Unsatisfactory) on the examination may take it a second time after a period of at least three months.

Student name: _____ Date: _____

Paper:

1. Introduction to project development _____
    a. Brief overview of the project area
    b. Rationale for choosing the topic
    c. Relevance to the area of specialty

2. Description of the project components _____
   a. Clear review of literature (including leadership theory, functional area of project, etc……)
   b. Comprehensive plan for the project
   c. Organization of process implementation
   d. Measurable outcomes for evaluation

3. Scholarly written communication of the project _____
   a. Appropriate use of APA style
   b. Adequate English and grammar
   c. No evidence of plagiarism

4. Confidentiality/sensitive information (if applicable) _____

Oral presentation:

1. Clarity and organization of project _____

2. Appropriate use of audio-visual aids _____

3. Ability to answer questions effectively _____

4. Professional communication style _____

4. Professional demeanor _____

Research Focus & Areas of Interest

- Conceptualization and measurement of nursing and health phenomena
- Research expertise 'qualitative research methodologies, especially phenomenology, grounded theory, and Foucauldian discourse analysis; quantitative expertise Rasch analysis and applications of item response theory.
- Research interests 'empirical ethics, philosophy and ethics of mental health, national health policy, health services research, nurse education'

Ongoing Research

- From Education to Practice: The Challenges that Nursing Students and Novice Nurses Face in Lebanon
- Comparison of organizational research climates in universities in Lebanon, Canada and Australia: An initial study
- Lebanese students' perceptions of undergraduate preparation for transition to the role of the registered nurse
- Conceptions of genealogy in Foucault and Agamben
- Ethical considerations in Syrian refugee research in the Levant.

Research Interest

- A research trajectory focusing on CRC screening, participation, facilitators and barriers, and intervention studies to increase screening participation
- Capacity building for community health nurses. A multi-year, multi-phasic project aiming to empower community health nurses with training on the core competencies of a primary health care nurse
- Qualitative methodology consultation for various faculty at AUB-MC and other Lebanese universities.

Ongoing Research

- Community Health Assessment of Needs and Continuous Empowerment (CHANCE) - An experience-based co-design approach
- Informal Provision of Health Services for Syrian Refugees in Lebanon
- User acceptance of electronic patient portal (EPP) for self-management of diabetes and chronic high blood pressure at the Family Practice Clinic of the American University of Beirut, Lebanon
- Towards a Family - Practice Based Primary Care in Eastern Mediterranean Region: Roles and Functions of Nursing and Midwifery Workforce.
- Exploring the benefits and drawbacks of a new approach for managing conflict of interest in guideline development
- Evidence synthesis in Low & Middle Income Countries (LMIC): Assessing the capacity building needs of the Global Evidence Synthesis Initiative (GESI) Network centres
- Perceived factors influencing participation in Fecal Immunochemical screening test for colorectal cancer among the Lebanese population"
- Exploring the factors impacting the trust of the Lebanese public in physicians: a qualitative study
- Fellowship and Residency Research Program at AUBMC - Moving Forward
- Best practices to increase motivation and entering nursing: A Systematic review

WELCOME

Welcome to the Rafic Hariri Hariri School of Nursing (HSON). We are delighted that you have chosen to study nursing at AUB and look forward to meeting each one of you. This is an exciting time for nursing—both at AUB and throughout the world.

In the field of nursing generally, nurses are taking on new and greater responsibilities. Although taking care of patients is still our primary responsibility, we are also playing a role in setting health care policy at the national, regional, and international levels and researching important health care issues.

Here at AUB, we celebrated our 100th anniversary in 2005 and our 110th anniversary in 2015. We have introduced new programs and are constantly updating and revising our curriculum. Our graduates are in great demand and they are occupying leadership positions in different countries in the world. In 2007 the BSN and MSN programs were granted unconditional accreditation by the Commission on Collegiate Nursing Education (CCNE) in the USA for five years and in 2012 the programs were reaccredited for a period of 10 years. AUB Hariri School of Nursing is the first school to be accredited by CCNE outside the USA. In 2008 the HSON received a $10M gift to endow the school and the building and in 2009 the Rafic Hariri School of Nursing building was inaugurated. The building houses faculty offices, classrooms, an auditorium, a computer lab, skills and simulation lab, a research center, and student facilities.

In 2015, HSON won three major regional awards; HSON received the best institution award, Dr. Huda Huijer the distinguished researcher award, and an MSN graduate the best thesis award. The Chi Iota Honor Society Chapter, the first in the region, was formally chartered by Sigma Theta Tau International (STTI) in 2015 and 131 members were inducted into this prestigious honor society. In 2017, the PhD in Nursing Science program was fully approved to be formally launched in 2018-19. In 2018, AUB granted HSON independent Faculty status and appointed Dr. Huijer as founding dean of the school. We continue to be proud of these accomplishments and we look forward to working with you to celebrate these achievements. We hope this handbook will be a useful guide for you especially during the first couple of weeks when everything is so unfamiliar. If, however, you are lost or need help, please come and find us. We are eager to do whatever we can to make this a positive and rewarding experience for you.

We also welcome any comments or suggestions you may have on how we might change and improve on this handbook in order to make it more helpful for future Hariri School of Nursing students.

Good luck!

Dr. Huda Abu-Saad Huijer, RN, PhD, FEANS, FAAN
Dean, Hariri School of Nursing

Preface

This handbook has been prepared for graduate students in order to provide detailed information about the Master of Science in Nursing Program at the American University of Beirut. Guidelines and policy statements are given to assist in clarifying the process from entry to the program through graduation.

The MSN program in the Hariri School of Nursing was launched Fall 2003-2004. The curriculum with emphasis on Advanced Nursing Practice provides educational opportunities for nurses seeking further specialization.

The faculty and administration of the Hariri School of Nursing hope that the educational process at the American university of Beirut will be a rewarding and challenging experience for each student. We pledge ourselves to assist students in the pursuit of their professional and educational goals.

In addition to the policies found here that are specific to the Graduate Program at the Hariri School of Nursing, the student should obtain and keep a copy of the AUB Graduate Catalogue, which contains policies and procedures that apply to all graduate programs in the University.

The American University of Beirut

The American University of Beirut (AUB) is a private, non-sectarian institution of higher learning, founded in 1866. It functions under a charter from the State of New York and is administered by a private, autonomous Board of Trustees.

The University has five faculties: Arts and Sciences, Medicine-including the Hariri School of Nursing, Engineering and Architecture, Agricultural and Food Sciences, and Health Sciences. In addition to these faculties, the University has a School of Business. At present, AUB offers programs leading to both bachelor's, master's degrees and a number of PhD programs in some Arts and Science and Engineering majors. The University is co-educational. The language of instruction is English.

AUB is a teaching-centered research university, where excellence in teaching and research go hand-in-hand. Its mission is to enhance education, primarily the education of the peoples of the Middle East, to serve society through its educational functions, and to participate in the advancement of knowledge. AUB bases its educational perspective and methods, and its academic organization on the American model of higher education.

The university emphasizes scholarship that enables students to think for themselves, stresses academic excellence, and promotes high principles of character. It aims to produce men and women who are not only technically competent in their professional fields but also life-long learners who have breadth of vision, a sense of civic and moral responsibility, and devotion to the fundamental values of human life. The University believes in and encourages freedom of thought and expression. It expects, however, that this freedom will be enjoyed in a spirit of integrity and with full sense of responsibility.

General Information about the MSN Program

The Hariri School of Nursing at AUB offers the Degree of *Master of Science in Nursing* (MSN) with emphasis on Advanced Nursing Practice. Four tracks are available: Adult-Gerontology Clinical Nurse Specialist with optional minor in Nursing Education, Psychiatric Mental Health Clinical Nurse Specialist with optional minor in Nursing Education, Community and Public Health Nursing with optional minor in Nursing Education, and Nursing Administration and Management. This MSN program is designed to meet the health challenges of the 21st century in Lebanon and the region, and prepare students for continued studies towards PhD degrees. The clinical tracks prepare graduates as clinical nurse specialists.

The Hariri School of Nursing faculty members are renowned for their research, clinical expertise, innovative teaching strategies, and contribution to professional practice at the national level.

Mission Statement

The mission of the Hariri School of Nursing is to promote and maintain the highest educational standards of excellence, integrity, and professionalism in nursing, following the American model of nursing education and practice. The school aims to provide learning opportunities that will enable students to develop into competent nurses who respect cultural diversity while coordinating and delivering high–quality, compassionate nursing care in Lebanon and beyond, guided by ethical principles. The faculty believes education is an interactive process between faculty and students with both taking responsibility for active learning. The baccalaureate program, drawn primarily from the humanities, sciences, and caring disciplines, focuses on the use of nursing theory and research as a basis for practice. The master's program focuses on preparing nurses for advanced nursing practice roles. It is based on the use and generation of research-based knowledge to guide practice. Nursing students at AUB learn to think critically, develop professional attitudes and leadership skills, and appreciate the value of life-long learning and freedom of speech.

Philosophy

The Master of Science in Nursing Program is consistent with the philosophy of the American University of Beirut and the mission of the Hariri School of Nursing, and builds upon the knowledge and competencies that characterize the undergraduate program. Graduate education denotes the critical appraisal of concepts and theories basic to the Nursing discipline. The unifying focus in graduate education is specialized and research-directed nursing practice. Graduate education promotes the process of inquiry for the expansion and testing of knowledge; and fosters creativity, critical thinking, professional development, research**,** and leadership skills.

Learning Outcomes

The program provides students with a thorough understanding of the theoretical basis of practice and also incorporates managerial, administrative and educational skills. The graduate is expected to be an expert clinician, an informed educator, a knowledgeable researcher and a skilled manager.

Specifically, the MSN program will prepare nurses who:

1. Integrate theory and research in nursing and related disciplines as basis for advanced nursing practice and role development.
2. Participate in conducting research within collaborative teams to improve care outcomes and support policy changes
3. Deliver advanced practice nursing based on critical thinking, research evidence, and advanced knowledge and skills in specialized area of nursing.
4. Demonstrate advanced clinical and data driven decision-making across health care settings.
5. Analyze the impact of socio-cultural, economic, ethical, legal and political issues on nursing practice, health promotion strategies and health care delivery.
6. Assume leadership roles in education and management, utilizing inter-and intra-disciplinary approaches and systems thinking.
7. Analyze current and emerging technologies to optimize patient safety, cost-effective care, and quality and health outcomes'.

Admission to the MSN program

A student is eligible for consideration for admission to the MSN program if s/he fulfills AUB admission requirements for graduate studies. The criteria for admission to the MSN program are:

1. Meeting all the university admission requirements to graduate studies.
2. Having a BSN degree or its equivalent from an accredited/recognized institution.
3. Having a cumulative undergraduate average of at least 75, with an undergraduate average of at least 80 in the major Nursing.
4. Demonstrating evidence of knowledge and competence in physical assessment skills (for the clinical tracks).
5. Satisfactory scores on the English Entrance Exam or Test of English as a Foreign Language, as per AUB requirements for graduate studies.
6. License to practice nursing from country of residence.
7. One year work experience in nursing.

Categories of Admission

Applicants for graduate study may be considered for admission in one of the following categories:

Graduate Regular
A candidate qualifies for this category if s/he holds a bachelor's degree from AUB or an equivalent degree from another recognized institution with an undergraduate average of at least 80 or its equivalent in nursing.

Graduate on probation
Candidates who fail to meet any of the admission requirements but who, in the opinion of the faculty, demonstrate potential for graduate study, are admitted as 'graduates on probation.' Students with a cumulative undergraduate average of at least 75 but less than 80 in the major field (nursing) may be conditionally admitted as graduate student on probation. These students should score 80 or above in the first nine graduate credits in order to be transferred from special status to regular status.

Readiness for University Studies in English (RUSE)

Upon admission to AUB and prior to registration, students admitted to AUB must demonstrate a level of English proficiency consistent with the demands of a program carried out almost exclusively in the English language. This should be done as early as possible (in general, no later than 1 month prior to the start of the semester) by submitting official test scores for (at least) one of the following tests listed in the below RUSE tables for undergraduate or graduate admissions. Students joining AUB at the undergraduate level should reference the "Undergraduate RUSE" table while students joining AUB at the graduate level should reference the "Graduate RUSE" table.

Please note that some applicants might be exempted from the RUSE requirements; such exemptions are listed in the "RUSE Exemption" table at the end of this page.

Graduate RUSE: Applicable to students joining AUB at the graduate level

Summer Preparatory English Program (UPGR 001)	Graduate candidates who have not met the English language requirements or who have not yet taken any English test, have the option of registering in a 7-week intensive English summer preparatory program. You may check the program details (Description, Learning Outcomes, Requirements, Course Registration and Timeline) at the University Preparatory Program (UPP) - Graduate Course site.						

Transfer of Credits

School of Nursing

Transfer of Credits from One Master's Degree to Another Graduate courses taken at AUB (or at other recognized institutions), in which the applicant earned an equivalent grade of 80 or above, may be transferred to another master's degree at AUB. No more than 9 credits are transferable provided they are not credits earned by an internship, thesis or practicum, and degree minimum residency requirement is maintained. Approval by the department or the academic unit concerned and the Faculty/School Graduate Studies Committee is required for all transfers. Normally, credits counted toward another graduate degree at AUB or another institution cannot be transferred if they have already been used to satisfy requirements for another awarded graduate degree.

Graduate Council

The Graduate Council (GC) reports to the Provost of the University and plays a vital role in implementing the rules and regulations governing graduate work uniformly across the University, in accordance with policies approved by the Board of Graduate Studies (BGS) and the Senate, and as recommended by the faculties and schools. The Graduate Council facilitates and coordinates graduate education and follows up on the implementation of graduate policies and deadlines. The Graduate Council works closely with the BGS and Faculty Graduate Studies Committees to provide mechanisms for the quality control of all aspects of graduate education. In cooperation with faculty, students, and staff, the Graduate Council undertakes preparatory steps and coordinates graduate recruitment programs to ensure a selection process from a highly qualified pool of student applicants; provides information about admissions to all graduate programs; administers graduate standards of scholarship and policy; and encourages the development and success of students through workshops, training activities, counseling, and initiatives that promote timely degree completion. The Graduate Council also administers AUB policies concerning graduate assistantship appointments.

Registration

Academic Year
The academic year at AUB includes two semesters, fall, and spring, followed by a summer session. Each semester has a reading period and a final exam week. For the exact dates, see the AUB Calendar.

Orientation
All entering students attend the three –day orientation program consisting of meetings in Faculties and Departments; meetings with representatives of various university services; tours of the campus; Agriculture Research and Educational Center (AREC), and the country; and acquaintance social events.

Course Registration

New students register on-line via the Internet during August/September at a date indicated at the University Registrar for the fall semester of an academic year.
Check details of on-line registration under Course Registration for New Students and Consult the Registration Guide available in the Office of the Registrar.
Continuing students will register before the end of each semester for the upcoming academic semester. The registrar announces all registration dates.

Deferred Registration
Graduate students who are offered admission in the Fall semester and who do not register for that semester may be eligible for admission to the following Fall semester of the, pending availability of places. A petition should be submitted to the Office of Admissions.

Late Registration
Students unable, for some unforeseen reason, to register at the scheduled time may attempt late registration. A late registration fee of LL150, 000 for students will be charged late registration is to be avoided, as many courses may become full.

Drop and Add
After the start of classes, at a date indicated in the University Registrar, students may make changes in their schedules through a process known as Drop and Add. After obtaining the approval of their advisers, students may make changes in their courses on the web according to a pre-announced schedule. They may need to settle their accounts at the Office of the Comptroller.

Fees and Expenses

The American University of Beirut is a non-profit institution. The charge to students is kept at the minimum consistent with the provision of high quality instruction and adequate resources. The University reserves the right to change any or all fees at any time without prior notice. Such changes will be applicable to students currently registered in the university as well as to new students.
Students will not be permitted to enter classes at the beginning of the term until their fees are paid or special arrangements have been made with the university comptroller. All fees are quoted in Lebanese pounds and US dollars.

Payment of Fees
Each AUB student must pay all his/her tuition fees and other charges levied.

1. All students must finalize registration, including payment of tuition fees and other charges according to the academic calendar for the first and second semesters. Under special circumstances, late registration will be permitted during a period of no more than five working days after the announced deadline, but subject to a late registration fee.
2. Students who demonstrate financial need may make formal application for deferred payment arrangements for tuition fees only to the Office of the Comptroller according to the academic calendar for the first and second semesters. No applications for deferrals will be accepted thereafter. Deferred payments are not a right and will only be agreed to under specific and special circumstances. Students who arrange for deferred payments are still required to complete all registration formalities within the set deadlines. Deferred payment arrangements are not permitted for the summer session in any faculty.
3. A graduate student who applies for deferred payment must pay at least 50% of the net amount of tuition due. All other charges must be paid in full with no deferrals. A student must pay a deferred payment application fee of $33, whether approved or not. Should the student's application be approved, the student must pay the balance, plus a deferred application fee of $33, together with the late payment fee, if applicable. All the above arrangements must be concluded by the announced deadlines.
4. Every student granted deferred payment must sign a statement indicating agreement that failure to complete payment by the set deadline will result in receiving no credit for the semester in which the student has defaulted on payment.

Students are expected to meet all financial obligations by the appropriate due date. The university reserves the right to place an encumbrance on the student's record, which will prevent registration for future semesters and the release of transcripts and diplomas, as well as access to other university services by any student who fails to promptly meet his/her financial obligations to the university. It is each student's responsibility to be informed of all registration and payment dates and deadlines.
Up-to-date schedules for registration and payment of fees may be obtained from the Office of the Registrar (ext: 2570 /2571), or at the e-mail address: registrar@aub.edu.lb

Academic Rules and Regulations

Categories of Students

To be considered a full-time student, a student must carry a minimum load of 9 credits per semester. For summer full-time, the required load is 6 credits. Students can normally register for up to 12 credits per semester and 6 credits during the summer session. The category of part-time students applies to those carrying less than 9 credits per regular semester or less than 6 credits for the summer.

Supervision

Each student has an academic adviser who must approve the student's schedule each semester. The student's adviser is appointed by the graduate faculty of the school. These advisers will maintain their relationship with the students until they graduate from the graduate program.
Every academic adviser is expected to guide and help in planning the student's course of study. Not all courses need to be in nursing, but they should be in the judgment of the department relevant to the field in which the student is specializing. For students working towards a thesis, a thesis adviser is assigned who must be a full-time faculty member and will serve as chairperson of the thesis committee. The thesis adviser and the members of the thesis committee should be of professorial rank.

Attendance

- Students are expected to attend all classes, laboratories and any required activities. Absence of students, whether excused or not, from any class or laboratory session does not excuse them from their responsibility for the work done or for any announcements made during their absence.
- Students who absent themselves during a semester more than ***one third*** of the number of hours of any course lose all credit for the course.
- Students may *not* be excused from laboratory and field requirements. All missed clinical and field requirements must be made up. In case of repeated absences from clinical courses, ***over one third of the total hours***, the student may be asked to drop the course.
- Students who fail to sit for scheduled examinations, or fail to fulfill course requirements, will be given the minimum grade for graduate courses, which is 55. Results of tutorial courses, clinical and administrative residencies, projects, or theses will be reported as pass (P) or fail (F).

Examinations and Quizzes

Students may not absent themselves from announced final examinations and quizzes unless they present an excuse considered valid by the coordinator of the course. The course coordinator may then require the student to take a make-up examination.

Computer Literacy

Masters students are expected to have a basic level of computer literacy. Ability to use Microsoft Word, Power Point and spread sheets software is a minimum requirement, since most courses require term papers and oral presentations. For students who are weak in this area, a

number of workshops on the use of various computer programs are offered regularly by the Academic Computing Center, accessible through AUB website, or by calling 2260 or 3580. Students must also know how to do electronic literature searches using databases such as MEDLINE and CINHAL. The Saab Medical librarian offers regular sessions Mondays at 6 pm, or per request about searching the literature. Call Miss Aida Farha at 5911 for further questions.

RCR Requirement

The Responsible Conduct of Research (RCR) Requirement must be completed by all newly admitted degree seeking graduate students, both at the Master's and PhD levels. The requirement includes prospective graduates and graduates admitted on probation.

The requirement is fulfilled by in the RCR course section determined by the student's respective Faculty and department/program. RCR courses "cover core norms, principles, regulations, and rules governing the practice of research." Topics include research misconduct, data management, authorship, peer review, mentoring, using animal subjects in research, conflicts of interest, collaborative research, and research involving human subjects. Additional topics may be included according to research discipline.
The requirement must be fulfilled within the first month and is marked by a passing grade. Failure to fulfill the requirement in a timely manner results in a registration hold that is removed once the student has fulfilled the requirement.

Courses and Grades

Courses taken as part of a student's graduate study program fall in one of two categories: graduate or prerequisite, with different grading systems.

- *Graduate Level Courses*
  Graduate level courses in Nursing are numbered 500 and above. The minimum passing grade for a graduate course is 70. However, students are required to maintain a cumulative average of at least 80 in all courses taken for graduate credit. Projects, thesis and residency courses are graded as Pass/Fail.

- *Prerequisite Courses*
  These are usually undergraduate courses taken to make up for any deficiencies in the student's background. They do not carry graduate credit. The minimum passing grade for a prerequisite course is 70.

Grading System

Evaluation of the student's achievement will include their work in theory, practice, as well as professional attitudes and behavior.

In the Hariri School of Nursing the following grading system is used:

Cumulative Average	GPA	Cumulative Average	GPA	Cumulative Average	GPA	Cumulative Average	GPA
‹60	0	67	1.86	75	2.73	83	3.46
60	1	68	1.98	76	2.82	84	3.54
61	1.13	69	2.09	77	2.92	85	3.63
62	1.26	70	2.2	78	3.02	86	3.7
63	1.38	71	2.31	79	3.11	87	3.78
64	1.5	72	2.42	80	3.2	88	3.86
65	1.63	73	2.52	81	3.29	89	3.93
66	1.74	74	2.62	82	3.38	›=90	4
I Incomplete							
P Pass Normally Used for Theses and Projects							
PR In Progress							
W Withdraw							
F Fail							

All final grades are expressed in multiples of one.

Incomplete Grades

A student who has an incomplete on one course must complete the work required for the course within one month of the start of the next regular semester. In exceptional circumstances the graduate committee may decide to give the student additional time to complete the course. Incomplete course work will be reported as “I” that is followed by a numerical grade reflecting the evaluation of the student available at the end of the semester. This evaluation is based on a grade of zero on all missed work and should be reported in units of five. If the work is not completed within the period specified, the “I” is dropped and the numerical grade becomes the final grade.

Probation and Dismissal

A student working towards a master’s degree in Nursing “MSN” may be placed on probation by the Hariri School of Nursing Graduate Committee if he/she:

- Is admitted to graduate study on probation,
- Fails in any course taken for graduate credit, and
- Does not maintain the required cumulative average of 80.

The probation may be removed upon the recommendation of the Graduate Studies Committee of the School if the student has completed a minimum of 9 credits of graduate level courses within the two consecutive semesters after being placed on probation, has passed all courses, and has obtained the cumulative average of 80. If the student fails to meet any of these conditions, s/he will be dropped from the program.

The Graduate Studies Committee may discontinue a master’s student from graduate study if:

- Probation status is not removed within a period of two semesters in which the courses that are taken are for credit, or

- In the opinion of the department, and irrespective of the grades obtained, the work of the student is deemed unsatisfactory, or
- The student fails the comprehensive examination twice, or fails the thesis defense twice.

Leave of Absence

- All graduate students are expected to make steady and satisfactory progress toward the completion of degrees. Students who are not enrolled for a period of more than one academic year (two consecutive regular terms and one summer) will be considered to have withdrawn from the program unless they apply for a leave of absence and secure approval of the department, School Graduate Studies Committee, and Graduate Council.

- The leave of absence application can be up to one academic year at a time. The maximum period of approved leave of absence is for two academic years. An approved leave of absence does not count towards maximum residency. Non-enrollment by the student for one semester without securing leave of absence will count towards maximum residency.

- Students who seek to return without having secured leave of absence approval after a non-enrolment period of 12 months must reapply and will be considered for readmission following regular AUB application/admission procedures. If re-admitted into the same graduate program, then their earlier status as graduate student will count towards maximum residency.

- The Leave of Absence Application Form should normally be submitted to the respective department/faculty at least one month prior to the beginning of the semester in which absence is planned. The form can be downloaded from the following site:http://www.aub.edu.lb/graduatecouncil/Pages/regulationsandforms.aspx

Readmission

The following factors govern students seeking readmission:

- Students in good standing who withdrew voluntarily shall be granted readmission to the School if the period between the end of the semester or session of withdrawal and the beginning of the semester for which readmission is sought is not more than four regular semesters. The readmission request must be submitted to the Office of the Registrar at least one month prior to the beginning of the semester or the summer session to which readmission is sought.
- Students who have left the university for more than two years must submit the readmission request to the Office of the Registrar and must have the approval of the Admissions Committee of the Hariri School of Nursing.
- Students who have left the School while on probation will remain on probation for one semester and have to clear the probation status at the end of a regular semester, or else they will be dropped from the School.

Masters' Completion Program

Overview of the Curriculum

The curriculum includes 37 to 40 credits (depending on the track of study) and may be completed in two years on a full-time basis. Part time students must complete the program requirements within a maximum period of four years. Extension beyond the maximum allowed period of study requires the approval of the Graduate Studies Committee of the faculty and the Graduate Council.
The components of the master's program include: 1) Core courses, 2) Specialty courses, and 3) Elective Courses. The Hariri School of Nursing offers the MSN degree in the following four tracks:

1. Adult-Gerontology Clinical Nurse Specialist (39 credits), with an optional minor in Nursing Education,
2. Nursing Administration and Management (37 credits)
3. Psychiatric Mental Health Clinical Nurse Specialist, with an optional minor in Nursing Education.(40 credits)
4. Community and Public Health Nursing, with an optional minor in Nursing Education (40 credits)

Both thesis and non-thesis options are available in all tracks. Below is a general description of the courses required for graduate education in nursing. Students may receive credit for graduate level courses only. Appendix A provides sample study plans for students in the various tracks for full time and part time study.

Curriculum Masters of Science in Nursing

Core Courses		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
NURS 500	Theories, Concepts and Ethical frameworks for Advanced Nursing Practice	2	0	2
NURS 501	Advanced Nursing Practice: Scope and Roles	2	0	2
NURS 530	Statistical Reasoning and Application in Nursing Research	1	2	2
NURS 502	Advanced Nursing Research	3	0	3
NURS 527	Systems Approach to the Development and Evaluation of Health Care Services	3	0	3
Concentration Courses		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
Adult-Gerontology Track				
NURS 503	Advanced Health Assessment	2	3	3

NURS 504	Advanced Pathophysiology	3	0	3
PHRM 314	Advanced Pharmacology and Therapeutics	3	0	3

EPHD 300	Principles of Epidemiology	3	0	3
NURS 522	Principles and Practice of Community Health Nursing	2	3	3
NURS 523	Advanced Community Assessment	2	3	3
NURS 524	Clinical Residency in Community Health Care (residency)	0	16	4
	Electives	-	-	0-3
Minor in Education				
EDU 318	Test Construction in Education	3	0	3
EDU 326	Theory and Design of Curriculum	3	0	3
NURS 509	Role development in Nursing Education	3	0	3
	Elective in education	3	0	3
Thesis/Project				
NURS 599 or	Thesis	–	–	6
NURS 598 and	Project	–	–	3
Elective		–	–	3
NURS 526	Comprehensive Exam	-	-	0

Students may take an equivalent of 3 credits as elective in any major that helps them with their studies. For students doing a minor in nursing education, the elective credits must be in education.
The Hariri School of Nursing also offers special topic courses ranging from 1 to 3 credits that cover nursing issues of interest to students in the various tracks. These courses can be counted toward the elective credits.

Course Description

NURS 500 Theories, Concepts and Ethical Frameworks for Advanced Nursing Practice 2.0; 2 cr.

This course introduces students at an advanced level to conceptual resources for advanced nursing practice. The course is organized around four themes: conceptions of science and nursing knowledge; antecedents and applications of theories relevant to nursing practice; healthcare ethics; and, nursing and politics. The course focuses on the application of conceptual models to current and future nursing practice.

NURS 501 Advanced Nursing Practice: Scope and Roles 2.0; 2 cr.

This course provides the student with knowledge related to the advanced practice roles and competencies. Students develop a vision and structure for Advanced Nursing Practice that includes the Consensus Model for Advanced Practice Registered Nurse, regulation, credentialing, and emerging professional issues. The course concentrates on the foundations and philosophy of care in different specialties and health care.

NURS 502 Advanced Nursing Research 3.0; 3 cr.
This course focuses on complex research designs, interpretation of research findings and development of research proposals. The interrelationship of theoretical frameworks, quantitative/qualitative design, sample selection, data collection instruments, and data analysis are analyzed in terms of clinical nursing research problems.

NURS 503 Advanced Health Assessment 2.3; 3 cr.
This course focuses on the advanced comprehensive assessment of individuals using a case based approach. Students are provided with advanced knowledge and skills in clinical interview, focused history taking, psychosocial and physical assessment, and diagnostic reasoning.

NURS 503A Advanced Health Assessment for Mental Health 1.0; 1 cr.
This theory course focuses on the comprehensive health assessment of clients using a biopsychosocial approach. Mental health students will build on their knowledge and skills in clinical interviewing, focused history taking, and critical analysis of client data to identify actual and potential health problems. The focus will be on the differential diagnosis of various case presentation with organic and psychological etiologies.

NURS 504 Advanced Pathophysiology 3.0; 3 cr.
This is a course in advanced pathophysiology related to acute and chronic illnesses experienced by adults. Emphasis is placed on pathophysiologic nursing phenomena experienced across diseases, their manifestations and assessment measures. Case studies are used to illustrate application to advanced nursing practice.

NURS 505A Advanced Practice in Adult-Gerontology I 2.8; 4 cr.
This course builds on N504 & N503 and includes a theory and a clinical component. Emphasis is on further refinement and extension of pathophysiological concepts and assessment skills in the management of clients with a spectrum of health problems. Health promotion and risk reduction strategies are also addressed. *Prerequisite: NURS 503*.

NURS 505B Advanced Practice in Adult-Gerontology II 2.8; 4 cr.
This course addresses advanced nursing practice in adult care and includes a theory and a clinical component. Emphasis is on further refinement and extension of pathophysiological concepts and assessment skills in the management of adults and older adults with acute and critical care conditions. . *Prerequisites: NURS 503 and NURS 504*.

NURS 506 Advanced Practice in Adult-Gerontology III 0.16; 4 cr.
This is a practicum in which students apply content learned in NURS 503, 504, 505and 515, and use concepts learned in NURS 501 and PHRM 314, in the advanced management of adult clients with various illnesses. Interdisciplinary collaboration, research utilization, educational activities and case management are emphasized in a specialty area of practice. *Prerequisites: NURS505B and PHRM 314.*

NURS 507 Essentials of Nursing Administration and Management 2.0; 2 cr.
This course introduces management concepts and techniques. It focuses on three core topics: roles and responsibilities of managers; leading organizational effectiveness; and strategic planning. The focus is on using management models and concepts to work towards improved organizational effectiveness. Case studies of organizational problems provide the basis for group practical work.

NURS 508 Advanced Practice in Nursing Administration 0.16; 4 cr.

This practicum focuses on developing advanced management and administrative nursing skills in hospitals and primary health care settings. *Prerequisite: NURS 507.*

NURS 509 Role Development in Nursing Education 3.0; 3 cr.
This course addresses principles of teaching and learning, instructional methods, test construction and use, as well as curriculum and program development as applied to nursing. The course enables students to apply educational theory and research in various settings such as schools of nursing and staff development centers. **Required for the minor in education.**

NURS 512 Advanced Psychiatric and Mental Health Assessment 1.3; 2 cr.
This course focuses on the advanced comprehensive mental health assessment of individuals using a case based approach. Students are provided with advanced knowledge and skills in clinical interview, focused history taking, mental status examination and diagnostic reasoning. The student performs comprehensive assessment and D.S.M. IV diagnosis on adult populations.

PHRM 314 Advanced Pharmacology and Therapeutics 3.0; 3 cr.
This course covers pharmacology and drug therapy related to advanced nursing practice. General principles of pharmacokinetics pharmacotherapeutics, pharmacogenetics and considerations for special populations are covered. Classes of drugs, their mechanism of action, drug selection, dosage, therapeutic and adverse effects, and patient monitoring are discussed using case studies of clinical conditions. *Students are required to have taken pharmacology at the undergraduate level before PHRM 314*.

NURS 516 Psychopathology and Human Behavior 3.0; 3 cr.
This theory course examines the effects and/or sequels of alterations in selected bio-behavioral processes in the adult human suffering from illnesses with critical onsets and long-term unstable conditions. It focuses on the study of the brain and behavior and the neurological, physiological and biochemical foundations of cognition, mood and affect. Students will be exposed to advanced assessment skills, selected theories and research to identify complex psychiatric disorders and interventions utilizing case studies.

NURS 517 Models of Treatment-Psychotherapy 1.6; 3 cr.
(Bio-behavioral Nursing Interventions)
In this course, students learn the models of treatment of psychiatric and mental health disorders, and become trained on psychotherapeutic interventions in acute settings. Theories on individual psychotherapy, crisis intervention, group and family therapy are covered. This course has a clinical component where students do practicum in a psychiatric care department. In this course students learn the application of the acquired knowledge in the field of practice and start to practice their role.

NURS 518 Group and Family Psychotherapy 1.6; 3 cr.
This course is complementary to the “Models of Treatment” course, and it focuses on group and family psychotherapeutic interventions. Students synthesize knowledge of theories in the provision of care to groups and families with complex psychiatric problems. Family and group intervention strategies are discussed in a variety of settings. Students explore the practice of these interventions in psychiatric care departments.

NURS 519 Clinical Residency in Acute Psychiatric Care 0.16; 4 cr.
The purpose of this clinical practicum course is to provide opportunities for students to apply the content learned from courses. Students will use assessment skills, selected theories, and research to identify complex health problems and interventions for diverse populations. The focus

is on advanced case management and practice of the role, which is further developed as the student integrates theory and practice skills in acute and chronic or community settings. Students will spend 224 hours of clinical hours under the supervision of a preceptor.

NURS 520 Managing Quality With Teams 3.0; 3 cr.
This course addresses theory and application of quality teams, their composition, purposes, function, and decision making tools. Process improvement team and the use of mapping processes for process improvement are a main focus.

NURS 522 Principles and Practice of Community Health Nursing 2.3; 3 cr.
This course introduces concepts and issues relevant to the advanced practice of public and community health nursing. Areas of focus include health promotion, management of chronic disease and health education. The course will use case studies in class and field work in the community.

NURS 523 Advanced Community Assessment and Interventions 2.3; 3 cr.
This course focuses on the nursing assessment of the health of communities using a case based approach. Students are provided with advanced knowledge and skills in population and individual needs assessment and community based interventions. Clinical experience will be provided.

NURS 524 Clinical Residency in Public and Community Health Care 0.16; 4 cr.
The purpose of this clinical course is to provide students with opportunities to apply content learned in community courses, with a focus on advanced case management and health promotion. Assessment skills, theories and research will be utilized in identifying health problems and planning community interventions. *Prerequisites: NURS 522 and NURS 523.*

NURS 525 Leadership Theories and Applications for Nurse Managers 3.0; 3 cr.
The aim of this course is to promote familiarity with, critical thinking about, and applications of evidence-based theories of leadership in nursing settings. The course encourages a reflective and analytical approach to cultivating effective personal leadership behaviors. The course introduces the full spectrum leadership model, examines its transformational leadership components in depth, and explores similarities and differences between transformational leadership and related leadership theories.

NURS 527 Systems Approach to the Development and Evaluation of Health Care Services 3.0; 3 cr.
The purpose of this course is to introduce students to the development and implementation of health service programs/projects intended to improve health care, practice, and health system's outcomes. The course addresses assessment of contemporary issues affecting health such as those of the epidemiology of diseases, healthcare policies, socio-cultural, geo-political, and economic. It focuses on the theory and practice of planning from a system's perspective and introduces conceptual approaches and techniques of program evaluation. Students will prepare a project plan as part of the course.

NURS 526 Comprehensive Exam 0 cr.

NURS 530 Statistical Reasoning and Application in Nursing Research 1.2; 2 Cr.
This class introduces students to the basic concepts and applications of statistics for nursing research and how to carry these applications using SPSS. The primary objective of the course is to provide students with the skills necessary to understand basic statistical analyses and carry

out those analyses using SPSS. Descriptive, bivariate and linear multiple regression are covered.

NURS 531 Practical Applications of Budgeting in Nursing 1.0; 1 cr.
This course focuses on practical applications of concepts in budgeting and basic financial management. Participants will learn to develop a budget and evaluate the financial status of a department or operating unit and determine what, if any, corrective actions need to be taken. The course presents various analytical methods in management decision making, including variance analysis, and break-even analysis.

NURS 533 Advanced Health and Nursing Informatics 3.0;3 Cr.

This course helps students acquire a foundational and practical understanding of the discipline of health informatics. It introduces health informatics concepts and competencies utilized in monitoring and evaluating nursing practice. The course examines the use of digital tools to foster engagement of patients, families and consumers in their health care. Emphasis is also placed on how Electronic and Personal Health Records can facilitate health information exchange.

NURS 598 Project 3 cr.
Special projects directed toward acquiring skills needed in the development of programs relevant to nursing care within the student's area of interest. Projects vary depending on the track of study.

NURS 599 Thesis 6 cr.

Below are courses in other faculties that students in the Nursing Administration and Management track and Community and Public Health Nursing track can take:

HMPD 302 Health Management & Policy (3 credits): The course focuses on the managerial and planning skills needed by all public health graduates. The course is designed to introduce students to policy making; the role of private and public sector planners, decision makers and administrators in the policy-making process; policy/program implementation; management; and evaluation.

HMPD 311 Health Information Systems (2 credits): This course will introduce basic concepts of information systems, with an emphasis on applications in the management and operations of health care organizations.

HMPD 315 Performance Improvement (3 credits): The course examines the two dimensions of the service delivery process; the provider, and the service. In this context, the course consists of two interrelated modules emphasizing the role of human resources management and service excellence in improving the performance in health care settings.

HMPD 325 Quality Management and Accreditation in Health Care (2 credits):
A course that examines at multiple levels the theory and practice of quality management and accreditation in health care organizations. The objectives of the course are to: (1) convey an understanding of quality of care, with particular attention to conceptual framework for continuous quality improvement, quality assessment, improvement and patient safety including approaches, methods and tools, (2) explain how to develop a quality improvement plan, performance indicators and measurement systems for quality and accreditation; and (3) address ethical

issues related to quality management, risk management and patient safety with particular attention to Lebanon and the region.

HMPD 342 Financial Management and Accounting (3 credits): The course covers the basic skills of modern financial management and accounting, and the utilization of its concepts and tools to make decisions in health care organizations

MNGT 330 Total Quality Management (3 credits): An advanced analytical account of TQM as a modern management philosophy and program for achieving and sustaining customer satisfaction. Relevant TQM knowledge base will be highlighted with emphasis on the executive role and intensive use of practical applications.

MNGT 332 Human Capital Management (3 credits): An advanced analysis of the human resource function and the challenge of managing human capital in a modern corporation. The course highlights the interrelationships of the different human resource management functions and the strategic role of the HR in today's environment, and capitalizes on new trends and actual case examples to illustrate current HR best practices. **Required in the nursing administration and management track.**

MNGT 340 Organization Theory (3 credits): An analytical overview of management thinking with special emphasis on concept-formation, methodology, organizational models, management functions, processes and major schools of thought.

EPHD 300 Principles of Epidemiology (3 credits): A course in principles, concepts and applications of epidemiology in the public health field. The course consists of lectures, assigned readings and complementary practical sessions that provide students with basic epidemiological knowledge and tools relevant to public health practice. Students are given the opportunity to acquire an understanding of the vocabulary of epidemiology and methods of epidemiological research, investigation and control. Topics covered include rubrics of epidemiology, morbidity and mortality measures, sources of epidemiological data, outbreak investigation, epidemiological study designs, causal inference and causation in epidemiology. This course also covers an overview of the major biological agents associated with infectious and communicable diseases with a focus on disease ecology, etiology, transmission and contagion modes. **Required for the Community and Public Health Nursing Track students.**

Minor in Education. *Possible Courses include:*

EDUC 301 Seminar in the History and Philosophy of Education (3 credits*):* Development of educational thought and practice through primary sources. Systems of educational theory will be examined from the age of Pericles to post World War II, with special emphasis on contemporary educational practice. *Annually.*

EDUC 315 Psychology of Education (Advanced) (3 credits): A comprehensive analysis of instructional theory, measurement skills, cognitive development, learning theory, and methods of applying behavior modification in the classroom*. Prerequisite: EDUC 215. Annually.*

EDUC 326 Theory and Design of Curriculum (3 credits): Examination of organization, scope, and sequence of curricula with special emphasis on various approaches to curriculum development. *Annually.* **Required for the minor in education.**

EDUC 318 Test Construction in Education (3 credits): Development of testing techniques and skills for appraisal of the cognitive and affective objectives of instruction. *Alternate years*. Other possible courses include EDUC 303, 313, & 330. **Required for the minor in education.**

Comprehensive Examination

Students are required to sit for a written comprehensive examination according to AUB regulations. The purpose of this exam is to assess the students' overall synthesis of all the components of the Master's degree program, i.e. integrating of theory, practice, and research.
The student must pass the comprehensive examination after completion of most of the course requirements for the MSN degree. Students must register NURS 526 (zero credit course) the semester during which they plan to take the comprehensive exam. Students must take the comprehensive exam before doing their residencies and projects, except full time students who may take it concurrent with their project or residency. The Graduate Committee of the Hariri School of Nursing shall set the timing of the examination. The student who does not pass the comprehensive examination may take it a second time after a period of at least three months. See Appendix B. **The comprehensive examination is offered twice per year (November and April); dates are announced early during the academic year**.

Thesis/Project

Two types of master's degree programs are available:

- *A master's program requiring a thesis* based on independent research work. Students following this program are required to present a 6 credit thesis, in addition to completion of the courses required in the track of study.

- *A non-thesis master's program*: The student following this program is required to do a 3 credit hour project that should be approved by the student's advising team and the Graduate Studies Committee, in addition to completion of the courses required in the track of study.

For those students enrolled in the MSN with thesis option, the student must submit a thesis based on original, independent research. The thesis must be in English. An abstract not exceeding 350 words must be submitted with the thesis. Once approval for writing the thesis/project is granted, students must conform to the University Thesis Manual found in the library. Application of the thesis manual is mandatory, and those not conforming to its requirements will not be accepted. The student must submit copies of the thesis to the members of thesis committee, unbound but ready for binding, at least two weeks before the thesis defense. The thesis manual guidelines are available at http://website.aub.edu.lb/ulibraries/Documents/ThesisManual/thesis-manual.pdf

Guidelines for Thesis and Project

All MSN students are required to develop a scholarly product that contributes to the generation or application of knowledge to enhance practice, education, theory or policy. The student should negotiate the scope and objectives of the product with the faculty advisement team. For a thesis, the advisement team would be the thesis committee. For a project, the team would include the student's adviser and a second reader. The composition of the project advisement team shall be approved by/communicated to the program coordinator.

MSN students need to declare their choices of the thesis/project soon after enrollment, preferably making specific plans about the thesis/project by the time they have completed 12 credits so that this requirement can be completed in a timely manner.

The AUB HSON utilizes the writing guidelines of the American Psychological Association (APA) 6th Edition in all written requirements such as term papers of courses. The link below provides adequate guidance for how to organize papers, cite references inside the text and display the reference list using the APA style:

https://owl.english.purdue.edu/owl/resource/560/01/

Project

Project types assume comparable levels of student involvement, performance and scholarship. Projects must be over and above papers and projects completed for course requirements. Options for the project include:

1. **Report of Research Findings**: students may use existing data under a faculty member's guidance to prepare a scholarly paper of publishable quality.
2. **Research Experience**: Active participation in a Faculty member's project with hands-on experience in phases of the project, like writing a proposal, design of the study, data collection, data analysis and reporting of results. The product of this experience would include a summary of the student's learning in the experience, a description of the student's contribution to the project, and a paper on a topic relevant to the project.
3. **Innovations in Practice**: These may include:
    a. **Research Utilization**: Development of an action plan for research utilization in targeted areas. This includes development of the associated clinical protocols/clinical practice guidelines and plans for implementation and evaluation.
    b. **Small needs assessment studies for program development**.
    c. **Educational Media**: Development of an instructional media project or web-based instruction and demonstration of the appropriateness of the product to a specific audience.
4. **Policy Development or Analysis:** This may include:
    a. **Organizational/ Institutional Studies**.
    b. **Policy Initiatives**: Development of a position paper which is research- based, aimed at changing a specific policy or policies. This must be aimed at a group of policy makers to effectively promote change.
5. **Other Options**: Any other project of interest to students that is related to significant clinical, theoretical, management or policy topics. All projects should demonstrate a research emphasis.

Any project that involves human subjects' research needs to be approved by the institutional review board (IRB) before data collection begins. See the IRB website for guidance on the process.

Procedure for Project Completion

First the project advisement team is approved by the Graduate Studies Committee at least 4 months before the project defense. The adviser is a faculty member with the primary

responsibility of overseeing the ongoing work of the project. The reader is not necessarily involved in continuous advisement but brings expertise. His/her role may vary in the amount of involvement.
Once initial approval is sought, the student submits a one page prospectus outlining the proposed project and gets approval of the advisement team from the Graduate Studies Committee. The student meets regularly with the adviser during the project work. A final meeting is then scheduled with the advisement team to ensure successful completion of the project. Criteria for evaluation of projects in administration, adult care, and education are attached in appendix B. Projects are graded as Pass/Fail. Grading criteria for projects are shown in Appendix C.

- First registration (3 credit course) to be billed for 3 credits.
- Second registration (zero credits) to be billed for 0 credits.
- Registrations beyond the second time should be the exception for projects and, thus, will require Faculty Graduate Committee approval and students will register for the project (zero credits) and be billed for 1 credit.

Thesis

Thesis Proposal
Students prepare a proposal outlining the research plan. This proposal needs to be approved by the student's thesis chair and other review committees before proceeding to the data collecting stage. The thesis proposal plan needs to be approved by the Graduate Studies Committee at least 4 months prior to the thesis defense.

Thesis Committee
The Master's thesis committee should be composed of at least three members approved by the chairperson of the program. The thesis topic and Committee membership must be approved at least 4 months prior to the thesis defense date. It is advisable that the thesis committee includes one member from outside the Hariri School of Nursing, who may be from an institution outside AUB. All committee members should hold professorial rank. The thesis committee approves the thesis topic and research program and conducts the thesis defense.

Thesis Defense
The thesis defense is open to the public and must be carried out no later than the dates specified in the table below depending on the graduation semester.
'Pass' or 'fail' is reported for the thesis and defense. In case of failure, the students may resubmit the thesis and defend it after a period of at least three months. Failure the second time leads to discontinuation from graduate work.
Students must be registered for the thesis or at least one course in the semester or session during which they expect to graduate in order to present their defense.

For Master's Candidates Graduation in:	Summer 2017-18	Fall 2018-19	Spring 2018-19
Deadline for approval of thesis topic and committee[3]	May 7, 2018	September 21, 2018	December 14, 2018
Deadline for thesis defense[3]	September 7, 2018	January 28, 2019	April 25, 2019
Deadline for thesis deposit at library[3]	September 17, 2018	February 7, 2019	May 6, 2019

Deposit of Thesis in the Library
After passing the thesis defense examination, the student is required to deposit two hard copies and one CD copy of the thesis at Jafet Memorial Library. A library receipt of these copies must be delivered to the Office of the Registrar before the student is awarded the degree. The student should sign a release form indicating whether or not the library is authorized to supply copies of the thesis to other libraries or to individuals. The non-authorization option is valid for a period of two years only, after which copies of the thesis will be supplied on request.

Residence Requirements

To meet the minimum residence requirements for the master's degree, a student should register and be in residence as a graduate student for at least two semesters and two summers, or four summers.

Research

The faculty of the Hariri School of Nursing believes that research is a major component of the MSN program and is basic to the development of a scientific knowledge base for practice. Information on faculty research is available on the web and is updated on a regular basis with new faculty. Appendix D lists the graduate faculty research profiles.

The faculty of the Hariri School of Nursing at AUB believes that:

- Nursing research contributes to the advancement of knowledge development in general and to the body of nursing knowledge in particular.
- Nursing research is basic to effective nursing practice.
- Programs of research generate more in–depth knowledge in a focused area of research.
- A thesis could be generated from established programs of research. This improves the depth and quality of studies. It provides the student with unique opportunity of working with a circumscribed area of research under the mentorship of an expert faculty member.
- Possibilities also are made available for students to generate their own thesis topics under the supervision of available expertise. This encourages originality and applicability of research. Students are encouraged to choose topics of interest in close consultation with their adviser.

Publication rights based on thesis/project work

- Students publishing Thesis/Project Work, which is within established programs of research at the Hariri School of Nursing should do that in close consultation with their mentors. Agreement on authorship needs to be established in advance.
- It is customary that students writing articles based on original thesis work should be designated as first authors and faculty members mentoring their work as second and consecutive authors unless previously agreed otherwise.

AUB Policy on Graduate Assistantships

Assistantships covering tuition and partial living expenses are available for students at the graduate level in return for a specified number of hours of work per week (maximum of 20 hrs /week) for the Hariri School of Nursing. Assistantships are awarded on the basis of the academic record and departmental needs. Applications for new students are provided within the admissions application package. Refer to AUB's website http://www.aub.edu.lb. Continuing students may obtain applications from the Office of the Dean of the School. Applications should be submitted early in the semester preceding the semester for which one is applying. For more information about Graduate Assistantship, consult the Dean's Office and the Students Services Officer Mrs Lynn Berbary Najem, 4th floor, Hariri School of Nursing Building.

General Policies and Information

Non-Discrimination Policy

AUB encourages a diverse student body and workforce, and is committed to the principle of equal opportunity in education and employment. In the administration of its educational, admissions, and employment policies, and other university programs and activities, AUB does not discriminate on the basis of race, color, religion, age, national or ethnic identity, gender or gender identity, marital status, disability, genetic predisposition or carrier status, alienage or citizenship status, political affiliation, or any legally protected characteristic, except as required by Lebanese law. In addition, in compliance with Title IX of the US Education Amendments of 1972, which prohibits sex discrimination in education and interprets sex discrimination as including sexual harassment and sexual violence, the University maintains a Title IX coordinator in the Office of the Provost and may appoint deputy Title IX coordinators as needed. Inquiries and complaints regarding sex discrimination, sexual harassment, and sexual violence may be directed to the Title IX coordinator, College Hall, 5th Floor, Beirut, Lebanon, or by email at integrityofficer@aub.edu.lb. The Office of the Provost maintains a resource page on Non-Discrimination, Harassment, and Title IX at www.aub.edu.lb/titleix. AUB will provide reasonable accommodation consistent with the law to members of the AUB community with a disability. What constitutes a reasonable accommodation depends on the circumstances and, thus, will be addressed by AUB on a case-by-case basis.

Academic and Professional Integrity

Academic integrity and honesty are central components of student's education. Ethical conduct maintained in an academic context will be taken eventually into a student's professional career.

Academic honesty is essential to a community of scholars searching for and learning to seek the truth. Anything less than total commitment to honesty undermines the efforts of the entire academic community. Both students and the faculty are responsible for insuring the academic integrity of the University.
Academic dishonesty, including but not limited to cheating and plagiarism, is deplored and not to be tolerated. Any act for cheating may be ground for probation, suspension and/or expulsion. Any act for plagiarism may be grounds for a failing grade on the paper and in the course. In addition, other sanctions may be imposed by the school for acts of academic dishonesty.

Students are expected to have high standards of integrity in both the clinical and academic settings. Integrity is a reflection of the respect that one holds for oneself and others. It is reflected by students' behavior in class and in the clinical practicum.
In the clinical settings, students are expected to protect patients' confidentiality, and to be honest in any documentation regarding the patient's condition and their own assessment and interventions. Students are expected to maintain high professional standards, including being physically, intellectually, emotionally and academically prepared when caring for patients.

Student Code of Conduct (http://pnp.aub.edu.lb/general/conductcode/index.html)

The purpose of this code is to provide students with a clear statement of the standards of behavior expected in an educational environment, so that they make responsible choices regarding their participation in the academic community and understand the consequences of their infringement of these standards. Violations may be of an academic or non-academic nature.
Jurisdiction of academic violations lies initially under the authority of the dean of the faculty or school to which the student belongs. Misconduct that is clearly non-academic falls under the jurisdiction of the dean of student affairs who will take the necessary action in consultation with the dean(s) of the faculty or school to which the student belongs.
The following are examples of actions deemed in violation of the Student Code of Conduct; they are not intended to define misconduct in exhaustive or exclusive terms. Any student who violates the principles described in the preamble to this document shall be subject to disciplinary action in accordance with the Student Code of Conduct.

Definitions of Misconduct

A. Academic Misconduct

Offences involving academic misconduct include, but are not limited to, the following:

1. **Cheating**[1]
   While taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work.
   Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

2. **Plagiarism**[2]

[1] **Adapted from the Villanova Academic Integrity Code.**
[2] **Adapted from the Modern Language Association Style Manual and Guide to Scholarly Publishing, as found on Duke University's web page.**

Whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.

3. **In-Class Disruption**
   Students in class are expected to behave appropriately, and shall not disrupt classes or exams by extraneous conversation and/or misbehaving.

4. **Dishonesty**[3]
   Students are expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

   a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
   b. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
   c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.
   d. Stealing or damaging library books.
   e. Unlawfully copying computer software.
   f. Engaging in bribery of any kind.

B. Non-Academic Misconduct

1. Disruption/Obstruction
Students have the right to express their opinions on matters of concern to the University in an organized manner and in a public space, excluding residences on campus, but they must notify and consult with the dean of student affairs before doing so. The nature of the event and any publicity accompanying it must be reviewed by the dean to assure that neither Lebanese law, nor university policies and norms are being violated.

In cases where student-sponsored events, including protests, sit-ins, and demonstrations are, after such consultation, not approved by the dean of student affairs, or, if needed by the Board of Deans or the president, it may become necessary for the dean of student affairs to undertake disciplinary measures and even to instruct campus protection to bring the public gathering to an end.

Disrupting or obstructing the normal educational process or any university function or activity by student demonstrations, sit-ins, or 'strikes' is strictly prohibited. This includes, but is not limited to: disrupting classes, library operations, seminars, exhibitions, meetings, ceremonial events, or examinations; impeding or preventing others from attending such events; falsely activating a disaster alarm; or making a threat.

Under no circumstances are any members of the university family to be intimidated or threatened in the execution of their normal duties and responsibilities. That means that students and faculty who wish to hold or attend classes or to go to their offices or places of

[3] **Adapted from the Villanova University Academic Integrity Code.**

study shall not be prevented from doing so; non-academic staff and administrators shall not be impeded from going to their places of work.

2. Distribution of Unauthorized Published Material

The public distribution and posting of published materials such as fliers, leaflets, posters, audiovisuals, etc., must be approved and stamped by the dean of student affairs. The campus protection office will remove from display any such unauthorized material.

3. Theft

Stealing on campus or at a university-authorized event off campus, including unauthorized use of university equipment or services (e.g., telephones, photocopiers, or computer facilities), or possession of stolen property, is prohibited.

4. Destruction of Property/Endangering Public Safety

Students are expected to protect university property and to respect the safety of others. Acts contrary to these principles, which include, but are not restricted to, the following, are subject to disciplinary procedure:

a. Engaging in vandalism or other intentional damage (such as spray painting or graffiti) to property on campus or at university-authorized events off campus.

b. Littering, such as disposing of waste (empty bottles, cigarette butts, food containers, etc.) in other than designated places on campus.

c. Unjustified discharge, damaging, or tampering with any fire extinguisher, fire alarm, or other safety devices.

d. Taking, or attempting to take, action that damages or could damage private property, without the consent of the owner or person legally responsible.

e. Appropriating, or attempting to appropriate or possess, private property, without the consent of the owner or person legally responsible.

f. Unauthorized entry, unapproved duplication of keys or use of such, or unauthorized use of campus facilities.

5. Mental or Physical Harm

Acts that inflict mental or physical harm are prohibited, including the following:

a. Engaging in physical aggression including, but not limited to, assault.

b. Engaging, or attempting to engage, in intimidation, coercion, extortion, blackmail, or bribery; bullying; threatening violence, injury, or harm to others on campus or at university-authorized events off campus; endangering or tending to endanger the safety, health, or life of any person.

c. Engaging in behavior that creates a substantial risk of, or results in, injury to others, such as committing arson or causing a riot.

d. Using force, inciting violence, inflicting or attempting to inflict injury to others on campus or at a university-authorized event off campus.

e. Engaging in any activity that endangers the health and safety of an individual or demeans an individual in conduct of an unbecoming or humiliating nature, or in any way that detracts from an individual's academic pursuits.

6. Possession of Dangerous Weapons or Materials

Students must not distribute, possess, store, or use, on campus or at a university-authorized event off campus, any kind of weapon, device, explosive, dangerous chemicals, hazardous materials, or any other instrument designed to do bodily harm or to threaten bodily harm. Instruments used to simulate such weapons, which endanger or tend to endanger any person, shall be considered weapons.

Students are also prohibited from distributing, possessing, storing, transferring, selling or attempting to sell, delivering, using or attempting to use, any illegal drugs, narcotic or hallucinogenic, on campus or at any university-authorized event off campus.

7. Discrimination and Harassment

Students are not allowed to discriminate on the basis of race, gender, age, religion, national origin, ethnic origin, marital status, mental or physical disability. Nor shall they harass, intimidate, insult, or threaten others whether verbally, in writing, or through electronic means.

Engaging in sexual harassment, e.g., requests for sexual favors, unwelcome sexual advances, unwelcome physical contact of a sexual nature, spoken comments or abuse (including email) of a sexual nature, and the public display of sexually suggestive objects or pictures is prohibited (refer to the University Policy Against Discrimination and Harassment).

8. Smoking and Alcohol

The consumption of alcohol, on campus, by students is not permitted. Smoking is not permitted in university buildings other than private residences and those areas within the student dormitories, as may be designated from time to time by the dean of student affairs (refer to the University Policy on Smoking). Students must abide by the following:

- Smoking is not permitted in any University building, including the Medical Center, except for private residences and student dormitory rooms, as may be designated by the Dean of Student Affairs. Smoking is prohibited in all dormitory common rooms, corridors, lavatories, and other public spaces. Smoking is prohibited in all university vehicles.
- Persons smoking in outside open areas, or in private residences, or in designated dormitory rooms where smoking is permitted, are required to ensure that smoking materials are disposed of in a tidy and safe manner. On no account are cigarette butts to be disposed of on the ground or thrown into the wooded or landscaped areas.
- All persons on AUB property are expected to respect this Smoking Policy. Breaches of the Policy should be reported to the Environmental Health and Safety Center, extension 2360. Persons who are found to have breached the Policy will be subject to disciplinary actions.

9. Inappropriate Sexual Behavior

Publicly engaging in sexual behavior is prohibited as deemed by Lebanese law.

10. Use of Computers

Accessing protected computer accounts or other computer functions, knowingly transmitting computer viruses, and unethical use of AUB access is prohibited (refer to the University Policy on the Use of Computers).

Jurisdiction over Violations

AUB holds all students responsible for actions occurring on campus and at the AUB Farm, the AUB medical center, and university-authorized events.

Students attending an off-campus function as representatives of the University (such as, but not limited to, students serving on academic or athletic teams or engaging in club activities) are subject to disciplinary sanctions for violations of this code.

Disciplinary Actions

Disciplinary action will be imposed according to the nature (academic or non-academic) and severity level of the violation.

A. Academic Misconduct

In principle, enforcement of disciplinary actions for academic violations is carried out by those immediately responsible.

It is the responsibility of the faculty to uphold university policies. Thus, the immediate responsibility for dealing with instances of cheating, plagiarism, and other academic violations rests with the faculty member. If a faculty member has good reason to believe that a student has violated academic standards, it is his or her responsibility to discipline the student expeditiously.

A faculty member who has good reason to believe that a student has violated academic standards must give a grade of zero on the exam or assignment where the violation occurred.

When the instructor has taken disciplinary action, he or she should send a letter to the Student Affairs Committee in the faculty or school in which the student is enrolled, informing that committee of the incident and the action taken. A copy of the letter will be placed in the student's file, as well as forwarded to the student's adviser for follow-up.

B. Non-Academic Misconduct

Violations of a non-academic nature are the responsibility of the dean of student affairs, in consultation with the dean of the faculty or school in which the student is enrolled and, as necessary, the chief of campus protection. Students should know that the laws of the Republic of Lebanon apply on campus, and those who violate these laws may be subject to criminal prosecution.

C. List of Primary Disciplinary Actions

Documentation of disciplinary actions, other than suspension and expulsion, will not become part of the student's permanent record. Records of the University Disciplinary Committee decisions, including charges and sanctions, will be maintained as part of the confidential records in the office of the respective dean, for a period of up to four years after the student graduates or ceases to be a student.

Range of Actions:
Informal Warning

This may be oral or written. It is a statement that the student has inadvertently violated a university regulation. The warning will be recorded in the respective dean's records and the student will be documented.

Examples: *Littering and smoking in prohibited areas.*

Reprimand

This will be in writing. It is a statement that the student has violated a university regulation. It is intended to communicate most strongly, both the disapproval and the reprimand of the university community. The reprimand will be kept in the respective dean's records.

Examples: *Inadvertent plagiarism - failure to cite sources appropriately, and inappropriate physical contact.*

Dean's Warning

This will be in writing. Only two Dean's Warnings are allowed in a student's academic career at AUB. It is recommended that any violation of university regulations after the second Dean's Warning results in consideration of suspension. Such a warning is kept in the file of the student and the respective dean's records.

Examples: *Plagiarism, academic dishonesty, disruption-obstruction, mental or physical harm, discrimination and harassment.*

Suspension

This will be in writing and will form part of the student's permanent record. A student will be suspended for a fixed period of time during which the student may not participate in any academic or other activities at the University. At the end of the suspension period, the student may be readmitted to the University, only upon the recommendation of the University Disciplinary Committee.

Examples: *Cheating, theft, and destruction of property.*

Expulsion

This will be in writing and will form part of the student's permanent record. Expulsion denies the student the right to participate in any academic or other activities of the University for an indefinite time. Only under the most unusual circumstances, and upon the recommendation of the University Disciplinary Committee, will an expelled student be readmitted to the University.

Examples: *Academic dishonesty, possession of dangerous weapons or materials, and endangering public safety.*

N.B. Any person who maliciously lies to cover up an act sanctioned by the code of conduct will be considered to be an accessory after the fact and may be subject to disciplinary action.

D. Required Withdrawal from Campus Pending Hearing

In extraordinary circumstances, when the student's continued presence is deemed a danger to the university community, the student will be required to withdraw from the campus, pending a meeting of the University Disciplinary Committee. This action shall normally require the approval of the president of the University.

E. Secondary Disciplinary Actions

In addition to the disciplinary actions listed above, the following secondary disciplinary actions may be imposed upon those who violate the Student Code of Conduct. Secondary disciplinary actions may be of an academic or non-academic nature.

Secondary Disciplinary Actions – Academic

- The student may be prohibited from participating in the work study program.

- The student may be prohibited from receiving any form of financial aid, scholarship, or monetary award.
- The student may be prohibited from receiving any form of honor, merit award, or other academic recognition award.
- The student may be prohibited from holding a graduate assistantship.
- The student may be given a failing grade in a course or a test or any other form of academic assessment.

Secondary Disciplinary Actions – Non-Academic

- The student may be prohibited from representing AUB in any official role, activity, or event.

- The student may be prohibited from serving as an officer of any AUB organization including club, team, or society.
- The student may be prohibited from living in any AUB hall of residence or similar facility.
- The student may be strongly advised to attend treatment or counseling as determined by the director of the counseling center, in consultation with the dean of student affairs.
- The student may be required to make financial restitution.
- The student's case may be referred to an external agency for further action (this could include the filing of criminal charges).

Complaint Procedure

Any person subject to, or who witnesses, a violation of the Student Code of Conduct should forward a written complaint to a faculty member, a chairperson, or any university official. Academic violations shall be forwarded to the dean of the faculty to which the student accused of the violation belongs. Non-academic violations shall be referred to the dean of student affairs. Violations that may require suspension or expulsion will be referred by the concerned dean to the University Disciplinary Committee.

Formal Hearing by the University Disciplinary Committee

The University Disciplinary Committee will deal with alleged violations in a manner that ensures that those charged with a violation understand the charge and the evidence against them and are afforded a reasonable right of rebuttal.
The University Disciplinary Committee shall inform the student of the charge in writing.
Evidence shall be presented in the presence of the student who shall have a reasonable right of rebuttal including the right to cross-examine witnesses. In determining penalties, the committee may take into consideration the student's cumulative discipline record.

Appeal Procedure
Any student who is charged with a disciplinary offense has the right to a full and fair hearing for any disciplinary charges brought against him or her under university regulations.
If any of the following apply, a student may appeal to the dean of the faculty or school regarding faculty or departmental decisions, or to the University Disciplinary Committee against disciplinary action taken by the dean of student affairs or the dean of the faculty or school to which the student belongs:

1. Procedural error
2. New evidence
3. Unsupported conclusion
4. Disproportionate sanctions

The outcome of this appeal may result in higher, lower, identical, or no sanctions at all being imposed. The University Disciplinary Committee's decision shall be final.

Other Policies

Student Representation on Faculty Committees
Student representation on the Hariri School of Nursing Committee is encouraged.
Students can request that items be put on any Hariri School of Nursing Committee agenda regarding graduate students. At the discretion of the Graduate Program convener or the Deanof the Hariri School of Nursing, this request may be granted.

Facility and Supervision Guidelines for Graduate Student Practice
The Faculty and students will discuss qualifications for clinical facilities and preceptors. Any student may seek new learning experiences in facilities that are not currently used by the Hariri School of Nursing. In order to accomplish the negotiations that are normally done when a graduate student requests placement at a new clinical facility, placement is expected to begin (at least 8 weeks ahead of lead time is preferred). Student selection of clinical facilities and /or preceptors is under the supervision of the Graduate Faculty.

Students with Disabilities
Students with disabilities applying to AUB are strongly encouraged to make their disability known to the Admission Office. This information will not affect the decision on admission; rather, it will give the University the opportunity to offer specific assistance and support through programs and services provided by different departments on campus. Therefore any student who had a disability that might prevent him/her from fully demonstrating his/her abilities should meet with an adviser as soon as possible to initiate disability verification and discuss accommodations that may be necessary to ensure full participation in the successful completion of requirements for graduation.
As old buildings are renovated and new ones built, wheelchair access ramps are being constructed. Some parking lots have been assigned and dedicated for special persons and they are located on different AUB sites. These areas are labeled for "Special Permit" holders. A room for the Visually Impaired is located in the West Hall.

Students Rights and Responsibilities

Students are members of the academic community and are also citizens. Students enjoy the same freedom of speech, peaceful assembly and right to petition. Students have the responsibility to know and obey the Lebanese Laws & that of the University. It is the responsibility of the student to know institutional regulations, policies and established guidelines as stated in this handbook. Students are accountable for their own behavior at all times. Students have the right to freedom from discrimination on the basis of race, color, religion, sex, and age. Students have the right to be informed, in writing, of the expected behaviors and standards by which they will be evaluated prior to participating in clinical classrooms activities. Students have the right to academic evaluations which are not prejudiced and which are based on stated course requirements. As constituents of the academic community, students are free,

individually or collectively, to voice constructive criticism through identified channels on issues such as curriculum, and matters of general interest to the student body without fear of reprisal.

While under the direct supervision of an instructor, students also have the right to adequate safety precautions provided by the Hariri School of Nursing. Students also have the right to negotiate participation in clinical situations which they feel are threatening to their personal health or life. Students, individually or collectively, have the right to expect, within a reasonable length of time, feedback concerning all student related issues presented to the faculty.

Freedom in Classroom
Students are responsible for learning the content of the courses in which they enroll, though they should be free to take reasoned exception to the data or views offered in any course of study, and reserve judgment about matters of opinion.
Students are responsible for complying with standards of academic performance required by each course in which they are enrolled. Such standards shall be communicated clearly in writing on or before the first meeting of each course. Students should have protection against prejudiced, arbitrary, and capricious academic evaluation.
Knowledge of student's views, beliefs and political associations acquired by the faculty members in the course of their work as instructors, advisers, and counselors are to be considered confidential.

Freedom of Inquiry and Expression
Students are free to examine and discuss questions and issues of interest to them, to express their opinions whether in public or in private. Such freedom does not, however, permit student groups to disrupt the orderly processes of the educational environment, nor does it permit the expression of ideas in ways which violate civil or criminal law, blatantly disregard the truth, threaten, demean, or libel others. In expressing their views, students should make clear that such views are not necessarily those of the University.

Getting in Touch with the Right People at the Rafic Hariri School of Nursing

Students are encouraged to communicate any concerns they might have to the appropriate persons. They can refer to the Student Services Officer for the following issues:

- Answering queries about the MSN program
- Student orientation and advising
- Follow up on graduate assistantships and scholarships available to nursing students
- Problems in registration (opening capacity, removing restrictions, resolving time conflict problems, removing holds, selection of elective courses, drop and add courses)
- Dealing with the administrative body (Registrar's office, Office of Financial Aid, Office of Student Affairs and specific committees at HSON)
- Writing and submitting petition letters (underload/overload credits, late registration, medical reports, course withdrawal, reactivation and readmission etc.)
- Selection of specific academic forms for internal and external procedures
- Program evaluation and satisfaction surveys
- Career guidance and work opportunities
- Student related activities such as student elections, NSS activities and graduation parties etc.
- Requesting credentials after graduation.

The Student services office seeks to assist and guide nursing students to develop their plan to academic success, by referring them to the appropriate resources and procedures, and ensuring that they are complying with AUB academic rules and regulations.

Issues related to a particular course are best discussed with the course coordinator. Problems with a student's academic progress should be followed up with the assigned academic adviser. Students may discuss issues related to a particular class with their advisers. If the student cannot resolve problems with the course coordinator or adviser, he/she should talk to the track coordinator, and then the MSN convener. If necessary, issues are referred to the Dean of the School.

University Services

University Libraries

The AUB library system consists of two main libraries: the University Libraries and Saab Memorial Medical Library.
The University Libraries include the Jafet memorial Library as the Central Library, with two branch libraries: the Engineering and Architecture Library, and the Science and Agriculture Library with its annex AREC (Farm) Library.

The University Libraries have over 558,932 volumes, with 2,708 subscriptions to periodicals, of which about 238 are in Arabic. There are also nearly 1,051,794 audiovisuals items of all kinds. The Archives and Special Collection include 435 linear feet of archives, 1,392 manuscripts, 11,139 volumes of theses projects and dissertation, 24,477 photographs, 3, 870 posters and 1,462 maps. The University Libraries are currently open 90 hours per week. All Libraries have photocopying machines available for student use. A card containing 100 photocopying units may be bought for LL5, 000 in vending machines located in each Library. Photocopying is also offered at the University Book store for a small fee.

The Saab Memorial Medical Library (SML) is dedicated to the Memory of Dr. Nicholas Saab (AUB School of Medicine graduate 1959) through a generous gift from his parents.
SML has been functioning in its present quarters as part of the Medical Center since 1975, and qualifies as one of the best medical libraries in the Middles East. The collection consists of 1,200 printed periodical subscriptions , over 82,320 backfile periodical volumes, nearly 42,000 books , over 2,000 of which are of historical value such as (Avicenna's "Cannon of Medicine," 1593, which has been digitized and published on the Web under http://ddc.aub.edu.lb/projects/saab/avicenna/index.html, and nearly 2300 audio-visual items, including computer software. SML now acts as a hybrid library that is constantly increasing its e-resources while maintaining its traditional services. It has a large number of the most important bibliographic medical and allied health data bases, and more than 2,500 e- journals. SML has been automated since 1990 and is accessible through the internet at http://www.aub.edu.lb/libraries/medical. In 1978, SML was designated by WHO as the National Focal Point of Lebanon. The Library has a special collection called the Lebanese Corner, http://192.168.100.187/, which includes publications about Lebanon or by Lebanese authors in the fields of medicine and other health related topics. SML services are provided mainly to AUB clientele, but also to all other medical and allied health users throughout Lebanon. With its rich, up-to-date medical collection, SML aims to promote research in the medical and allied health fields. SML is open 80 hours a week. Databases are currently accessible via library or home search via AUBs' website.

Office of Information Technology

The office of information technology (OIT) manages AUB and AUB Medical center's central information technology. The OIT manages the Student Information System (AUBsis) operated by the Registrar's; the Library Information System, Financial Information System; the Learning Management System (Moodle); and the integrated hospital information system operated by the hospital administration and departments. You can view the services provided by the IT organization by visiting: www.aub.edu.lb/it/.

Before using any of the services below, you must activate that specific computer accounts first.

AUBnet account: The AUB net account provides e-mail, intranet, and Internet access in addition to other services such as roaming storage space, network printing, and personal web site space. Students must activate their AUB net account first as it is required to activate other accounts.

AUBsis account: The AUB sis account provides access to the AUB student Information System, a web-based application designed to provide the following on-line self services to students and faculty over the intranet and the Internet: On-line Registration, Drop and Add, Class Schedules, Grades, Student Transcripts, Address Information, and Billing Statements.

Student computer labs, located in Agriculture, Bliss, Business, Engineering (Wing B), Fisk, Physics, Van Dyck, Diana Tamari Sabbagh buildings, as well as all Libraries and dorms are used for instruction by the various departments and for personal use by the students. Many popular and PC software packages are available on the lab servers.

An Internet fee of LL60, 000 is charged every semester and will automatically be added to the statement of fees. The quota of Internet data per month per student is 100MB. This is a combined quota of web and e-mail data. Through the AUB Net Resources web site you can find out your Internet data usage for the month.

No limit exists on the time spent browsing and sending information on the web. The limit is only on the volume of data that is sent/ received in the process.

Access to AUB Computing Facilities

Access to computer hardware, software, intranet, and the Internet services is provided to members of the University for the primary purpose of enhancing the academic experience. Access to the use of AUB computer facilities is through authorized computer accounts. To be granted the use of a computer account, users must agree to abide by the AUBnet Code of Conduct for Users of Computing System and Internet Services.

A computer account consists of a unique log-in ID and a password. You identify yourself to the computer system when you log in. Your log-in ID tells the computer who you are. Like the PIN on your bank ATM card, your password is the key to your account. You must always keep your password secret.

To activate your AUB computing accounts go to http://website.aub.edu.lb/it/Pages/index.aspxthen click on account creation and management and follow instructions..

Available facilities:

- **Intranet and Internet Services**

IT provides a wired and wireless network infrastructure ensuring secure, reliable and widespread access for AUB users across the entire campus and hospital, including all dorms and faculty apartments. AUB students can connect to the AUB network from public computer labs or personal laptops and mobile devices via the campus-wide wireless network using any web browser. Students can access many web enhanced

courses and online material that they are registered in.
With an AUBnet account, all students, faculty and staff have full access to Internet, email, personal websites and other services such as network printers, intranet applications and the High Performance Computing (HPC) system.
AUB also offers the Eduroam service that allows students, faculty and staff to access the Internet from other universities around the globe, which are members of the Eduroam network, using their AUBnet account.

- **Computer Labs**

There are several computer labs on campus which provide access to the Internet and a variety of other resources (such as printers) and applications (such as SPSS).
Students may also request access to servers hosting applications such as Microsoft Office, special software for statistics and graphics, and various programming languages.

- **Microsoft Office**

All current students can download the Microsoft Office 365 suite of applications on up to 10 devices (5 laptops and 5 mobile devices) free of charge. For more details, visit www.aub.edu.lb/it/.

- **Mobile App**

AUB offers a mobile app that allows students to check course holds, grades, schedule, deadlines, academic calendar as well as program offerings. The mobile application also facilitates search for library books and articles as well as access to e-learning (Moodle), Instructor Course Evaluation (ICE) and the latest issue of MainGate.

- **IT Help Desk**

Friendly and knowledgeable IT help desk specialists are always ready to support students, faculty and staff. For IT-related support, contact the IT help desk by email at it.helpdesk@aub.edu.lb, dial ext. 2260, or visit one of the many IT support locations on campus in person anytime Monday-Friday 8:00am-5:00pm (7:30am-3:00pm during summer hours).
For more information, visit our website: www.aub.edu.lb/it.

Graduate Student E-mail Address

The University makes extensive use of electronic mail for communication and to keep in touch with students. To ensure that students receive timely communication and important announcements, the student's current email address must always be on file in the Hariri School of Nursing. Every graduate student is provided with an AUB Computer Account, which includes e-mail. It is strongly recommended that all graduate students use their AUB e-mail address as their primary one for the duration of the time they are studying here. This will help to prevent students missing announcements or other important communication from faculty and staff.

Bookstore

The University Bookstore is located at the back of Bliss Hall across from Penrose Hall. It stocks most of the required textbooks for specific courses, dictionaries, and other reference works, and a limited number of general publications. Assorted AUB items and gifts such as clocks, mugs, diploma, and picture frames, T-shirts, and binders are also on sale.

The Writing Center

For students who need assistance in writing papers or projects, the AUB writing center located in West Hall Room 307 provides assistance. Tutors from the Department of English are available Monday through Friday 9 am – 3 pm and consulting services are free. The extension to call for taking appointments is 3157.

University Health Services

Medical Records

An entrance medical record form will be sent to all admitted students who have made the commitment to enroll at AUB. It is to be completed by the student's family physician and mailed as soon as possible and before the period of registration in a pre-addressed envelope AUB provides. Alternatively the completed medical record form may be delivered by hand to the Office of Admissions.

All new students must have a tuberculin test at the time of the preliminary medical check, held during registration, and must report 48 hours later for the check on the test. Upon clearing the medical test, the student will be issued a clearance slip to proceed with registration. Students will not be registered unless they obtain this clearance slip. Students who report late for the medical check will be charged a late fee.

Medical checkups may be completed in advance of registration, provided that the student reports to the University Health Services on Campus and brings along a letter of acceptance and the entrance medical record.

Returning students are not required to complete any medical forms. Important changes in the student's medical condition and/or updating immunizations should be reported to a University Physician by appointment at the Health Services Center early in the first semester. Information will be kept confidential.

Health Insurance Plan (HIP)

The University Health Services (UHS) on campus provide medical care to members of the university community at large. Patients are seen Monday through Friday 8 am to noon and 1 to 4 pm in the Gulbenkian Infirmary located in the Sawwaf Building facing the Children Cancer Center in Lebanon. Appointments can be made at the reception desk in advance, either in person or by telephone between 8:30 and 4 pm. A physician is also available to receive patients on a walk-in basis. Such patients must have problems of an urgent nature; otherwise, they will be given return appointments for a later time. In case of emergency, the patient should report directly to the Emergency Unit at the Medical Center or to the nearest Emergency service or Physician.

Students may elect to enroll in the University's Health Insurance Plan (HIP, provided they register for at least six credit hours. Auditors are not considered students. A graduate student registered for a thesis is eligible to continue the HIP coverage for two consecutive years only.

Regular students enrolling For twelve months beginning with October registration , pay 514,000 L.L. .

For one semester and summer session beginning with February registration , pay 386.000 L.L.

Students enrolled in the Spring Semester are covered through the summer until September 30, provided they do not leave the University or drop all their courses. A married student will have

the option of including spouse and children at additional fees as outlined in the regulations for the Health Insurance Plan. A student may be exempt from enrolling in the HIP if he/she presents proof of coverage by another health insurance plan.
HIP covers expenses incurred at AUB Medical Center exclusively. Medical bills from other institutions are not covered.
NSSF fee per student per year is 202.500 L.L.

National Social Security Fund (NSSF) Medical Branch

Membership in the NSSF is mandatory by Law for all Lebanese students excluding freshman and special students, and students who are older than 30 years. Non-Lebanese students may not join. To facilitate enrollment in the NSSF Medical Branch, students are required to bring the following items when registering:

- A social security application form filled correctly. Copies of this form will be available for distribution at the time of registration to students who have not completed it.
- A photocopy of their Lebanese Identity Card.
- Their NSSF number if already registered.
- The NSSF number of either parent if insured with the NSSF through father or mother.
- Family record is required of married students only.

Extra-Curricular Services

Nursing Student Society

The Nursing Student Society (NSS) brings together nursing students from all levels to engage in various professional and social activities, under the guidance of an assigned faculty advisor. Objectives of the NSS are to:

- Serve as an organization through which matters related to the welfare of students and the school is transacted.
- Provide a channel for coordination of activities between the students and faculty members, and with other student organizations.
- Organize activities that promote a spirit of loyalty and fellowship among the student body.
- Provide means for active participation in activities that foster the personal, professional and civic development of students.

The NSS has three standing committees:

1. The Educational Committee organizes educational programs of interest to the community.
2. The Social Committee is responsible for social and recreational activities.
3. The Publicity and Finance Committee is responsible for publicity and financial matters.

Clubs and Societies

Opportunities for students to participate in extra-curricular activities, generally organized under the auspices of student-governed societies or clubs are numerous. Membership is open to all registered students upon completion of an application and payment of a nominal fee. For further

information or to obtain a list of active Clubs and Societies, go to the Department of Student Activities in the West Hall, extension 3182, or AUB Catalogue.

Athletics and Recreation
The University offers a wide range of sports, athletic and recreational programs through its Athletics Department. Facilities include AUB's Green Field, which hosts international, national, and varsity sports tournament. The Green Field includes the University's soccer field, light outdoor basketball courts, lighted outdoor volleyball courts and a lighted 450-meter track, in addition to the Charles W. Hostler center.

Student Housing
AUB is a residential University in the American liberal arts tradition. It was the first and still is one of the few residential universities in the Middle East offering a beautiful Campus where a rich extra-curricular and community life flourishes. Life in the AUB residence system offers a high degree of reliability. Dorm life in AUB establishes strong, supportive communities. For extra details, check AUB catalog.

Student Transportation
AUB allows limited automobile access to campus. Only students suffering from illness or disabilities may bring cars on campus. Authorization from Infirmary must be received before a permit can be issued, and then the student can contact Business Services at extension 3510 for a special permit.

Passports and Visas
Foreign students joining AUB must have passports valid for a period of not less than 13 months from the date of joining the University. They should also secure an entry visa to Lebanon from the nearest Lebanese Embassy or Consulate in their country. The Office of Students Affairs, in coordination with Personnel, the Office of Admissions, and the Office of Registrar, will help provide the necessary certificates for registered foreign students to acquire residence permits from the Lebanese authorities.

Mail Service
The University Post Office, located in the basement of Ada Dodge Hall, handles local campus mail and mail for the Lebanese postal services. To secure a campus mailbox a student must show a receipt of fee payment at the AUB Post Office.
Urgent mail may be sent by Aramex through the AUB Post Office. A special rate is offered to the AUB community. Also DHL offers special rates at the AUB Bookstore.

Food Service
The University operates a modern, cafeteria-style food service on the Campus in Ada Dodge Hall. Students have the option of using these food service facilities or eating elsewhere. In addition to the main cafeteria the University also maintains the Mary Dodge Hall Cafeteria, the Engineering Cafeteria, and the Agriculture Kiosk. These facilities provide a variety of hot and cold refreshments for students and their guests. Vending machines are available in a number of University buildings and at the beach tunnel. You can also ty the Coffee Shop on the first floor of AUBMC, the hospital cafeteria or Lavazza café on the hospital's second floor.

APPENDIX B

GUIDELINES FOR THE MSN COMPREHENSIVE EXAM

A. To complete requirements for the Master of Science in Nursing, students must pass a comprehensive examination. To be eligible to take the examination, the student should have:
    a. Completed all core courses and most specialty courses.
    b. Be in good graduate standing.
    c. Met with his/her adviser to determine eligibility.

B. The comprehensive examination process:

    a. The examination will be taken after most of the course work is finished. Students are advised to take the comprehensive examination as early as possible, before beginning their thesis or project.

    b. There will be three examination questions which will be based on content from the MSN core courses (Foundations of Advanced Practice; Nursing Research); and the Area of Specialty.

    c. Two faculty members will read and grade each question blindly.

    d. A final grade of Pass is required to pass the exam. The grade of Pass will be given if the student passes all three questions.

    e. Criteria for grading will be based on knowledge of content, as well as evidence of critical and analytical thinking. The desired learning outcome is the synthesis and application of knowledge of advanced nursing practice.

    f. Students who receive PR (i.e. Unsatisfactory) on the examination may take it a second time after a period of at least three months.

APPENDIX D

Faculty List

Research and Publications

Faculty List

Huda Abu-Saad Huijer RN, PhD, FEANS, FAAN
Professor of Nursing Science & Dean Hariri School of Nursing
Extension 5952/3
E-mail: Huda.Huijer@aub.edu.lb

Research Focus & Areas of Interest:

- Research expertise: pain management and palliative care across the life span.
- Research Interest: effectiveness of expanded role of the nurse.

Ongoing Research

Principal Investigator: Huda Abu-Saad Huijer
Palliative Care in Older Adults in Lebanon
The purpose of this study is to evaluate the quality of palliative care (PC), the quality of life (QoL), symptom management, and functional ability among hospitalized older adults in need of palliative care in Lebanon.
The study will follow the observational survey design. Data will be collected from three hospitals: AUBMC, St. George, and Ain Wazein. Face to face interviews will be carried out using the Quality of Palliative Care Questionnaire-Adult (QPCQ-A) assembled using several instruments measuring quality of life, symptom prevalence and management, quality of care, and functional ability.
Coinvestigators: **Marina Adra, Hala Darwish, Souha Fares**, Hussam Ghusn, Ramzi Hajjar, George Karam, **Samar Noureddine**
Funding: CNRS
Status: Data Collection

Principal Investigator: Huda Abu-Saad Huijer
Chronic Pain: The Development and Psychometric Validation of an Arabic-Language Version of the Pain Catastrophizing Scale (PCS-A)
Chronic pain is believed to be a disease on its own and has been increasing in prevalence. While reporting or anticipating pain, patients experience a negative "mental set" of catastrophizing that has been described as an exaggerated cognitive-affective response to actual or anticipated pain. The 13-item Pain Catastrophizing Scale (PCS) is the most widely used measure of pain-specific catastrophizing and assesses three dimensions: rumination, magnification, and helplessness. The PCS has been translated and validated in several languages though no Arabic version exists that measures an important predictor of pain and pain-related outcomes. Thus, the purpose of the project is to develop and psychometrically evaluate PCS in the Arabic language among a sample of 150 adults in Lebanon.

Research Focus and Areas of Interest

My research focus is action research, i.e. community- based (interventional) studies that address current and salient problems and issues in the community. My research interests and publications have evolved from working with women and adolescents to including patients with chronic conditions, such as diabetes and CAD. The common thread which links my research projects is the emphasis on health education and prevention. If one examines my research involvement, it would appear to be multi-faceted.

Hala Darwish, RN, PhD
Associate Professor
Managing Director Abou Haidar Neuroscience Institute and the
Nehme and Therese Tohme Multiple Sclerosis Center.
Acute Care and Neuroscience Nursing
Room 514
Extension: 5938/7427
E-mail: hd30@aub.edu.lb

Dr. Hala Darwish is an associate professor at American University of Beirut, Hariri School of Nursing; her research area focuses on cognitive rehabilitation; biological and environmental factors that modulate the cognitive function in adults. She has examined the biological and learning and memory changes that follow traumatic brain injury, and factors associated with enhancement and impairment of cognitive performance in ageing, and multiple sclerosis. She has experience in basic science and clinical research methods. She explored the effect of vitamin D deficiency and supplementation on cognitive function in older adults and in multiple sclerosis and identified norms of widely used cognitive assessment measures for the Lebanese population. She is currently examining the effects of environmental enrichment and exercise on learning and memory post severe traumatic brain injury in an animal model of TBI and the effects of virtual reality nature on cognitive fatigue in multiple sclerosis patients. She has presented scientific papers in national, regional & international conferences. She was the recipient of NIH training grants and the international organization of the MS nurses research award.

Research: Traumatic Brain Injury, Multiple Sclerosis, Dementia and Ageing

Research Focus: Cognitive Rehabilitation and performance: learning and memory

Ongoing Research

Principal Investigator: Hala Darwish
Interacting with Nature using virtual reality: A pilot intervention to restore cognitive fatigue in patients with Multiple Sclerosis (MS)
The aim of the study is to test the effect of interaction with Nature (nature walks) compared to urban environment using virtual reality on cognitive fatigue in MS patients.
Co-Investigator: Pia Zeinoun, Hani Tamim, Nabil el Ayoubi
Co-Lead: Mariette Awad
Funding: CRS

Principal Investigator: Hala Darwish
Environmental Enrichment and Exercise affects memory and epigenetic events post severe traumatic brain injury
The aim of this study is to explore the effects of environmental enrichment and exercise on learning and memory post severe TBI in a mice model. The epigenetic changes and neurogenesis that follow will be explored as well
Co-Investigator: Firas Kobeissy
Funding: CNRS

Principal Investigator: Hala Darwish
Longitudinal effect of Vitamin D3 replacement on cognitive performance and MRI markers in Multiple Sclerosis patients: A Single-Blind Randomized Clinical Trial

The aim of this study is to investigate the effect of vitamin D supplementation (high compared to low doses) on cognitive performance and brain MRI makers in MS patients with low vitamin D levels at 6 and 12 months post supplementation.
Co- PI: Samia Khoury, Hani Tamim, Nabil el Ayoubi and Salem Hanoun
Funding MPP

Principal Investigator: Hala Darwish
Brief International cognitive assessment for MS (BICAMS)-Arabic
The aim of this study is to validate the well-established Brief International Cognitive Assessment for Multiple Sclerosis (BICAMS) in Arabic.
The test stimuli and administration procedures will be standardized in Arabic. The validity and t he test-
retest reliability of the different tests will be assessed. Finally, we will establish the normative d ata for Lebanon
Co- PIs: Samia Khoury and Bassem Yamout
Funding: Novartis/ MENACTRIMS

Principal Investigator: Hani Tamim
Assessment of Traumatic Brain Injury in Lebanon: A Retrospective Cohort Study
The aims of this study are to assess the burden and magnitude of TBI in Lebanon through estimating the period prevalence, demographics of patients, types and mechanisms of injuries and to assess clinical outcomes of TBI patients and to evaluate hospital management of TBI after classifying them into mild, moderate or severe groups, based on clinical judgment and CT findings as per 2014 CDC guidelines.
Co-investigators: Hala Darwish, Firas Kobaissy, Mazen El Sayyed
Funding: MPP
Status: Data collection.

Principal Investigator: Monique Chaaya
Dementia in Lebanon: a follow-up study
This proposed study aims to follow up on the initial cohort of 408 older adults in order to assess the risk of dementia in terms of incidence and to provide an update on its prevalence. In addition, the study will investigate risk factors of dementia, mortality and morbidity levels, and major health outcomes, specifically hospitalization and nursing home placement. The study also aims to measure caregivers' mental health and burden of care.
Co- PI: Hala Darwish, Ramzi Hajjar
Funding: CNRS
Status: Ongoing

Principle Investigator: Samia Khoury
Microglial activation and neural stem cells cross talk post Traumatic Brain Injury
Microglia are macrophage cells in the Central Nervous System, at the front line of CNS immunological defense. They play an important role in Mild Traumatic Brain Injury (mTBI) which may be beneficial or detrimental depending on their state of activation. This project aims to:

1. Evaluate spatio-temporal activation of microglia cells and the role of microglial activation at 2, 7 & 35 days post-TBI, in rodents.
2. Characterize the behavioral deficits post TBI and correlate outcomes with neural injury and immunological indices.

Co-Investigators: Hala Darwish and Firas Kobeissy
Funding: Office of Naval Research- US Department of Defense (DOD)
Status: Ongoing.

Principal Investigator: Wassim Abou Kheir
Young versus Old: A Potential Role for Vitamin D Supplementation in Modulating Adult Neurogenesis and Hippocampal-Related Functions
The overall aim of this study is to examine the effect of the supplementation with the active metabolite of Vitamin D on hippocampal neurogenesis and hippocampal-related functions in 2-3 months young as well as 24-25 months older adult mice. Our current hypothesis is that Vitamin D3 supplementation will increase the rate of hippocampal neurogenesis and will enhance the hippocampal-related functions, especially in the older adult mice group that is subjected to continuous supplementation. This work will show the importance of Vitamin D in protecting cognitive functions and in inducing adult neurogenesis.
Co PI: Hala Darwish and Noel Ghanem
Funding: Farouk Jabre Award
Status: Ongoing.

Gladys Honein, RN, MPH, PhD
Assistant Professor, Community Health Services Research
Room 520
Extension: 5977
E-mail: gh30@aub.edu.lb

Research Interest:

- A research trajectory focusing on CRC screening, participation, facilitators and barriers, and intervention studies to increase screening participation
- Capacity building for community health nurses. A multi-year, multi-phasic project aiming to empower community health nurses with training on the core competencies of a primary health care nurse
- Qualitative methodology consultation for various faculty at AUB-MC and other Lebanese universities.

Ongoing Research

- Community Health Assessment of Needs and Continuous Empowerment (CHANCE) - An experience-based co-design approach
- Informal Provision of Health Services for Syrian Refugees in Lebanon
- Medical Practice Plan-American University of Beirut (MPP-AUB)

Completed Research

Principal Investigator: Nuhad Dumit
The Impact of the Syrian Refugee Crisis on Nurses and the health care system in Lebanon
The main purpose of this study was to assess the impact of the Syrian Refugee crisis on the health care system and on nurses in particular as voiced by nurses themselves.
Co-Investigators: Gladys Honein, Nathalie Richa
Status: Manuscript preparation

Principal Investigator: Fouad Fouad
Informal Provision of Health Services for Syrian Refugees in Lebanon
This project aims to conduct a mapping of the informal community-led health initiatives within the Syrian refugee population in Lebanon, and to understand how they are coping with the humanitarian assistance gap to cover their needs.
Co-Investigators: Gladys Honein, Lamis Jomaa, Mona Osman, Nasser Yassin, Shadi Saleh.
Status: Manuscript preparation

Principal Investigator: Gladys Honein
User acceptance of electronic patient portal (EPP) for self-management of diabetes and chronic high blood pressure at the Family Practice Clinic of the American University of Beirut, Lebanon
The aim of this study is to explore the demographic characteristics, the perceived ease and usefulness, the subjective and social norms of potential users of Electronic Patient Portal (EPP) at the American University of Beirut Medical Center- Family Practice Clinic (FMC-AUBFMC).
Co-researchers: Dr. Joumana Antoun
Funding: Medical Practice Plan (MPP)
Status: Manuscript preparation

Principal Investigator: Gladys Honein
Towards a Family - Practice Based Primary Care in Eastern Mediterranean Region: Roles and Functions of Nursing and Midwifery Workforce.
In this study, our aim is to gather evidence based on actual practices to evaluate and scale up the primary care workforce in support of implementing family practice in EMRO region. In this report, the main focus is describing the nurses and midwives' roles as part of an inter-disciplinary team and the factors that influence these roles.
Co-investigators: T. Avedissian, M. Arevian, E. Dyer
Funding: World Health Organization, Eastern Mediterranean Office
Status: Report submitted in July; Manuscript will be submitted to Eastern Mediterranean Health Journal on health workforce.

Principal Investigator: Gladys Honein
Community Health Assessment of Needs and Continuous Empowerment (CHANCE) - An experience-based co-design approach
To assess the learning needs of community-based nurses and to develop an intervention training program to address the top priority learning need.
Co-Investigators: Nuhad Dumit, Nathalie Richa, **Mary Arevian, Tamar Avedissian**, Bahia Abdallah
Status: Data collection

Principal Investigator: Gladys Honein
Exploring the benefits and drawbacks of a new approach for managing conflict of interest in guideline development
The Canadian guideline for use of opioids in chronic non-cancer pain used an innovative approach to the management of financial and intellectual conflicts of interest, which was to have a team of unconflicted clinician-methodologists serving on the voting guideline panel, and to have a team of content experts, including individuals with financial and/or intellectual conflicts of interest, to guide the panelists and provide content expertise. This study aims to explore the benefits and drawbacks of this approach, and whether it could serve as a potential model for managing important aspects of conflict of interest in future guidelines.
Co-Investigators: Elie Akl, Samantha Craigie, Jason Busse, Justin Ho, Gordon Guyatt
Status: Manuscript preparation

Principal Investigator: Gladys Honein
Patients' Perceptions of Nurses and Physicians' Listening Behaviors, Education, and Empathy
The purpose of this study is to understand the ways in which medical/ surgical patients, during hospital stay at AUBMC recognize, identify and understand, the ways in which bedside nurses and physicians' behaviors conveyed aspects of communication (listening versus the absence of listening; empathy projected, interpersonal skills and education provider by nurses and physicians).The objective of this study is to assess the patients' perception regarding communication by the physician and nurse and how this affects patient experience and satisfaction.
Co-investigators: Ahmad Diab, Lama Al Jurdi
Status: Waiting IRB approval

Principal Investigator: Lamis Joumaa
Perceptions and Experiences of Community Workers and Syrian Refugees towards Community Kitchens in Lebanon: A Qualitative Study

This research aims at exploring the perceptions and experiences of Syrian refugees and community workers towards community kitchens in Lebanon and identifying the factors associated with the success and sustainability of these kitchens.
Co-Investigators: Gladys Honein, Shady Hamadeh, Nadiya Ibrahim (MSc. Nut.C)
Principal Investigator: Farah Naja
Barriers and opportunities for enhancing subject recruitment and retention in mother and child cohort studies: Findings from the MINA cohort
In this study, we aim at investigating barriers and challenges to participation in cohort studies from the perspectives of both study participants' as well as staff members carrying the immediate responsibility of subjects' recruitment
Co-investigators: Gladys Honein, Ghina Ghazeeri, Lara Nasreddine
Funding: Qatar National Research Fund (QNRF) under the National Priorities Research Program (NPRP)
Status: Manuscript submitted for publication

Principal Investigator: Marlene Chakhtoura
Research Fellowship Program at AUB-MC
In this study, we aim to develop, implement and evaluate a "Research Fellowship Program (RFP)", following the "Six-Step Approach" of curriculum development for medical education
Co-investigators: Gladys Honein, Elsa Salim Karam1, Marlene Chakhtoura2,3,4, Elie A Akl3,4,5,6, Gladys Honein-AbouHaidar7, Rola El Rassi8
Funding: no funding
Status: Manuscript preparation

Principal Investigator: Tamara Lotfi
Evidence synthesis in Low & Middle Income Countries (LMIC): Assessing the capacity building needs of the Global Evidence Synthesis Initiative (GESI) Network centres
The Global Evidence Synthesis Initiative (GESI) is a network of 37 established evidence synthesis centers from 24 LMICs that is meant to enhance the south-south collaboration, knowledge exchange and experience. The goal of GESI to enhance capacity of evidence synthesis centers to undertake multidisciplinary research syntheses. Understanding needs and capacity building for GESI centers is crucial. This study aims to identify the needs of the GESI Network members in order to tailor capacity building activities and link members to potential funders.
Co-investigators: Gladys Honein,
Funding: GESI funding
Status: Manuscript preparation

Principal Investigator: Yasser Shuaib
"Perceived factors influencing participation in Fecal Immunochemical screening test for colorectal cancer among the Lebanese population"
This study aims to examine the perceived factors influencing participation in Fecal Immunochemical screening test for colorectal cancer among the Lebanese population.
Co-investigators: Gladys Honein, Tarek Nammour, Hana Nimer
Funding: no funding
Status: IRB approval

Principal Investigator: Elie Akl
Exploring the factors impacting the trust of the Lebanese public in physicians: a qualitative study

The objective of this study was to explore the factors that impact the trust of the Lebanese public in physicians.
Co-investigators: Gladys Honein, Shaya, Bashir; Al Homsi, Nadine; Eid, Kevin; Haidar, Zeinab; Khalil, Ali; Merheb, Kelly
Funding: No funding
Status: Manuscript preparation

Principal Investigator: Elie Akl
Fellowship and Residency Research Program at AUBMC - Moving Forward
In this study, we aim to explore the views of FRRP residents about the respective programs and the challenges they face in order to fine-tune these programs
Co-investigators: Pamela Abi Khalil, Gladys Honein, Hani Tamim, Bilal Kaafarani, Lara Al Hakim, Zeina Akiki, Rola El Rassi,
Funding:
Status: Manuscript preparation

Principal Investigator: Gladys Honein
"Best practices to increase motivation and entering nursing: A Systematic review
Shortage in nursing is global phenomenon. One important factor leading to this shortage is poor enrollment in nursing education. While a plethora of studies explored the motivation for entering nursing education, understanding effective and best practices to increase motivation and entering nursing education is still not appropriately explored. The purpose of this study is to examine best practices to increase motivation and entering nursing.
Co-investigators: Suzanne Dhaini, Lina Abi Fakhr; Nour Abdallah; Reem Al Sabbagh; Dayana Nasser El Traboulsi; Hisham Jaber
Funding: no funding
Status: Data collection

Samar Noureddine, PhD, RN, FAHA, FAAN.
Professor
Cardiopulmonary Nursing
HSON Room 512
Extension: 5966
E-mail: sn00@aub.edu.lb

Research interests: Health behaviors; cardiovascular risk reduction, management of the chronically ill, cardiopulmonary resuscitation practices

.

Current Research projects:

1. **Principal Investigator: Samar Noureddine**
   Title: Study of the health status, health behaviors, and related work conditions of working Nurses in Lebanon.
   Purpose of the research: The purpose of this study is to describe the health status, risk factors,
   and related work conditions among Nurses in Lebanon
   Co-investigators: Nuhad Dumit, Myrna Doumit, Joelle Seoud, Hiba Chakhtoura.
   Funding: None
   Status: Proposal in preparation.

2. **Principal investigaqtor: Samar Noureddine**
   Title: Current practice related to the management of patients with ST elevation myocardial infarction in Lebanon
   Purpose of the research: This project aims to examine current practices related to the management of patient with ST elevation myocardial infarction among Lebanese cardiologists.
   Co-investigators: Hussain Isma'eel, Sanaa Daouk
   Funding: Vascular Medicine Program, AUBMC
   Status: Proposal writing.

3. **Principal investigator: Samar Noureddine**
   Title: Psychometric testing of the Arabic version of the Minnesota Living with Heart Failure Questionnaire (MLHFQ). A total of 210 heart failure patients are interviewed using the MLHFQ.
   Co-investigators: Mariam Zahweh, Hani Tamim, Amal el Hajje, Samar Rachidi, Hadi Skouri and Hussain Isma'eel.
   Purpose of the Research: The aim of the study is to examine the cultural validity and psychometric properties of an Arabic version of the Minnesota Living with Heart Failure Questionnaire in Lebanese patients with Heart Failure
   Funding: Vascular Medicine Program, AUBMC
   Status: Data collection in progress

4. **Principal Investigator: Samar Noureddine**
   Title: Survey of the Knowledge, Attitude and Practices related to out of hospital Resuscitation among Nurses in Lebanon.

Co-investigators: Tamar Avedissian, Nina Khatib and Joanna Irani.
Purpose of the research: The purpose of this study is to examine the knowledge, attitude and practice of nurses in Lebanon related to out of hospital cardiopulmonary resuscitation. A second aim is to identify factors associated with the willingness of nurses to attempt resuscitation outside the hospital setting.
Funding: Partial funding by the Order of Nurses in Lebanon.
Status: Data collection in progress

5. **Principal Investigator: Samar Noureddine**
Title: Attitudes and Practices related to Cardiopulmonary Resuscitation Practices by Intensive Care Physicians in Lebanon.
Co-investigators: Mira Obeid, Ahmad Husari.
Purpose of the research: The purpose of this study is to examine the attitudes, practices of physicians working in intensive care units and the challenges they face in making resuscitation decisions.
Funding: None
Status: Data collection in progress

WELCOME

Welcome to the Rafic Hariri Hariri School of Nursing (HSON). We are delighted that you have chosen to study nursing at AUB and look forward to meeting each one of you. This is an exciting time for nursing—both at AUB and throughout the world.

In the field of nursing generally, nurses are taking on new and greater responsibilities. Although taking care of patients is still our primary responsibility, we are also playing a role in setting health care policy at the national, regional, and international levels and researching important health care issues.

Here at AUB, we celebrated our 100th anniversary in 2005 and our 110th anniversary in 2015. We have introduced new programs and are constantly updating and revising our curriculum. Our graduates are in great demand and they are occupying leadership positions in different countries in the world. In 2007 the BSN and MSN programs were granted unconditional accreditation by the Commission on Collegiate Nursing Education (CCNE) in the USA for five years and in 2012 the programs were reaccredited for a period of 10 years. AUB Hariri School of Nursing is the first school to be accredited by CCNE outside the USA. In 2008 the HSON received a $10M gift to endow the school and the building and in 2009 the Rafic Hariri Hariri School of Nursing building was inaugurated. The building houses faculty offices, classrooms, an auditorium, a computer lab, skills and simulation lab, a research center, and student facilities.

In 2015, HSON won three major regional awards; HSON received the best institution award, Dr. Huda Huijer the distinguished researcher award, and an MSN graduate the best thesis award. The Chi Iota Honor Society Chapter, the first in the region, was formallychartered by Sigma Theta Tau International (STTI) in 2015 and 131 members were inducted into this prestigious honor society. We continue to be proud of these accomplishments and we look forward to working with you to celebrate these achievements.
We hope this handbook will be a useful guide for you especially during the first couple of weeks when everything is so unfamiliar. If, however, you are lost or need help, please come and find us. We are eager to do whatever we can to make this a positive and rewarding experience for you.

We also welcome any comments or suggestions you may have on how we might change and improve on this handbook in order to make it more helpful for future Hariri School of Nursing students.

Good luck!

Dr. Huda Abu-Saad Huijer, RN, PhD, FEANS, FAAN
Director, Hariri Hariri School of Nursing

Preface

This handbook has been prepared for graduate students in order to provide detailed information about the Master of Science in Nursing Program at the American University of Beirut. Guidelines and policy statements are given to assist in clarifying the process from entry to the program through graduation.

The MSN program in the Hariri School of Nursing was launched Fall 2003-2004. The curriculum with emphasis on Advanced Nursing Practice provides educational opportunities for nurses seeking further specialization.

The faculty and administration of the Hariri School of Nursing hope that the educational process at the American university of Beirut will be a rewarding and challenging experience for each student. We pledge ourselves to assist students in the pursuit of their professional and educational goals.

In addition to the policies found here that are specific to the Graduate Program at the Hariri School of Nursing, the student should obtain and keep a copy of the AUB Graduate Catalogue, which contains policies and procedures that apply to all graduate programs in the University.

The American University of Beirut

The American University of Beirut (AUB) is a private, non-sectarian institution of higher learning, founded in 1866. It functions under a charter from the State of New York and is administered by a private, autonomous Board of Trustees.
The University has five faculties: Arts and Sciences, Medicine-including the Hariri School of Nursing, Engineering and Architecture, Agricultural and Food Sciences, and Health Sciences. In addition to these faculties, the University has a School of Business. At present, AUB offers programs leading to both bachelor's, master's degrees and a number of PhD programs in some Arts and Science and Engineering majors. The University is co-educational. The language of instruction is English.
AUB is a teaching-centered research university, where excellence in teaching and research go hand-in-hand. Its mission is to enhance education, primarily the education of the peoples of the Middle East, to serve society through its educational functions, and to participate in the advancement of knowledge. AUB bases its educational perspective and methods, and its academic organization on the American model of higher education.
The university emphasizes scholarship that enables students to think for themselves, stresses academic excellence, and promotes high principles of character. It aims to produce men and women who are not only technically competent in their professional fields but also life-long learners who have breadth of vision, a sense of civic and moral responsibility, and devotion to the fundamental values of human life. The University believes in and encourages freedom of thought and expression. It expects, however, that this freedom will be enjoyed in a spirit of integrity and with full sense of responsibility.

General Information about the MSN Program

The Hariri School of Nursing at AUB offers the Degree of *Master of Science in Nursing* (MSN) with emphasis on Advanced Nursing Practice. Four tracks are available: Adult-Gerontology Clinical Nurse Specialist with optional minor in Nursing Education, Psychiatric Mental Health

Clinical Nurse Specialist with optional minor in Nursing Education, Community and Public Health Nursing with optional minor in Nursing Education, and Nursing Administration and Management. This MSN program is designed to meet the health challenges of the 21st century in Lebanon and the region, and prepare students for continued studies towards PhD degrees. The clinical tracks prepare graduates as clinical nurse specialists.

The Hariri School of Nursing faculty members are renowned for their research, clinical expertise, innovative teaching strategies, and contribution to professional practice at the national level.

Mission Statement

The mission of the Hariri School of Nursing is to promote and maintain the highest educational standards of excellence, integrity, and professionalism in nursing, following the American model of nursing education and practice. The school aims to provide learning opportunities that will enable students to develop into competent nurses who respect cultural diversity while coordinating and delivering high–quality, compassionate nursing care in Lebanon and beyond, guided by ethical principles. The faculty believes education is an interactive process between faculty and students with both taking responsibility for active learning. The baccalaureate program, drawn primarily from the humanities, sciences, and caring disciplines, focuses on the use of nursing theory and research as a basis for practice. The master's program focuses on preparing nurses for advanced nursing practice roles. It is based on the use and generation of research-based knowledge to guide practice. Nursing students at AUB learn to think critically, develop professional attitudes and leadership skills, and appreciate the value of life-long learning and freedom of speech.

Philosophy

The Master of Science in Nursing Program is consistent with the philosophy of the American University of Beirut and the mission of the Hariri School of Nursing, and builds upon the knowledge and competencies that characterize the undergraduate program. Graduate education denotes the critical appraisal of concepts and theories basic to the Nursing discipline. The unifying focus in graduate education is specialized and research-directed nursing practice. Graduate education promotes the process of inquiry for the expansion and testing of knowledge; and fosters creativity, critical thinking, professional development, research**,** and leadership skills.

Learning Outcomes

The program provides students with a thorough understanding of the theoretical basis of practice and also incorporates managerial, administrative and educational skills. The graduate is expected to be an expert clinician, an informed educator, a knowledgeable researcher and a skilled manager.

Specifically, the MSN program will prepare nurses who:

1. Integrate theory and research in nursing and related disciplines as basis for advanced nursing practice and role development.
2. Participate in conducting research within collaborative teams to improve care outcomes and support policy changes

3. Deliver advanced practice nursing based on critical thinking, research evidence, and advanced knowledge and skills in specialized area of nursing.
4. Demonstrate advanced clinical and data driven decision-making across health care settings.
5. Analyze the impact of socio-cultural, economic, ethical, legal and political issues on nursing practice, health promotion strategies and health care delivery.
6. Assume leadership roles in education and management, utilizing inter-and intra-disciplinary approaches and systems thinking.
7. Analyze current and emerging technologies to optimize patient safety, cost-effective care, and quality and health outcomes'.

Admission to the MSN program

A student is eligible for consideration for admission to the MSN program if s/he fulfills AUB admission requirements for graduate studies. The criteria for admission to the MSN program are:

1. Meeting all the university admission requirements to graduate studies.
2. Having a BSN degree or its equivalent from an accredited/recognized institution.
3. Having a cumulative undergraduate cumulative average of at least 75, with an undergraduate average of at least 80 in the major Nursing.
4. Demonstrating evidence of knowledge and competence in physical assessment skills.
5. Satisfactory scores on the English Entrance Exam or Test of English as a Foreign Language, as per AUB requirements for graduate studies.
6. License to practice nursing from country of residence.
7. One year work experience in nursing.

Categories of Admission

Applicants for graduate study may be considered for admission in one of the following categories:

Graduate Regular
A candidate qualifies for this category if s/he holds a bachelor's degree from AUB or an equivalent degree from another recognized institution with an undergraduate average of at least 80 or its equivalent in nursing.

Graduate on probation
Candidates who fail to meet any of the admission requirements but who, in the opinion of the faculty, demonstrate potential for graduate study, are admitted as 'graduates on probation.' Students with a cumulative undergraduate average of at least 75 but less than 80 in the major field (nursing) may be conditionally admitted as graduate student on probation. These students should score 80 or above in the first nine graduate credits in order to be transferred from special status to regular status.

English Language Proficiency Requirement (ELPR)

Applicants to any graduate program other than AUB graduates and graduates of recognized colleges or universities in North America, Great Britain, Australia, and New Zealand, must demonstrate proficiency in the English language. This can be done by submitting official test scores for (at least) one of the following tests: English Entrance Examination (EEE), Test of English as a Foreign Language (TOEFL), International English Language Testing System

(IELTS), GRE (Verbal Part), GMAT (Verbal Part).
A score of 550 on the English Entrance Examination (EEE), or 600 on the paper-based Test of English as a Foreign Language (TOEFL), or 250 on the computer-based TOEFL or 97 on the internet-based TOEFL, or 7.0 on the IELTS, or 153 on the Verbal Part of the GRE (or 500 if the GRE test was taken prior to August 1, 2011), or 25 on the Verbal Part of the GMAT exempts applicants who have been admitted from taking additional English language courses.

Graduate ELPR: Applicable to students joining AUB at the graduate level

Exam English Course Placement	NEW AUB EEE (After Jan 2017)	AUB EEE (English Entrance Exam)	TOEFL (PBT)	TOEFL (IBT)	IELTS (Academic)	GRE (Verbal)	GMAT (Verbal)
Exam Validity	***1year***	***1year***	***2years***	***2years***	***2years***	***5years***	***5years***
Intensive English 100A/100B (If faculty approves)	25-31	375-499	490-570	57-87			
English 300	32-39	500-529	573-582	88-96			
No English courses	>=40	>=530	>= 583	>= 97	7.0	>= 147	>= 25

ELPR Exemption: Some applicants might be exempted from the ELPR requirements as per below

Application Type	Conditions for ELPR Exemption
Freshman	Not Applicable
Sophomore	No ELPR exemption applies to those application types
Transfer (Advanced Standing)	Given to Candidates who studied for 2 years at a university in US/UK/Canada/Australia/New Zealand
Visiting Exchange Non-Degree	Given to Candidates who studied for 2 years at a university in US/UK/Canada/Australia/New Zealand, or to those who have completed 2 years of higher education with English as the primary language of instruction, or to those who are enrolling ONLY in Arabic language courses
Second Degree Diploma Graduate & PhD First Year Medicine	Given to AUB graduates or graduates of recognized colleges and universities in US/UK/Canada/Australia/New Zealand
Pro-Green Diploma	Given to AUB graduates or graduates of recognized colleges and universities in US/UK/Canada/Australia/New Zealand, and graduates of universities where the language of instruction is English

Summer Preparatory English Program

Applicants who score between 475 and 499 on the EEE, or between 550 and 572 on the TOEFL (or between 213 and 229 on the computer-based TOEFL or between 81 and 87 on the internet-based TOEFL), or between 6.0 and 6.5 on the IELTS, may take UPGR 001 Preparatory English for Graduate Students, as shown in the table below. Those students need to pass UPGR 001 with an average grade of 70 in order to enroll in their majors (see UPP section pp. 195 in the Graduate Catalogue).

Score on English language proficiency test					English course
Computer-	**Paper-**	**Internet-**	**EEE**	IELTS	

based TOEFL	based TOEFL	based TOEFL			
213-229	550-572	81-87	475-499	6.0-6.5	UPGR 001

Applicants who do not submit official English language proficiency test scores or those whose test scores fall below 475 on the EEE, or 550 on the paper-based TOEFL (or below 213 on the computer-based TOEFL, or below 81 on the internet-based TOEFL), or below 6.0 on the IELTS, may also register in UPGR 001. Those applicants will not be able to join their graduate programs unless (1) they pass UPGR 001 with an average grade of 70 and (2) obtain a minimum score of 475 on the EEE, or 550 on the paper-based TOEFL (or 213 on the computer-based TOEFL, or 81 on the internet-based TOEFL), or 6.0 on the IELTS. For more information, students should contact their respective departments.
After successful completion of UPGR 001, students must take English 300.

Transfer of Credits

School of Nursing**Revised**

Transfer of Credits from One Master's Degree to Another Graduate courses taken at AUB (or at other recognized institutions), in which the applicant earned an equivalent grade of 80 or above, may be transferred to another master's degree at AUB. No more than 9 credits are transferable provided they are not credits earned by an internship, thesis or practicum, and degree minimum residency requirement is maintained. Approval by the department or the academic unit concerned and the Faculty/School Graduate Studies Committee is required for all transfers. Normally, credits counted toward another graduate degree at AUB or another institution cannot be transferred if they have already been used to satisfy requirements for another awarded graduate degree.

Graduate Council

The Graduate Council (GC) reports to the Provost of the University and plays a vital role in implementing the rules and regulations governing graduate work uniformly across the University, in accordance with policies approved by the Board of Graduate Studies (BGS) and the Senate, and as recommended by the faculties and schools. The Graduate Council facilitates and coordinates graduate education and follows up on the implementation of graduate policies and deadlines. The Graduate Council works closely with the BGS and Faculty Graduate Studies Committees to provide mechanisms for the quality control of all aspects of graduate education. In cooperation with faculty, students, and staff, the Graduate Council undertakes preparatory steps and coordinates graduate recruitment programs to ensure a selection process from a highly qualified pool of student applicants; provides information about admissions to all graduate programs; administers graduate standards of scholarship and policy; and encourages the development and success of students through workshops, training activities, counseling, and initiatives that promote timely degree completion. The Graduate Council also administers AUB policies concerning graduate assistantship appointments.

Registration

Academic Year
The academic year at AUB includes two semesters, fall, and spring, followed by a summer session. Each semester has a reading period and a final exam week. For the exact dates, see the AUB Calendar.

Orientation
All entering students attend the three –day orientation program consisting of meetings in Faculties and Departments; meetings with representatives of various university services; tours of the campus; Agriculture Research and Educational Center (AREC), and the country; and acquaintance social events.

Course Registration

New students register on-line via the Internet during September at a date indicated at the University Registrar for the fall semester of an academic year.
Check details of on-line registration under Course Registration for New Students and Consult the Registration Guide available in the Office of the Registrar.
Continuing students will register before the end of each semester for the upcoming academic semester. The registrar announces all registration dates.

Deferred Registration
Graduate students who are offered admission for a semester and who do not register for that semester may be eligible for admission to the spring semester of the same academic year, pending availability of places. A petition should be submitted to the Office of Admissions.

Late Registration
Students unable, for some unforeseen reason, to register at the scheduled time may attempt late registration. A late registration fee of LL150, 000 for students will be charged Late registration is to be avoided, as many courses may become full.

Drop and Add
After the start of classes, at a date indicated in the University Registrar, students may make changes in their schedules through a process known as Drop and Add. After obtaining the approval of their advisers, students may make changes in their courses on the web according to a pre-announced schedule. They may need to settle their accounts at the Office of the Comptroller.

Fees and Expenses

The American University of Beirut is a non-profit institution. The charge to students is kept at the minimum consistent with the provision of high quality instruction and adequate resources. The University reserves the right to change any or all fees at any time without prior notice. Such changes will be applicable to students currently registered in the university as well as to new students.
Students will not be permitted to enter classes at the beginning of the term until their fees are paid or special arrangements have been made with the university comptroller. All fees are quoted in Lebanese pounds and US dollars.

Payment of Fees
Each AUB student must pay all his/her tuition fees and other charges levied.

1. All students must finalize registration, including payment of tuition fees and other charges according to the academic calendar for the first and second semesters. Under special circumstances, late registration will be permitted during a period of no more than five working days after the announced deadline, but subject to a late registration fee.
2. Students who demonstrate financial need may make formal application for deferred payment arrangements for tuition fees only to the Office of the Comptroller according to the academic calendar for the first and second semesters. No applications for deferrals will be accepted thereafter. Deferred payments are not a right and will only be agreed to under specific and special circumstances. Students who arrange for deferred payments are still required to complete all registration formalities within the set deadlines. Deferred payment arrangements are not permitted for the summer session in any faculty.
3. A graduate student who applies for deferred payment must pay at least 50% of the net amount of tuition due. All other charges must be paid in full with no deferrals. A student must pay a deferred payment application fee of $33, whether approved or not. Should the student's application be approved, the student must pay the balance, plus a deferred application fee of $33, together with the late payment fee, if applicable. All the above arrangements must be concluded by the announced deadlines.
4. Every student granted deferred payment must sign a statement indicating agreement that failure to complete payment by the set deadline will result in receiving no credit for the semester in which the student has defaulted on payment.

Students are expected to meet all financial obligations by the appropriate due date. The university reserves the right to place an encumbrance on the student's record, which will prevent registration for future semesters and the release of transcripts and diplomas, as well as access to other university services by any student who fails to promptly meet his/her financial obligations to the university. It is each student's responsibility to be informed of all registration and payment dates and deadlines.
Up-to-date schedules for registration and payment of fees may be obtained from the Office of the Registrar (ext: 2570 /2571), or at the e-mail address: registrar@aub.edu.lb

Academic Rules and Regulations

Categories of Students

To be considered a full-time student, a student must carry a minimum load of 9 credits per semester. For summer full-time, the required load is 6 credits. Students can normally register for up to 12 credits per semester and 6 credits during the summer session. The category of part-time students applies to those carrying less than 9 credits per regular semester or less than 6 credits for the summer.

Supervision

Each student has an academic adviser who must approve the student's schedule each semester. The student's adviser is appointed by the graduate faculty of the school. These advisers will maintain their relationship with the students until they graduate from the graduate program.
Every academic adviser is expected to guide and help in planning the student's course of study. Not all courses need to be in nursing, but they should be in the judgment of the department relevant to the field in which the student is specializing. For students working towards a thesis, a thesis adviser is assigned who must be a full-time faculty member and will serve as chairperson

of the thesis committee. The thesis adviser and the members of the thesis committee should be of professorial rank.

Attendance

- Students are expected to attend all classes, laboratories and any required activities. Absence of students, whether excused or not, from any class or laboratory session does not excuse them from their responsibility for the work done or for any announcements made during their absence.
- Students who absent themselves during a semester more than ***one third*** of the number of hours of any course lose all credit for the course.
- Students may *not* be excused from laboratory and field requirements. All missed clinical and field requirements must be made up. In case of repeated absences from clinical courses, ***over one third of the total hours***, the student may be asked to drop the course.
- Students who fail to sit for scheduled examinations, or fail to fulfill course requirements, will be given the minimum grade for graduate courses, which is 55. Results of tutorial courses, clinical and administrative residencies, projects, or theses will be reported as pass (P) or fail (F).

Examinations and Quizzes

Students may not absent themselves from announced final examinations and quizzes unless they present an excuse considered valid by the coordinator of the course. The course coordinator may then require the student to take a make-up examination.

Computer Literacy

Masters students are expected to have a basic level of computer literacy. Ability to use Microsoft Word, Power Point and spread sheets software is a minimum requirement, since most courses require term papers and oral presentations. For students who are weak in this area, a number of workshops on the use of various computer programs are offered regularly by the Academic Computing Center, accessible through AUB website, or by calling 2260 or 3580. Students must also know how to do electronic literature searches using databases such as MEDLINE and CINHAL. The Saab Medical librarian offers regular sessions Mondays at 6 pm, or per request about searching the literature. Call Miss Aida Farha at 5911 for further questions.

Courses and Grades

Courses taken as part of a student's graduate study program fall in one of two categories: graduate or prerequisite, with different grading systems.

- *Graduate Level Courses*
  Graduate level courses in Nursing are numbered 500 and above. The minimum passing grade for a graduate course is 70. However, students are required to maintain a cumulative average of at least 80 in all courses taken for graduate credit. Projects, thesis and residency Courses are graded as Pass/Fail.

- *Prerequisite Courses*

These are usually undergraduate courses taken to make up for any deficiencies in the student's background. They do not carry graduate credit. The minimum passing grade for a prerequisite course is 70.

Grading System

Evaluation of the student's achievement will include their work in theory, practice, as well as professional attitudes and behavior.

In the Hariri School of Nursing the following grading system is used:

90-100	Outstanding	I	Incomplete
85-89	Excellent	P	Pass
80-84	Very Good	PR	In Progress
75-79	Good	W	Withdrew
70-74	Fair	X	No Grade Reported
60-69	Weak		
Below 60	Fail		

Incomplete Grades

A student who has an incomplete on one course must complete the work required for the course within one month of the start of the next regular semester. In exceptional circumstances the graduate committee may decide to give the student additional time to complete the course. Incomplete course work will be reported as "I" that is followed by a numerical grade reflecting the evaluation of the student available at the end of the semester. This evaluation is based on a grade of zero on all missed work and should be reported in units of five. If the work is not completed within the period specified, the "I" is dropped and the numerical grade becomes the final grade.

Probation and Dismissal

A student working towards a master's degree in Nursing "MSN" may be placed on probation by the Hariri School of Nursing Graduate Committee if he/she:

- Is admitted to graduate study on probation,
- Fails in any course taken for graduate credit, and
- Does not maintain the required cumulative average of 80.

The probation may be removed upon the recommendation of the Graduate Studies Committee of the School if the student has completed a minimum of 9 credits of graduate level courses within the two consecutive semesters after being placed on probation, has passed all courses, and has obtained the cumulative average of 80. If the student fails to meet any of these conditions, s/he will be dropped from the program.

The graduate committee may discontinue a master's student from graduate study if:

- Probation status is not removed within a period of two semesters in which the courses that are taken are for credit, or
- In the opinion of the department, and irrespective of the grades obtained, the work of the student is deemed unsatisfactory, or
- The student fails the comprehensive examination twice, or fails the thesis defense twice.

Leave of Absence

- All graduate students are expected to make steady and satisfactory progress toward the completion of degrees. Students who are not enrolled for a period of more than one academic year (two consecutive regular terms and one summer) will be considered to have withdrawn from the program unless they apply for a leave of absence and secure approval of the department, Faculty/School Graduate Studies Committee, and Graduate Council.

- The leave of absence application can be up to one academic year at a time. The maximum period of approved leave of absence is for two academic years. An approved leave of absence does not count towards maximum residency. Non-enrollment by the student for one semester without securing leave of absence will count towards maximum residency.

- Students who seek to return without having secured leave of absence approval after a non-enrolment period of more than one academic year must reapply and will be considered for readmission following regular AUB application/admission procedures. If re-admitted into the same graduate program, then their earlier status as graduate student will count towards maximum residency.

- The Leave of Absence Application Form should normally be submitted to the respective department/faculty at least one month prior to the beginning of the semester in which absence is planned.

Readmission

The following factors govern students seeking readmission:

- Students in good standing who withdrew voluntarily shall be granted readmission to the School if the period between the end of the semester or session of withdrawal and the beginning of the semester for which readmission is sought is not more than four regular semesters. The readmission request must be submitted to the Office of the Registrar at least one month prior to the beginning of the semester or the summer session to which readmission is sought.
- Students who have left the university for more than two years must submit the readmission request to the Office of the Registrar and must have the approval of the Admissions Committee of the Hariri Hariri School of Nursing.
- Students who have left the School while on probation will remain on probation for one semester and are required to take 12 or 13 credits. If they do not remove the probation at the end of the semester, they will be dropped from the School.

Masters' Completion Program

Overview of the Curriculum

The curriculum includes 37 to 40 credits (depending on the track of study) and may be completed in two years on a full-time basis. Part time students must complete the program requirements within a maximum period of four years. Extension beyond the maximum allowed

period of study requires the approval of the Graduate Studies Committee of the faculty and the Graduate Council.
The components of the master's program include: 1) Core courses, 2) Specialty courses, and 3) Elective Courses. The Hariri School of Nursing offers the MSN degree in the following four tracks:

1. Adult-Gerontology Clinical Nurse Specialist (39 credits), with an optional minor in Nursing Education,
2. Nursing Administration and Management (37 credits)
3. Psychiatric Mental Health Clinical Nurse Specialist, with an optional minor in Nursing Education.(40 credits)
4. Community and Public Health Nursing, with an optional minor in Nursing Education (40 credits)

Both thesis and non-thesis options are available in all tracks. Below is a general description of the courses required for graduate education in nursing. Students may receive credit for graduate level courses only. Appendix A provides sample study plans for students in the various tracks for full time and part time study.

Curriculum Masters of Science in Nursing

Core Courses		**Lecture Hrs/Week**	**Clinical Hrs/Week**	**Credit Hrs.**
NURS 500	Theories, Concepts and Ethical frameworks for Advanced Nursing Practice	2	0	2

Students may take an equivalent of 3 credits as elective in any major that helps them with their studies. For students doing a minor in nursing education, the elective credits must be in education.
The Hariri Hariri School of Nursing also offers special topic courses ranging from 1 to 3 credits that cover nursing issues of interest to students in the various tracks. These courses can be counted toward the elective credits.

Course Description

NURS 500 Theories, Concepts and Ethical Frameworks for Advanced Nursing Practice 2.0; 2 cr.

This course introduces students at an advanced level to conceptual resources for advanced nursing practice. The course is organized around four themes: conceptions of science and nursing knowledge; antecedents and applications of theories relevant to nursing practice; healthcare ethics; and, nursing and politics. The course focuses on the application of conceptual models to current and future nursing practice.

NURS 501 Advanced Nursing Practice: Scope and Roles 2.0; 2 cr.

This course provides the student with knowledge related to the advanced practice roles and competencies. Students develop a vision and structure for Advanced Nursing Practice that includes the Consensus Model for Advanced Practice Registered Nurse, regulation, credentialing, and emerging professional issues. The course concentrates on the foundations and philosophy of care in different specialties and health care.

NURS 502 Advanced Nursing Research 3.0; 3 cr.

This course focuses on complex research designs, interpretation of research findings and development of research proposals. The interrelationship of theoretical frameworks, quantitative/qualitative design, sample selection, data collection instruments, and data analysis are analyzed in terms of clinical nursing research problems.

NURS 503 Advanced Health Assessment 2.3; 3 cr.
This course focuses on the advanced comprehensive assessment of individuals using a case based approach. Students are provided with advanced knowledge and skills in clinical interview, focused history taking, psychosocial and physical assessment, and diagnostic reasoning.

NURS 503A Advanced Health Assessment for Mental Health 1.0; 1 cr.
This theory course focuses on the comprehensive health assessment of clients using a biopsychosocial approach. Mental health students will build on their knowledge and skills in clinical interviewing, focused history taking, and critical analysis of client data to identify actual and potential health problems. The focus will be on the differential diagnosis of various case presentation with organic and psychological etiologies.

NURS 504 Advanced Pathophysiology 3.0; 3 cr.
This is a course in advanced pathophysiology related to acute and chronic illnesses experienced by adults. Emphasis is placed on pathophysiologic nursing phenomena experienced across diseases, their manifestations and assessment measures. Case studies are used to illustrate application to advanced nursing practice.

NURS 505A Advanced Practice in Adult-Gerontology I 2.8; 4 cr.
This course builds on N504 & N503 and includes a theory and a clinical component. Emphasis is on further refinement and extension of pathophysiological concepts and assessment skills in the management of clients with a spectrum of health problems. Health promotion and risk reduction strategies are also addressed. *Prerequisites: NURS 503*.

NURS 505B Advanced Practice in Adult-Gerontology II 2.8; 4 cr.
This course addresses advanced nursing practice in adult care and includes a theory and a clinical component. Emphasis is on further refinement and extension of pathophysiological concepts and assessment skills in the management of adults and older adults with acute and critical care conditions. . *Prerequisites: NURS 503 and NURS 504*.

NURS 506 Advanced Practice in Adult-Gerontology III 0.16; 4 cr.
This is a practicum in which students apply content learned in NURS 503, 504, 505and 515, and use concepts learned in NURS 501 and PHRM 314, in the advanced management of adult clients with various illnesses. Interdisciplinary collaboration, research utilization, educational activities and case management are emphasized in a specialty area of practice. *Prerequisites: NURS505B and PHRM 314.*

NURS 507 Essentials of Nursing Administration and Management 2.0; 2 cr.
This course introduces management concepts and techniques. It focuses on three core topics: roles and responsibilities of managers; leading organizational effectiveness; and strategic planning. The focus is on using management models and concepts to work towards improved organizational effectiveness. Case studies of organizational problems provide the basis for group practical work.

NURS 508 Advanced Practice in Nursing Administration 0.16; 4 cr.
This practicum focuses on developing advanced management and administrative nursing skills in hospitals and primary health care settings. *Prerequisite: NURS 507.*

NURS 509 Role Development in Nursing Education 3.0; 3 cr.

This course addresses principles of teaching and learning, instructional methods, test construction and use, as well as curriculum and program development as applied to nursing. The course enables students to apply educational theory and research in various settings such as schools of nursing and staff development centers. **Required for the minor in education.**

NURS 512 Advanced Psychiatric and Mental Health Assessment 1.3; 2 cr.
This course focuses on the advanced comprehensive mental health assessment of individuals using a case based approach. Students are provided with advanced knowledge and skills in clinical interview, focused history taking, mental status examination and diagnostic reasoning. The student performs comprehensive assessment and D.S.M. IV diagnosis on adult populations.

PHRM 314 Advanced Pharmacology and Therapeutics 3.0; 3 cr.
This course covers pharmacology and drug therapy related to advanced nursing practice. General principles of pharmacokinetics pharmacotherapeutics, pharmacogenetics and considerations for special populations are covered. Classes of drugs, their mechanism of action, drug selection, dosage, therapeutic and adverse effects, and patient monitoring are discussed using case studies of clinical conditions. *Students are required to have taken pharmacology at the undergraduate level before PHRM 314*.

NURS 516 Psychopathology and Human Behavior 3.0; 3 cr.
This theory course examines the effects and/or sequels of alterations in selected bio-behavioral processes in the adult human suffering from illnesses with critical onsets and long-term unstable conditions. It focuses on the study of the brain and behavior and the neurological, physiological and biochemical foundations of cognition, mood and affect. Students will be exposed to advanced assessment skills, selected theories and research to identify complex psychiatric disorders and interventions utilizing case studies.

NURS 517 Models of Treatment-Psychotherapy 1.6; 3 cr.
(Bio-behavioral Nursing Interventions)
In this course, students learn the models of treatment of psychiatric and mental health disorders, and become trained on psychotherapeutic interventions in acute settings. Theories on individual psychotherapy, crisis intervention, group and family therapy are covered. This course has a clinical component where students do practicum in a psychiatric care department. In this course students learn the application of the acquired knowledge in the field of practice and start to practice their role.

NURS 518 Group and Family Psychotherapy 1.6; 3 cr.
This course is complementary to the "Models of Treatment" course, and it focuses on group and family psychotherapeutic interventions. Students synthesize knowledge of theories in the provision of care to groups and families with complex psychiatric problems. Family and group intervention strategies are discussed in a variety of settings. Students explore the practice of these interventions in psychiatric care departments.

NURS 519 Clinical Residency in Acute Psychiatric Care 0.16; 4 cr.
The purpose of this clinical practicum course is to provide opportunities for students to apply the content learned from courses. Students will use assessment skills, selected theories, and research to identify complex health problems and interventions for diverse populations. The focus is on advanced case management and practice of the role, which is further developed as the student integrates theory and practice skills in acute and chronic or community settings. Students will spend 224 hours of clinical hours under the supervision of a preceptor.

NURS 520 Managing Quality With Teams 3.0; 3 cr.
This course addresses theory and application of quality teams, their composition, purposes, function, and decision making tools. Process improvement team and the use of mapping processes for process improvement are a main focus.

NURS 522 Principles and Practice of Community Health Nursing 2.3; 3 cr.
This course introduces concepts and issues relevant to the advanced practice of public and community health nursing. Areas of focus include health promotion, management of chronic disease and health education. The course will use case studies in class and field work in the community.

NURS 523 Advanced Community Assessment and Interventions 2.3; 3 cr.
This course focuses on the nursing assessment of the health of communities using a case based approach. Students are provided with advanced knowledge and skills in population and individual needs assessment and community based interventions. Clinical experience will be provided.

NURS 524 Clinical Residency in Public and Community Health Care 0.16; 4 cr.
The purpose of this clinical course is to provide students with opportunities to apply content learned in community courses, with a focus on advanced case management and health promotion. Assessment skills, theories and research will be utilized in identifying health problems and planning community interventions. *Prerequisites: NURS 522 and NURS 523.*

NURS 525 Leadership Theories and Applications for Nurse Managers 3.0; 3 cr.
The aim of this course is to promote familiarity with, critical thinking about, and applications of evidence-based theories of leadership in nursing settings. The course encourages a reflective and analytical approach to cultivating effective personal leadership behaviors. The course introduces the full spectrum leadership model, examines its transformational leadership components in depth, and explores similarities and differences between transformational leadership and related leadership theories.

NURS 527 Systems Approach to the Development and Evaluation of Health Care Services 3.0; 3 cr.
The purpose of this course is to introduce students to the development and implementation of health service programs/projects intended to improve health care, practice, and health system's outcomes. The course addresses assessment of contemporary issues affecting health such as those of the epidemiology of diseases, healthcare policies, socio-cultural, geo-political, and economic. It focuses on the theory and practice of planning from a system's perspective and introduces conceptual approaches and techniques of program evaluation. Students will prepare a project plan as part of the course.

NURS 526 Comprehensive Exam 0 cr.

NURS 530 Statistical Reasoning and Application in Nursing Research 1.2; 2 Cr.
This class introduces students to the basic concepts and applications of statistics for nursing research and how to carry these applications using SPSS. The primary objective of the course is to provide students with the skills necessary to understand basic statistical analyses and carry out those analyses using SPSS. Descriptive, bivariate and linear multiple regression are covered.

NURS 531 Practical Applications of Budgeting in Nursing 1.0; 1 cr.
This course focuses on practical applications of concepts in budgeting and basic financial management. Participants will learn to develop a budget and evaluate the financial status of a department or operating unit and determine what, if any, corrective actions need to be taken. The course presents various analytical methods in management decision making, including variance analysis, and break-even analysis.

NURS 533 Digital Tools for Connected Health 3.0;3 Cr.
The above course is currently taken in collaboration with the University of Colorado Denver as NURS 6284.The course examines the use of digital tools to foster engagement of patients, families and consumers in their health care. This course examines the evidence and the legal, ethical, social and policy issues within the context of connected health

NURS 598 Project 3 cr.
Special projects directed toward acquiring skills needed in the development of programs relevant to nursing care within the student's area of interest. Projects vary depending on the track of study.

NURS 599 Thesis 6 cr.

Below are courses in other faculties that students in the Nursing Administration and Management track and Community and Public Health Nursing track can take:

HMPD 302 Health Management & Policy (3 credits): The course focuses on the managerial and planning skills needed by all public health graduates. The course is designed to introduce students to policy making; the role of private and public sector planners, decision makers and administrators in the policy-making process; policy/program implementation; management; and evaluation.

HMPD 311 Health Information Systems (2 credits): This course will introduce basic concepts of information systems, with an emphasis on applications in the management and operations of health care organizations.

HMPD 315 Performance Improvement (3 credits): The course examines the two dimensions of the service delivery process; the provider, and the service. In this context, the course consists of two interrelated modules emphasizing the role of human resources management and service excellence in improving the performance in health care settings.

HMPD 325 Quality Management and Accreditation in Health Care (2 credits):
A course that examines at multiple levels the theory and practice of quality management and accreditation in health care organizations. The objectives of the course are to: (1) convey an understanding of quality of care, with particular attention to conceptual framework for continuous quality improvement, quality assessment, improvement and patient safety including approaches, methods and tools, (2) explain how to develop a quality improvement plan, performance indicators and measurement systems for quality and accreditation; and (3) address ethical issues related to quality management, risk management and patient safety with particular attention to Lebanon and the region.

HMPD 342 Financial Management and Accounting (3 credits): The course covers the basic skills of modern financial management and accounting, and the utilization of its concepts and tools to make decisions in health care organizations

MNGT 330 Total Quality Management (3 credits): An advanced analytical account of TQM as a modern management philosophy and program for achieving and sustaining customer satisfaction. Relevant TQM knowledge base will be highlighted with emphasis on the executive role and intensive use of practical applications.

MNGT 332 Human Capital Management (3 credits): An advanced analysis of the human resource function and the challenge of managing human capital in a modern corporation. The course highlights the interrelationships of the different human resource management functions and the strategic role of the HR in today's environment, and capitalizes on new trends and actual case examples to illustrate current HR best practices. **Required in the nursing administration and management track.**

MNGT 340 Organization Theory (3 credits): An analytical overview of management thinking with special emphasis on concept-formation, methodology, organizational models, management functions, processes and major schools of thought.

EPHD 300 Principles of Epidemiology (3 credits): A course in principles, concepts and applications of epidemiology in the public health field. The course consists of lectures, assigned readings and complementary practical sessions that provide students with basic epidemiological knowledge and tools relevant to public health practice. Students are given the opportunity to acquire an understanding of the vocabulary of epidemiology and methods of epidemiological research, investigation and control. Topics covered include rubrics of epidemiology, morbidity and mortality measures, sources of epidemiological data, outbreak investigation, epidemiological study designs, causal inference and causation in epidemiology. This course also covers an overview of the major biological agents associated with infectious and communicable diseases with a focus on disease ecology, etiology, transmission and contagion modes. **Required for the Community and Puublic Health Nursing Track students.**

Minor in Education. *Possible Courses include:*

EDUC 301 Seminar in the History and Philosophy of Education (3 credits*):* Development of educational thought and practice through primary sources. Systems of educational theory will be examined from the age of Pericles to post World War II, with special emphasis on contemporary educational practice. *Annually.*

EDUC 315 Psychology of Education (Advanced) (3 credits): A comprehensive analysis of instructional theory, measurement skills, cognitive development, learning theory, and methods of applying behavior modification in the classroom*. Prerequisite: EDUC 215. Annually.*

EDUC 326 Theory and Design of Curriculum (3 credits): Examination of organization, scope, and sequence of curricula with special emphasis on various approaches to curriculum development. *Annually.* **Required for the minor in education.**

EDUC 318 Test Construction in Education (3 credits): Development of testing techniques and skills for appraisal of the cognitive and affective objectives of instruction. *Alternate years*. Other possible courses include EDUC 303, 313, & 330. **Required for the minor in education.**

Comprehensive Examination

Students are required to sit for a written comprehensive examination according to AUB regulations. The purpose of this exam is to assess the students' overall synthesis of all the components of the Master's degree program, i.e. integrating of theory, practice, and research.
The student must pass the comprehensive examination after completion of most of the course requirements for the MSN degree. Students must register NURS 526 (zero credit course) the semester during which they plan to take the comprehensive exam. Students must take the comprehensive exam before doing their residencies and projects, except full time students who may take it concurrent with their project or residency. The Graduate Committee of the Hariri School of Nursing shall set the timing of the examination. The student who does not pass the comprehensive examination may take it a second time after a period of at least three months. See Appendix B. **The comprehensive examination is offered twice per year (November and April); dates are announced early during the academic year**.

Thesis/Project

Two types of master's degree programs are available:

- *A master's program requiring a thesis* based on independent research work. Students following this program are required to take a minimum of 31 graduate credit hours and to present a 6 credit thesis.

- *A non-thesis master's program*: The student following this program is required to take a minimum of 34 graduate credit hours and do a 3 credit hour project that should be approved by the student's advising team.

For those students enrolled in the MSN with thesis option, the student must submit a thesis based on original, independent research. The thesis must be in English. An abstract not exceeding 350 words must be submitted with the thesis. Once approval for writing the thesis/project is granted, students must conform to the University Thesis Manual found in the library. Application of the thesis manual is mandatory, and those not conforming to its requirements will not be accepted. The student must submit copies of the thesis to the members of thesis committee, unbound but ready for binding, at least two weeks before the thesis defense.

Guidelines for Thesis and Project

All MSN students are required to develop a scholarly product that contributes to the generation or application of knowledge to enhance practice, education, theory or policy. The student should negotiate the scope and objectives of the product with the faculty advisement team. For a thesis, the advisement team would be the thesis committee. For a project, the team would include the student's adviser and a second reader. The composition of the project advisement team shall be approved by/communicated to the program coordinator.
MSN students need to declare their choices of the thesis/project soon after enrollment, preferably making specific plans about the thesis/project by the time they have completed 12 credits so that this requirement can be completed in a timely manner.

The AUB HSON utilizes the writing guidelines of the American Psychological Association (APA) 6th Edition in all written requirements such as term papers of courses. The link below provides

adequate guidance for how to organize papers, cite references inside the text and display the reference list using the APA style:

https://owl.english.purdue.edu/owl/resource/560/01/

Project

Project types assume comparable levels of student involvement, performance and scholarship. Projects must be over and above papers and projects completed for course requirements. Options for the project include:

1. **Report of Research Findings**: students may use existing data under a faculty member's guidance to prepare a scholarly paper of publishable quality.
2. **Research Experience**: Active participation in a Faculty member's project with hands-on experience in phases of the project, like writing a proposal, design of the study, data collection, data analysis and reporting of results. The product of this experience would include a summary of the student's learning in the experience, a description of the student's contribution to the project, and a paper on a topic relevant to the project.
3. **Innovations in Practice**: These may include:
    a. **Research Utilization**: Development of an action plan for research utilization in targeted areas. This includes development of the associated clinical protocols/clinical practice guidelines and plans for implementation and evaluation.
    b. **Small needs assessment studies for program development**.
    c. **Educational Media**: Development of an instructional media project or web-based instruction and demonstration of the appropriateness of the product to a specific audience.
4. **Policy Development or Analysis:** This may include:
    a. **Organizational/ Institutional Studies**.
    b. **Policy Initiatives**: Development of a position paper which is research- based, aimed at changing a specific policy or policies. This must be aimed at a group of policy makers to effectively promote change.
5. **Other Options**: Any other project of interest to students that is related to significant clinical, theoretical, management or policy topics. All projects should demonstrate a research emphasis.

Any project that involves human subjects' research needs to be approved by the institutional review board (IRB) before data collection begins. See the IRB website for guidance on the process.

Procedure for Project Completion

First the project advisement team is approved by the Graduate Studies Committee at least 4 months before project defense. The adviser is a faculty member with the primary responsibility of overseeing the ongoing work of the project. The reader is not necessarily involved in continuous advisement but brings expertise. His/her role may vary in the amount of involvement.
Once initial approval is sought, the student submits a one page prospectus outlining the proposed project and gets approval of the advisement team from the Graduate Studies Committee. The student meets regularly with the adviser during the project work. A final

meeting is then scheduled with the advisement team to ensure successful completion of the project. Criteria for evaluation of projects in administration, adult care, and education are attached in appendix B. Projects are graded as Pass/Fail. Grading criteria for projects are shown in Appendix C.

- First registration (3 credit course) to be billed for 3 credits.
- Second registration (zero credits) to be billed for 0 credits.
- Registrations beyond the second time should be the exception for projects and, thus, will require Faculty Graduate Committee approval and students will register for the project (zero credits) and be billed for 1 credit.

Thesis

Thesis Proposal
Students prepare a proposal outlining the research plan. This proposal needs to be approved by the student's thesis chair and other review committees before proceeding to the data collecting stage. The thesis proposal plan needs to be approved by the Graduate Studies Committee at least 4 months prior to the thesis defense.

Thesis Committee
The Master's thesis committee should be composed of at least three members approved by the chairperson of the program. The thesis topic and Committee membership must be approved at least 4 months prior to the thesis defense date. It is advisable that the thesis committee includes one member from outside the Hariri School of Nursing, who may be from an institution outside AUB. All committee members should hold professorial rank. The thesis committee approves the thesis topic and research program and conducts the thesis defense.

Thesis Defense
The thesis defense is open to the public and must be carried out no later than the dates specified in the table below depending on the graduation semester.
'Pass' or 'fail' is reported for the thesis and defense. In case of failure, the students may resubmit the thesis and defend it after a period of at least three months. Failure the second time leads to discontinuation from graduate work.
Students must be registered for the thesis or at least one course in the semester or session during which they expect to graduate in order to present their defense.

Deposit of Thesis in the Library
After passing the thesis defense examination, the student is required to deposit two hard copies and one CD copy of the thesis at Jafet Memorial Library. A library receipt of these copies must be delivered to the Office of the Registrar before the student is awarded the degree. The student should sign a release form indicating whether or not the library is authorized to supply copies of the thesis to other libraries or to individuals. The non-authorization option is valid for a period of two years only, after which copies of the thesis will be supplied on request.

The dates for thesis procedure deadlines s per graduation dates are shown below:

For Master's candidates Graduating in	*Fall 2017-18*	*Spring 2017-18*
Deadline for approval of thesis topic and committee	*Wednesday, September 20, 2017*	*Friday, December 15, 2017*
Deadline for thesis defense	*Monday, February 05, 2018*	*Thursday, May 03, 2018*
Deadline for thesis deposit at library	*Monday, February 12, 2018*	*Monday, May 14, 2018*

Residence Requirements

To meet the minimum residence requirements for the master's degree, a student should register and be in residence as a graduate student for at least two semesters and two summers, or four summers.

Research

The faculty of the Hariri School of Nursing believes that research is a major component of the MSN program and is basic to the development of a scientific knowledge base for practice. Information on faculty research is available on the web and is updated on a regular basis with new faculty. Appendix D lists the graduate faculty research profiles.

The faculty of the Hariri School of Nursing at AUB believes that:

- Nursing research contributes to the advancement of knowledge development in general and to the body of nursing knowledge in particular.
- Nursing research is basic to effective nursing practice.
- Programs of research generate more in–depth knowledge in a focused area of research.
- A thesis could be generated from established programs of research. This improves the depth and quality of studies. It provides the student with unique opportunity of working with a circumscribed area of research under the mentorship of an expert faculty member.
- Possibilities also are made available for students to generate their own thesis topics under the supervision of available expertise. This encourages originality and applicability of research. Students are encouraged to choose topics of interest in close consultation with their adviser.

Publication rights based on thesis/project work

- Students publishing Thesis/Project Work, which is within established programs of research at the Hariri School of Nursing should do that in close consultation with their mentors. Agreement on authorship needs to be established in advance.
- It is customary that students writing articles based on original thesis work should be designated as first authors and faculty members mentoring their work as second and consecutive authors unless previously agreed otherwise.

AUB Policy on Graduate Assistantships

Assistantships covering tuition and partial living expenses are available for students at the graduate level in return for a specified number of hours of work per week (maximum of 20 hrs /week) for the Hariri School of Nursing. Assistantships are awarded on the basis of the academic record and departmental needs. Applications for new students are provided within the admissions application package. Refer to AUB's website http://www.aub.edu.lb. Continuing students may obtain applications from the Office of the Director of the School. Applications should be submitted early in the semester preceding the semester for which one is applying. For more information about Graduate Assistantship, consult the Director's Office and the Students Services Officer Mrs Lynn Berbary Najem, 4th floor, Hariri Hariri School of Nursing Building.

General Policies and Information

Non-Discrimination Policy

AUB encourages a diverse student body and workforce, and is committed to the principle of equal opportunity in education and employment. In the administration of its educational, admissions, and employment policies, and other university programs and activities, AUB does not discriminate on the basis of race, color, religion, age, national or ethnic identity, gender or gender identity, marital status, disability, genetic predisposition or carrier status, alienage or citizenship status, political affiliation, or any legally protected characteristic, except as required by Lebanese law. In addition, in compliance with Title IX of the US Education Amendments of 1972, which prohibits sex discrimination in education and interprets sex discrimination as including sexual harassment and sexual violence, the University maintains a Title IX coordinator in the Office of the Provost and may appoint deputy Title IX coordinators as needed. Inquiries and complaints regarding sex discrimination, sexual harassment, and sexual violence may be directed to the Title IX coordinator, College Hall, 5th Floor, Beirut, Lebanon, or by email at integrityofficer@aub.edu.lb. The Office of the Provost maintains a resource page on Non-Discrimination, Harassment, and Title IX at www.aub.edu.lb/titleix. AUB will provide reasonable accommodation consistent with the law to members of the AUB community with a disability. What constitutes a reasonable accommodation depends on the circumstances and, thus, will be addressed by AUB on a case-by-case basis.

Academic and Professional Integrity

Academic integrity and honesty are central components of student's education. Ethical conduct maintained in an academic context will be taken eventually into a student's professional career. Academic honesty is essential to a community of scholars searching for and learning to seek the truth. Anything less than total commitment to honesty undermines the efforts of the entire academic community. Both students and the faculty are responsible for insuring the academic integrity of the University.
Academic dishonesty, including but not limited to cheating and plagiarism, is deplored and not to be tolerated. Any act for cheating may be ground for probation, suspension and/or expulsion. Any act for plagiarism may be grounds for a failing grade on the paper and in the course. In addition, other sanctions may be imposed by the school for acts of academic dishonesty.

Students are expected to have high standards of integrity in both the clinical and academic settings. Integrity is a reflection of the respect that one holds for oneself and others. It is reflected by students' behavior in class and in the clinical practicum.
In the clinical settings, students are expected to protect patients' confidentiality, and to be honest in any documentation regarding the patient's condition and their own assessment and interventions. Students are expected to maintain high professional standards, including being physically, intellectually, emotionally and academically prepared when caring for patients.

Student Code of Conduct (http://pnp.aub.edu.lb/general/conductcode/index.html)

The purpose of this code is to provide students with a clear statement of the standards of behavior expected in an educational environment, so that they make responsible choices regarding their participation in the academic community and understand the consequences of their infringement of these standards. Violations may be of an academic or non-academic nature.
Jurisdiction of academic violations lies initially under the authority of the dean of the faculty or school to which the student belongs. Misconduct that is clearly non-academic falls under the jurisdiction of the dean of student affairs who will take the necessary action in consultation with the dean(s) of the faculty or school to which the student belongs.
The following are examples of actions deemed in violation of the Student Code of Conduct; they are not intended to define misconduct in exhaustive or exclusive terms. Any student who violates the principles described in the preamble to this document shall be subject to disciplinary action in accordance with the Student Code of Conduct.

Definitions of Misconduct

A. Academic Misconduct

Offences involving academic misconduct include, but are not limited to, the following:

1. **Cheating**[1]
   While taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work.
   Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

2. **Plagiarism**[2]
   Whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.
3. **In-Class Disruption**
   Students in class are expected to behave appropriately, and shall not disrupt classes or exams by extraneous conversation and/or misbehaving.

4. **Dishonesty**[3]

[1] Adapted from the Villanova Academic Integrity Code.
[2] Adapted from the Modern Language Association Style Manual and Guide to Scholarly Publishing, as found on Duke University's web page.

Students are expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
b. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.
d. Stealing or damaging library books.
e. Unlawfully copying computer software.
f. Engaging in bribery of any kind.

B. Non-Academic Misconduct

1. Disruption/Obstruction

Students have the right to express their opinions on matters of concern to the University in an organized manner and in a public space, excluding residences on campus, but they must notify and consult with the dean of student affairs before doing so. The nature of the event and any publicity accompanying it must be reviewed by the dean to assure that neither Lebanese law, nor university policies and norms are being violated.

In cases where student-sponsored events, including protests, sit-ins, and demonstrations are, after such consultation, not approved by the dean of student affairs, or, if needed by the Board of Deans or the president, it may become necessary for the dean of student affairs to undertake disciplinary measures and even to instruct campus protection to bring the public gathering to an end.

Disrupting or obstructing the normal educational process or any university function or activity by student demonstrations, sit-ins, or 'strikes' is strictly prohibited. This includes, but is not limited to: disrupting classes, library operations, seminars, exhibitions, meetings, ceremonial events, or examinations; impeding or preventing others from attending such events; falsely activating a disaster alarm; or making a threat.

Under no circumstances are any members of the university family to be intimidated or threatened in the execution of their normal duties and responsibilities. That means that students and faculty who wish to hold or attend classes or to go to their offices or places of study shall not be prevented from doing so; non-academic staff and administrators shall not be impeded from going to their places of work.

2. Distribution of Unauthorized Published Material

The public distribution and posting of published materials such as fliers, leaflets, posters, audiovisuals, etc., must be approved and stamped by the dean of student affairs. The campus protection office will remove from display any such unauthorized material.

3. Theft

---

[3] **Adapted from the Villanova University Academic Integrity Code.**

Stealing on campus or at a university-authorized event off campus, including unauthorized use of university equipment or services (e.g., telephones, photocopiers, or computer facilities), or possession of stolen property, is prohibited.

4. Destruction of Property/Endangering Public Safety

Students are expected to protect university property and to respect the safety of others. Acts contrary to these principles, which include, but are not restricted to, the following, are subject to disciplinary procedure:

a. Engaging in vandalism or other intentional damage (such as spray painting or graffiti) to property on campus or at university-authorized events off campus.

b. Littering, such as disposing of waste (empty bottles, cigarette butts, food containers, etc.) in other than designated places on campus.

c. Unjustified discharge, damaging, or tampering with any fire extinguisher, fire alarm, or other safety devices.

d. Taking, or attempting to take, action that damages or could damage private property, without the consent of the owner or person legally responsible.

e. Appropriating, or attempting to appropriate or possess, private property, without the consent of the owner or person legally responsible.

f. Unauthorized entry, unapproved duplication of keys or use of such, or unauthorized use of campus facilities.

5. Mental or Physical Harm

Acts that inflict mental or physical harm are prohibited, including the following:

a. Engaging in physical aggression including, but not limited to, assault.

b. Engaging, or attempting to engage, in intimidation, coercion, extortion, blackmail, or bribery; bullying; threatening violence, injury, or harm to others on campus or at university-authorized events off campus; endangering or tending to endanger the safety, health, or life of any person.

c. Engaging in behavior that creates a substantial risk of, or results in, injury to others, such as committing arson or causing a riot.

d. Using force, inciting violence, inflicting or attempting to inflict injury to others on campus or at a university-authorized event off campus.

e. Engaging in any activity that endangers the health and safety of an individual or demeans an individual in conduct of an unbecoming or humiliating nature, or in any way that detracts from an individual's academic pursuits.

6. Possession of Dangerous Weapons or Materials

Students must not distribute, possess, store, or use, on campus or at a university-authorized event off campus, any kind of weapon, device, explosive, dangerous chemicals, hazardous materials, or any other instrument designed to do bodily harm or to threaten bodily harm.

Instruments used to simulate such weapons, which endanger or tend to endanger any person, shall be considered weapons.

Students are also prohibited from distributing, possessing, storing, transferring, selling or attempting to sell, delivering, using or attempting to use, any illegal drugs, narcotic or hallucinogenic, on campus or at any university-authorized event off campus.

7. Discrimination and Harassment

Students are not allowed to discriminate on the basis of race, gender, age, religion, national origin, ethnic origin, marital status, mental or physical disability. Nor shall they harass, intimidate, insult, or threaten others whether verbally, in writing, or through electronic means.

Engaging in sexual harassment, e.g., requests for sexual favors, unwelcome sexual advances, unwelcome physical contact of a sexual nature, spoken comments or abuse (including email) of a sexual nature, and the public display of sexually suggestive objects or pictures is prohibited (refer to the University Policy Against Discrimination and Harassment).

8. Smoking and Alcohol

The consumption of alcohol, on campus, by students is not permitted. Smoking is not permitted in university buildings other than private residences and those areas within the student dormitories, as may be designated from time to time by the dean of student affairs (refer to the University Policy on Smoking). Students must abide by the following:

- Smoking is not permitted in any University building, including the Medical Center, except for private residences and student dormitory rooms, as may be designated by the Dean of Student Affairs. Smoking is prohibited in all dormitory common rooms, corridors, lavatories, and other public spaces. Smoking is prohibited in all university vehicles.
- Persons smoking in outside open areas, or in private residences, or in designated dormitory rooms where smoking is permitted, are required to ensure that smoking materials are disposed of in a tidy and safe manner. On no account are cigarette butts to be disposed of on the ground or thrown into the wooded or landscaped areas.
- All persons on AUB property are expected to respect this Smoking Policy. Breaches of the Policy should be reported to the Environmental Health and Safety Center, extension 2360. Persons who are found to have breached the Policy will be subject to disciplinary actions.

9. Inappropriate Sexual Behavior

Publicly engaging in sexual behavior is prohibited as deemed by Lebanese law.

10. Use of Computers

Accessing protected computer accounts or other computer functions, knowingly transmitting computer viruses, and unethical use of AUB access is prohibited (refer to the University Policy on the Use of Computers).

Jurisdiction over Violations

AUB holds all students responsible for actions occurring on campus and at the AUB Farm, the AUB medical center, and university-authorized events.
Students attending an off-campus function as representatives of the University (such as, but not limited to, students serving on academic or athletic teams or engaging in club activities) are subject to disciplinary sanctions for violations of this code.

Disciplinary Actions

Disciplinary action will be imposed according to the nature (academic or non-academic) and severity level of the violation.

A. Academic Misconduct

In principle, enforcement of disciplinary actions for academic violations is carried out by those immediately responsible.

It is the responsibility of the faculty to uphold university policies. Thus, the immediate responsibility for dealing with instances of cheating, plagiarism, and other academic violations rests with the faculty member. If a faculty member has good reason to believe that a student has violated academic standards, it is his or her responsibility to discipline the student expeditiously.

A faculty member who has good reason to believe that a student has violated academic standards must give a grade of zero on the exam or assignment where the violation occurred.

When the instructor has taken disciplinary action, he or she should send a letter to the Student Affairs Committee in the faculty or school in which the student is enrolled, informing that committee of the incident and the action taken. A copy of the letter will be placed in the student's file, as well as forwarded to the student's adviser for follow-up.

B. Non-Academic Misconduct

Violations of a non-academic nature are the responsibility of the dean of student affairs, in consultation with the dean of the faculty or school in which the student is enrolled and, as necessary, the chief of campus protection. Students should know that the laws of the Republic of Lebanon apply on campus, and those who violate these laws may be subject to criminal prosecution.

C. List of Primary Disciplinary Actions

Documentation of disciplinary actions, other than suspension and expulsion, will not become part of the student's permanent record. Records of the University Disciplinary Committee decisions, including charges and sanctions, will be maintained as part of the confidential records in the office of the respective dean, for a period of up to four years after the student graduates or ceases to be a student.

Range of Actions:
Informal Warning

This may be oral or written. It is a statement that the student has inadvertently violated a university regulation. The warning will be recorded in the respective dean's records and the student will be documented.

Examples: *Littering and smoking in prohibited areas.*

Reprimand

This will be in writing. It is a statement that the student has violated a university regulation. It is intended to communicate most strongly, both the disapproval and the reprimand of the university community. The reprimand will be kept in the respective dean's records.

Examples: *Inadvertent plagiarism - failure to cite sources appropriately, and*

inappropriate physical contact.

Dean's Warning
This will be in writing. Only two Dean's Warnings are allowed in a student's academic career at AUB. It is recommended that any violation of university regulations after the second Dean's Warning results in consideration of suspension. Such a warning is kept in the file of the student and the respective dean's records.
Examples: *Plagiarism, academic dishonesty, disruption-obstruction, mental or physical harm, discrimination and harassment.*

Suspension
This will be in writing and will form part of the student's permanent record. A student will be suspended for a fixed period of time during which the student may not participate in any academic or other activities at the University. At the end of the suspension period, the student may be readmitted to the University, only upon the recommendation of the University Disciplinary Committee.
Examples: *Cheating, theft, and destruction of property.*

Expulsion
This will be in writing and will form part of the student's permanent record. Expulsion denies the student the right to participate in any academic or other activities of the University for an indefinite time. Only under the most unusual circumstances, and upon the recommendation of the University Disciplinary Committee, will an expelled student be readmitted to the University.
Examples: *Academic dishonesty, possession of dangerous weapons or materials, and endangering public safety.*
N.B. Any person who maliciously lies to cover up an act sanctioned by the code of conduct will be considered to be an accessory after the fact and may be subject to disciplinary action.

D. Required Withdrawal from Campus Pending Hearing
In extraordinary circumstances, when the student's continued presence is deemed a danger to the university community, the student will be required to withdraw from the campus, pending a meeting of the University Disciplinary Committee. This action shall normally require the approval of the president of the University.

E. Secondary Disciplinary Actions
In addition to the disciplinary actions listed above, the following secondary disciplinary actions may be imposed upon those who violate the Student Code of Conduct. Secondary disciplinary actions may be of an academic or non-academic nature.

Secondary Disciplinary Actions – Academic

- The student may be prohibited from participating in the work study program.
- The student may be prohibited from receiving any form of financial aid, scholarship, or monetary award.
- The student may be prohibited from receiving any form of honor, merit award, or other academic recognition award.
- The student may be prohibited from holding a graduate assistantship.
- The student may be given a failing grade in a course or a test or any other

form of academic assessment.

Secondary Disciplinary Actions – Non-Academic

- The student may be prohibited from representing AUB in any official role, activity, or event.

- The student may be prohibited from serving as an officer of any AUB organization including club, team, or society.
- The student may be prohibited from living in any AUB hall of residence or similar facility.
- The student may be strongly advised to attend treatment or counseling as determined by the director of the counseling center, in consultation with the dean of student affairs.
- The student may be required to make financial restitution.
- The student's case may be referred to an external agency for further action (this could include the filing of criminal charges).

Complaint Procedure

Any person subject to, or who witnesses, a violation of the Student Code of Conduct should forward a written complaint to a faculty member, a chairperson, or any university official. Academic violations shall be forwarded to the dean of the faculty to which the student accused of the violation belongs. Non-academic violations shall be referred to the dean of student affairs. Violations that may require suspension or expulsion will be referred by the concerned dean to the University Disciplinary Committee.

Formal Hearing by the University Disciplinary Committee

The University Disciplinary Committee will deal with alleged violations in a manner that ensures that those charged with a violation understand the charge and the evidence against them and are afforded a reasonable right of rebuttal.
The University Disciplinary Committee shall inform the student of the charge in writing.
Evidence shall be presented in the presence of the student who shall have a reasonable right of rebuttal including the right to cross-examine witnesses. In determining penalties, the committee may take into consideration the student's cumulative discipline record.

Appeal Procedure
Any student who is charged with a disciplinary offense has the right to a full and fair hearing for any disciplinary charges brought against him or her under university regulations.
If any of the following apply, a student may appeal to the dean of the faculty or school regarding faculty or departmental decisions, or to the University Disciplinary Committee against disciplinary action taken by the dean of student affairs or the dean of the faculty or school to which the student belongs:

1. Procedural error
2. New evidence
3. Unsupported conclusion
4. Disproportionate sanctions

The outcome of this appeal may result in higher, lower, identical, or no sanctions at all being imposed. The University Disciplinary Committee's decision shall be final.

Other Policies

Student Representation on Faculty Committees
Student representation on the Hariri Hariri School of Nursing Committee is encouraged. Students can request that items be put on any Hariri School of Nursing Committee agenda regarding graduate students. At the discretion of the Graduate Program convener or the Director of the Hariri School of Nursing, this request may be granted.

Facility and Supervision Guidelines for Graduate Student Practice
The Faculty and students will discuss qualifications for clinical facilities and preceptors. Any student may seek new learning experiences in facilities that are not currently used by the Hariri School of Nursing. In order to accomplish the negotiations that are normally done when a graduate student requests placement at a new clinical facility, placement is expected to begin (at least 8 weeks ahead of lead time is preferred). Student selection of clinical facilities and /or preceptors is under the supervision of the Graduate Faculty.

Students with Disabilities
Students with disabilities applying to AUB are strongly encouraged to make their disability known to the Admission Office. This information will not affect the decision on admission; rather, it will give the University the opportunity to offer specific assistance and support through programs and services provided by different departments on campus. Therefore any student who had a disability that might prevent him/her from fully demonstrating his/her abilities should meet with an adviser as soon as possible to initiate disability verification and discuss accommodations that may be necessary to ensure full participation in the successful completion of requirements for graduation.
As old buildings are renovated and new ones built, wheelchair access ramps are being constructed. Some parking lots have been assigned and dedicated for special persons and they are located on different AUB sites. These areas are labeled for "Special Permit" holders. A room for the Visually Impaired is located in the West Hall.

Students Rights and Responsibilities

Students are members of the academic community and are also citizens. Students enjoy the same freedom of speech, peaceful assembly and right to petition. Students have the responsibility to know and obey the Lebanese Laws & that of the University. It is the responsibility of the student to know institutional regulations, policies and established guidelines as stated in this handbook. Students are accountable for their own behavior at all times. Students have the right to freedom from discrimination on the basis of race, color, religion, sex, and age. Students have the right to be informed, in writing, of the expected behaviors and standards by which they will be evaluated prior to participating in clinical classrooms activities. Students have the right to academic evaluations which are not prejudiced and which are based on stated course requirements. As constituents of the academic community, students are free, individually or collectively, to voice constructive criticism through identified channels on issues such as curriculum, and matters of general interest to the student body without fear of reprisal.

While under the direct supervision of an instructor, students also have the right to adequate safety precautions provided by the Hariri School of Nursing. Students also have the right to

negotiate participation in clinical situations which they feel are threatening to their personal health or life. Students, individually or collectively, have the right to expect, within a reasonable length of time, feedback concerning all student related issues presented to the faculty.

Freedom in Classroom
Students are responsible for learning the content of the courses in which they enroll, though they should be free to take reasoned exception to the data or views offered in any course of study, and reserve judgment about matters of opinion.
Students are responsible for complying with standards of academic performance required by each course in which they are enrolled. Such standards shall be communicated clearly in writing on or before the first meeting of each course. Students should have protection against prejudiced, arbitrary, and capricious academic evaluation.
Knowledge of student's views, beliefs and political associations acquired by the faculty members in the course of their work as instructors, advisers, and counselors are to be considered confidential.

Freedom of Inquiry and Expression
Students are free to examine and discuss questions and issues of interest to them, to express their opinions whether in public or in private. Such freedom does not, however, permit student groups to disrupt the orderly processes of the educational environment, nor does it permit the expression of ideas in ways which violate civil or criminal law, blatantly disregard the truth, threaten, demean, or libel others. In expressing their views, students should make clear that such views are not necessarily those of the University.

Getting in Touch with the Right People at the Rafic Hariri School of Nursing

Students are encouraged to communicate any concerns they might have to the appropriate persons. They can refer to the Student Services Officer for the following issues:

- Answering queries about the BSN and MSN programs
- Student orientation and advising
- Follow up on different awards and scholarships available to nursing students
- Problems in registration (opening capacity, removing restrictions, resolving time conflict problems, removing holds, selection of elective courses, drop and add courses)
- Dealing with the administrative body (Registrar's office, Office of Financial Aid, Office of Student Affairs and specific committees at HSON)
- Writing and submitting petition letters (underload/overload credits, late registration, medical reports, course withdrawal, reactivation and readmission etc.)
- Selection of specific academic forms for internal and external procedures
- Program evaluation and satisfaction surveys
- Career guidance and work opportunities
- Student related activities such as student elections, NSS activities and graduation parties etc.
- Requesting credentials after graduation.

The Student services office seeks to assist and guide nursing students to develop their plan to academic success, by referring them to the appropriate resources and procedures, and ensuring that they are complying with AUB academic rules and regulations.

Issues related to a particular course are best discussed with the course coordinator. Problems with a student's academic progress should be followed up with the assigned adviser. Students may discuss issues related to a particular class with their advisers. If the student cannot resolve

problems with the course coordinator or adviser, he/she should talk to the track coordinator, and then the MSN convener. If necessary, issues are referred to the Director of the School.

University Services

University Libraries

The AUB library system consists of two main libraries: the University Libraries and Saab Memorial Medical Library.
The University Libraries include the Jafet memorial Library as the Central Library, with two branch libraries: the Engineering and Architecture Library, and the Science and Agriculture Library with its annex AREC (Farm) Library.

The University Libraries have over 558,932 volumes, with 2,708 subscriptions to periodicals, of which about 238 are in Arabic. There are also nearly 1,051,794 audiovisuals items of all kinds. The Archives and Special Collection include 435 linear feet of archives, 1,392 manuscripts, 11,139 volumes of theses projects and dissertation, 24,477 photographs, 3, 870 posters and 1,462 maps. The University Libraries are currently open 90 hours per week. All Libraries have photocopying machines available for student use. A card containing 100 photocopying units may be bought for LL5, 000 in vending machines located in each Library. Photocopying is also offered at the University Book store for a small fee.

The Saab Memorial Medical Library (SML) is dedicated to the Memory of Dr. Nicholas Saab (AUB School of Medicine graduate 1959) through a generous gift from his parents.
SML has been functioning in its present quarters as part of the Medical Center since 1975, and qualifies as one of the best medical libraries in the Middles East. The collection consists of 1,200 printed periodical subscriptions , over 82,320 backfile periodical volumes, nearly 42,000 books , over 2,000 of which are of historical value such as (Avicenna's "Cannon of Medicine," 1593, which has been digitized and published on the Web under http://ddc.aub.edu.lb/projects/saab/avicenna/index.html, and nearly 2300 audio-visual items, including computer software. SML now acts as a hybrid library that is constantly increasing its e-resources while maintaining its traditional services. It has a large number of the most important bibliographic medical and allied health data bases, and more than 2,500 e- journals. SML has been automated since 1990 and is accessible through the internet at http://www.aub.edu.lb/libraries/medical. In 1978, SML was designated by WHO as the National Focal Point of Lebanon. The Library has a special collection called the Lebanese Corner, http://192.168.100.187/, which includes publications about Lebanon or by Lebanese authors in the fields of medicine and other health related topics. SML services are provided mainly to AUB clientele, but also to all other medical and allied health users throughout Lebanon. With its rich, up-to-date medical collection, SML aims to promote research in the medical and allied health fields. SML is open 80 hours a week. Databases are currently accessible via library or home search via AUBs' website.

Office of Information Technology

The office of information technology (OIT) manages AUB and AUB Medical center's central information technology. The OIT manages the Student Information System (AUBsis) operated by the Registrar's; the Library Information System, Financial Information System; the Learning Management System (Moodle); and the integrated hospital information system operated by the

hospital administration and departments. You can view the services provided by the IT organization by visiting: www.aub.edu.lb/it/.
Before using any of the services below, you must activate that specific computer accounts first.
AUBnet account: The AUB net account provides e-mail, intranet, and Internet access in addition to other services such as roaming storage space, network printing, and personal web site space. Students must activate their AUB net account first as it is required to activate other accounts.

AUBsis account: The AUB sis account provides access to the AUB student Information System, a web-based application designed to provide the following on-line self services to students and faculty over the intranet and the Internet: On-line Registration, Drop and Add, Class Schedules, Grades, Student Transcripts, Address Information, and Billing Statements.

NETg account: The NETg account provides 100+ computer-based training (CBT) courses available within AUB intranet. NETg's engaging and interactive, stimulation-based content will increase your performance by ensuring that you learn exactly what you need, when you need it. Current offerings include computer related courses such as, Internet, HTML, Java and JavaScript courses, Microsoft Office and Developer suites, Cisco, Novell, and Lotus Notes among others.

Student computer labs, located in Agriculture, Bliss, Business, Engineering (Wing B), Fisk, Physics, Van Dyck, Diana Tamari Sabbagh buildings, as well as all Libraries and dorms are used for instruction by the various departments and for personal use by the students. Many popular and PC software packages are available on the lab servers.
An Internet fee of LL60, 000 is charged every semester and will automatically be added to the statement of fees. The quota of Internet data per month per student is 100MB. This is a combined quota of web and e-mail data. Through the AUB Net Resources web site you can find out your Internet data usage for the month.
No limit exists on the time spent browsing and sending information on the web. The limit is only on the volume of data that is sent/ received in the process.

Access to AUB Computing Facilities

Access to computer hardware, software, intranet, and the Internet services is provided to members of the University for the primary purpose of enhancing the academic experience. Access to the use of AUB computer facilities is through authorized computer accounts. To be granted the use of a computer account, users must agree to abide by the AUBnet Code of Conduct for Users of Computing System and Internet Services.
A computer account consists of a unique log-in ID and a password. You identify yourself to the computer system when you log in. Your log-in ID tells the computer who you are. Like the PIN on your bank ATM card, your password is the key to your account. You must always keep your password secret.
To activate your AUB computing accounts go to http://www.aub.edu.lb/it/services/students/Pages/index.aspx then click on account creation and management and follow instructions..

Graduate Student E-mail Address

The University makes extensive use of electronic mail for communication and to keep in touch with students. To ensure that students receive timely communication and important announcements, the student's current email address must always be on file in the Hariri School

of Nursing. Every graduate student is provided with an AUB Computer Account, which includes e-mail. It is strongly recommended that all graduate students use their AUB e-mail address as their primary one for the duration of the time they are studying here. This will help to prevent students missing announcements or other important communication from faculty and staff.

Bookstore

The University Bookstore is located at the back of Bliss Hall across from Penrose Hall. It stocks most of the required textbooks for specific courses, dictionaries, and other reference works, and a limited number of general publications. Assorted AUB items and gifts such as clocks, mugs, diploma, and picture frames, T-shirts, and binders are also on sale.

The Writing Center

For students who need assistance in writing papers or projects, the AUB writing center located in West Hall Room 307 provides assistance. Tutors from the Department of English are available Monday through Friday 9 am – 3 pm and consulting services are free. The extension to call for taking appointments is 3157.

University Health Services

Medical Records

An entrance medical record form will be sent to all admitted students who have made the commitment to enroll at AUB. It is to be completed by the student's family physician and mailed as soon as possible and before the period of registration in a pre-addressed envelope AUB provides. Alternatively the completed medical record form may be delivered by hand to the Office of Admissions.
All new students must have a tuberculin test at the time of the preliminary medical check, held during registration, and must report 48 hours later for the check on the test. Upon clearing the medical test, the student will be issued a clearance slip to proceed with registration. Students will not be registered unless they obtain this clearance slip. Students who report late for the medical check will be charged a late fee.
Medical checkups may be completed in advance of registration, provided that the student reports to the University Health Services on Campus and brings along a letter of acceptance and the entrance medical record.
Returning students are not required to complete any medical forms. Important changes in the student's medical condition and/or updating immunizations should be reported to a University Physician by appointment at the Health Services Center early in the first semester. Information will be kept confidential.

Health Insurance Plan (HIP)

The University Health Services (UHS) on campus provide medical care to members of the university community at large. Patients are seen Monday through Friday 8 am to noon and 1 to 4 pm in the Gulbenkian Infirmary located in the Sawwaf Building facing the Children Cancer Center in Lebanon. Appointments can be made at the reception desk in advance, either in person or by telephone between 8:30 and 4 pm. A physician is also available to receive patients on a walk-in basis. Such patients must have problems of an urgent nature; otherwise, they will be given return appointments for a later time. In case of emergency, the patient should report

directly to the Emergency Unit at the Medical Center or to the nearest Emergency service or Physician.
Students may elect to enroll in the University's Health Insurance Plan (HIP, provided they register for at least six credit hours. Auditors are not considered students. A graduate student registered for a thesis is eligible to continue the HIP coverage for two consecutive years only.
Regular students enrolling For twelve months beginning with October registration , pay 514,000 L.L. .
For one semester and summer session beginning with February registration , pay 386.000 L.L.
Students enrolled in the Spring Semester are covered through the summer until September 30, provided they do not leave the University or drop all their courses. A married student will have the option of including spouse and children at additional fees as outlined in the regulations for the Health Insurance Plan. A student may be exempt from enrolling in the HIP if he/she presents proof of coverage by another health insurance plan.
HIP covers expenses incurred at AUB Medical Center exclusively. Medical bills from other institutions are not covered.
NSSF fee per student per year is 202.500 L.L.
National Social Security Fund (NSSF) Medical Branch

Membership in the NSSF is mandatory by Law for all Lebanese students excluding freshman and special students, and students who are older than 30 years. Non-Lebanese students may not join. To facilitate enrollment in the NSSF Medical Branch, students are required to bring the following items when registering:

- A social security application form filled correctly. Copies of this form will be available for distribution at the time of registration to students who have not completed it.
- A photocopy of their Lebanese Identity Card.
- Their NSSF number if already registered.
- The NSSF number of either parent if insured with the NSSF through father or mother.
- Family record is required of married students only.

Extra-Curricular Services

Nursing Student Society

The Nursing Student Society (NSS) brings together nursing students from all levels to engage in various professional and social activities, under the guidance of an assigned faculty advisor. Objectives of the NSS are to:

- Serve as an organization through which matters related to the welfare of students and the school is transacted.
- Provide a channel for coordination of activities between the students and faculty members, and with other student organizations.
- Organize activities that promote a spirit of loyalty and fellowship among the student body.
- Provide means for active participation in activities that foster the personal, professional and civic development of students.

The NSS has three standing committees:

1. The Educational Committee organizes educational programs of interest to the community.
2. The Social Committee is responsible for social and recreational activities.
3. The Publicity and Finance Committee is responsible for publicity and financial matters.

Clubs and Societies

Opportunities for students to participate in extra-curricular activities, generally organized under the auspices of student-governed societies or clubs are numerous. Membership is open to all registered students upon completion of an application and payment of a nominal fee. For further information or to obtain a list of active Clubs and Societies, go to the Department of Student Activities in the West Hall, extension 3182, or AUB Catalogue.

Athletics and Recreation

The University offers a wide range of sports, athletic and recreational programs through its Athletics Department. Facilities include AUB's Green Field, which hosts international, national, and varsity sports tournament. The Green Field includes the University's soccer field, light outdoor basketball courts, lighted outdoor volleyball courts and a lighted 450-meter track, in addition to the Charles W. Hostler center.

Student Housing

AUB is a residential University in the American liberal arts tradition. It was the first and still is one of the few residential universities in the Middle East offering a beautiful Campus where a rich extra-curricular and community life flourishes. Life in the AUB residence system offers a high degree of reliability. Dorm life in AUB establishes strong, supportive communities. For extra details, check AUB catalog.

Student Transportation

AUB allows limited automobile access to campus. Only students suffering from illness or disabilities may bring cars on campus. Authorization from Infirmary must be received before a permit can be issued, and then the student can contact Business Services at extension 3510 for a special permit.

Passports and Visas

Foreign students joining AUB must have passports valid for a period of not less than 13 months from the date of joining the University. They should also secure an entry visa to Lebanon from the nearest Lebanese Embassy or Consulate in their country. The Office of Students Affairs, in coordination with Personnel, the Office of Admissions, and the Office of Registrar, will help provide the necessary certificates for registered foreign students to acquire residence permits from the Lebanese authorities.

Mail Service

The University Post Office, located in the basement of Ada Dodge Hall, handles local campus mail and mail for the Lebanese postal services. To secure a campus mailbox a student must show a receipt of fee payment at the AUB Post Office.
Urgent mail may be sent by Aramex through the AUB Post Office. A special rate is offered to the AUB community. Also DHL offers special rates at the AUB Bookstore.

Food Service

The University operates a modern, cafeteria-style food service on the Campus in Ada Dodge Hall. Students have the option of using these food service facilities or eating elsewhere. In

addition to the main cafeteria the University also maintains the Mary Dodge Hall Cafeteria, the Engineering Cafeteria, and the Agriculture Kiosk. These facilities provide a variety of hot and cold refreshments for students and their guests. Vending machines are available in a number of University buildings and at the beach tunnel. You can also ty the Coffee Shop on the first floor of AUBMC, the hospital cafeteria or Lavazza café on the hospital's second floor.

APPENDIX B

GUIDELINES FOR THE MSN COMPREHENSIVE EXAM

A. To complete requirements for the Master of Science in Nursing, students must pass a comprehensive examination. To be eligible to take the examination, the student should have:
    a. Completed all core courses and most specialty courses.
    b. Be in good graduate standing.
    c. Met with his/her adviser to determine eligibility.

B. The comprehensive examination process:

    a. The examination will be taken after most of the course work is finished. Students are advised to take the comprehensive examination as early as possible, before beginning their thesis or project.

    b. There will be three examination questions which will be based on content from the MSN core courses (Foundations of Advanced Practice; Nursing Research); and the Area of Specialty.

    c. Two faculty members will read and grade each question blindly.

    d. A final grade of Pass is required to pass the exam. The grade of Pass will be given if the student passes all three questions.

    e. Criteria for grading will be based on knowledge of content, as well as evidence of critical and analytical thinking. The desired learning outcome is the synthesis and application of knowledge of advanced nursing practice.

    f. Students who receive PR (i.e. Unsatisfactory) on the examination may take it a second time after a period of at least three months.

Faculty List

Research and Publications

Faculty List

Huda Abu-Saad Huijer RN, PhD, FEANS, FAAN
Professor of Nursing Science & Director Hariri School of Nursing
Extension 5952/3
E-mail: Huda.Huijer@aub.edu.lb

Research Focus & Areas of Interest:

- Research expertise: pain management and palliative care across the life span.
- Research Interest: effectiveness of expanded role of the nurse.

Ongoing Research

Principal Investigator: Huda Abu-Saad Huijer
Palliative Care in Older Adults in Lebanon
The purpose of this study is to evaluate the quality of palliative care (PC), the quality of life (QoL), symptom management, and functional ability among hospitalized older adults in need of palliative care in Lebanon.
The study will follow the observational survey design. Data will be collected from three hospitals: AUBMC, St. George, and Ain Wazein. Face to face interviews will be carried out using the Quality of Palliative Care Questionnaire-Adult (QPCQ-A) assembled using several instruments measuring quality of life, symptom prevalence and management, quality of care, and functional ability.
Coinvestigators: **Marina Adra, Hala Darwish, Souha Fares**, Hussam Ghusn, Ramzi Hajjar, George Karam, **Samar Noureddine**
Funding: CNRS
Status: Data Collection

Principal Investigator: Huda Abu-Saad Huijer
Chronic Pain: The Development and Psychometric Validation of an Arabic-Language Version of the Pain Catastrophizing Scale (PCS-A)
Chronic pain is believed to be a disease on its own and has been increasing in prevalence. While reporting or anticipating pain, patients experience a negative “mental set” of catastrophizing that has been described as an exaggerated cognitive-affective response to actual or anticipated pain. The 13-item Pain Catastrophizing Scale (PCS) is the most widely used measure of pain-specific catastrophizing and assesses three dimensions: rumination, magnification, and helplessness. The PCS has been translated and validated in several languages though no Arabic version exists that measures an important predictor of pain and pain-related outcomes. Thus, the purpose of the project is to develop and psychometrically evaluate PCS in the Arabic language among a sample of 150 adults in Lebanon.
Coinvestigator: Dr. Douglas French, Professor of Psychology, University of Moncton, Canada
Funding: Pfizer
Status: Ongoing

Completed Research

1. Title: Palliative Care in Lebanon; Needs Assessment for Palliative Care Services for Adults and Children.
   Role: PI

Funding: American University of Beirut, Lebanon, 2005-2008, MPP and URB Funding.

Research Focus and Areas of Interest

My research focus is action research, i.e. community- based (interventional) studies that address current and salient problems and issues in the community. My research interests and publications have evolved from working with women and adolescents to including patients with chronic conditions, such as diabetes and CAD. The common thread which links my research projects is the emphasis on health education and prevention. If one examines my research involvement, it would appear to be multi-faceted.

Current Research

1. **Arevian M.,** Kabakian T. Perception of Health Related Quality of Life and Adherence to therapeutic Regimen in Type 2 Diabetic Patients. (In progress).
2. Doumit M., Fares R., **Arevian M.** Knowledge, Attitudes and Practice of Lebanese Women Towards BSE, CBE, and Mammography. (In progress).

Publications

2014 **Arevian M**., Kabakian, Khasholian T. Impact of a peer-led educational program on knowledge and attitudes about prevention of substance abuse among Lebanese/Armenian adolescents: A pilot study. *Journal of Community Medicine and Health Education, 4*(5), 1-6.

2011 **Arevian, M.,** Noureddine, S., Abboud S (2011). Beliefs Related to Breast Cancer and Breast Cancer Screening among Lebanese Armenian Women. *Health Care for Women International, 32*, 972 - 989. DOI: 10.1080/07399332.2011.580405**.**

Michael Clinton RN, PhD, MSc, BA(Hons)
Professor in Nursing Science, Rafic Hariri School of Nursing, American University of Beirut; former Professor and Dean, Faculty of Nursing, University of Calgary, Alberta.
HSON Room # 523
Extension:5956
E-mail: mc42@aub.edu.lb

Research Focus & Areas of Interest:

- Conceptualization and measurement of nursing and health phenomena
- Research expertise 'qualitative research methodologies, especially phenomenology, grounded theory, and Foucauldian discourse analysis; quantitative expertise Rasch analysis and applications of item response theory.
- Research interests 'empirical ethics, philosophy and ethics of mental health, national health policy, health services research, nurse education'

Current Research

Clinton, M., From Education to Practice: The Challenges that Nursing Students and Novice Nurses Face in Lebanon

Clinton, M., Comparison of organizational research climates in universities in Lebanon, Canada and Australia: An initial study

Clinton, M., Doumit, M., Ezeneddine, S, Lebanese students' perceptions of undergraduate preparation for transition to the role of the registered nurse (In progress)

1. Clinton, M. Younan, L., Fares, S. Rasch analysis of the Actual Scope of Nursing Practice Survey (In Progress)
2. Clinton, M., Springer, R.A. Conceptions of genealogy in Foucault and Agamben (In progress)

Completed Research Projects:

1. Creating an Interprofessional Learning Environment through Communities of Practice
   Jointly with Calgary Health Region, University of Alberta, Southern Alberta Institute of Technology, Bow Valley College, Mount Royal College
   Health Canada – Interprofessional Education for Collaborative Patient Centred Care Program
   $1,295,519

2. Grant to establish the T.G. Smith Dementia Services Research and Development Unit in the Freemasons' Centre for Research into Aged Care Services.
   Jointly with R. Marquis, D. Boldy and B. Horner
   Fremasons of Western Australia - $400,000.

3. Evaluation of the Western Australian after-hours Primary Medical Care TrialJointly with I. Rouse. L. Adams. D. Boldy, R.Donovan. A. Mylvaganam
   Health Department of Western Australia - $232,000

4. Development, implementation and evaluation of a shared care model for the continuing treatment of heamatology cancer patients.
   Jointly with A. Thomas. B. O'Connell, H. Myers, G. Russell, M. Surveyor, D. Joske
   General Practice Innovation Fund, Western Australian Department of Health and Aged Care - $70,000.

5. Jointly with Professor Ken Sellick, B. Mirolo, Patsy Yates.
   ARC Collaborative Research Grant Proposal - $143,406

6. Development and evaluation of a professional development program to improve the practice of mental health nursing in rural and remote communities.
   Jointly with Professor Gail Hart and Derek Weir.

   RHSET Grant - $60,060

7. Mental health nursing interventions: Evaluation of a collaborative education program for people with schizophrenia and senior undergraduate students of nursing.
   Jointly with Sioban Nelson, Helen Edwards, Professor Gail Hart and Jennie Barr
   Commonwealth Health & Human Services Research & Development Grants - $89,426 1995-1998)

8. Strategies to promote graduate transition and lifelong learning for nurses.
   Jointly with Professor Gail Hart, Robyn Nash, Diane Collins, Deanne Gaskill, Marilyn Harris, Dr Barbara Tooth and Patsy Yates
   National Teaching Development Grant, Committee for the Advancement of University Teaching, DEET - $34,323

Hala Darwish, RN, MSCN, MSCS, MS, PhD
Associate Professor
Managing Director Abou Haidar Neuroscience Institute and the
Nehme and Therese Tohme Multiple Sclerosis Center.
Acute Care and Neuroscience Nursing
Room 514
Extension: 5938/7427
E-mail: hd30@aub.edu.lb

Dr. Hala Darwish is an associate professor at American University of Beirut, Hariri School of Nursing; her research area focuses on biological and environmental factors that modulate the cognitive function in adults. She has examined the biological and learning and memory changes that follow traumatic brain injury, ageing, and multiple sclerosis. She has experience in basic science and clinical research. She explored the effect of vitamin D deficiency and supplementation on cognitive function in older adults and in multiple sclerosis, and identified norms of widely used cognitive assessment measures for the Lebanese population. She has presented scientific papers in national, regional & international conferences.

Research: Traumatic Brain Injury, Multiple Sclerosis, Dementia and Ageing

Research Focus: Cognitive performance: learning and memory

Ongoing Research

Principal Investigator: Hala Darwish
Brief International cognitive assessment for MS (BICAMS)-Arabic
The aim of this study is to validate the well-established Brief International Cognitive Assessment for Multiple Sclerosis (BICAMS) in Arabic
The test stimuli and administration procedures will be standardized in Arabic. The validity and the test-retest reliability of the different tests will be assessed. Finally, we will establish the normative data for Lebanon
Co PIs: Samia Khoury and Bassem Yamout

Principal Investigator: Hala Darwish
Environmental enrichment affects spontaneous object recognition, temporal order memory, and epigenetic events post mild traumatic brain
Funding: MPP
Co-PI: Elie D. Al-Chaer

Principal Investigator: Hani Tamim
Assessment of Traumatic Brain Injury in Lebanon: A Retrospective Cohort Study
Co PIs: Hala Darwish, Firas Koubeissy and Mazen el Sayyed
Funding: MPP
Status: Ongoing

Principal Investigator: Monique Chaaya
Dementia in Lebanon: a follow-up study
Co- PIs: Hala Darwish, Ramzi Hajjar
Funding: MPP and LCNRS
Status: Ongoing

Principal Investigator: Hala Darwish
Brief International cognitive assessment for MS (BICAMS)- Arabic
Co PIs: Samia Khoury and Bassem Yamout
Funding: MENACTRIMS, Novartis
Status: Ongoing

Principal Investigator: **Firas Kobaissy**
Developing Sensitive and Specific Biosensor for Traumatic Brain Injury Biomarkers"
Co PIs: **Hala Darwish**, Pierre Karam and Hani Tamim
Funding: Farouk Jabre Award February 2015
Status: ongoing

Research Interest:

- Primary and secondary prevention of cancer
- Harnessing the power of electronic technology to improve patient care
- Patient-centered nursing care

Ongoing Research

Principal Investigator: Gladys Honein-AbouHaidar
Co-Investigator: Joumana Antoun
Users' Acceptance of Electronic Patient Portal (EPP) for Self-Management of Diabetes and Chronic High Blood Pressure at the Family Medicine Clinic of the American University of Beirut, Lebanon
Funding: MPP
Status: Data collection

Patients often complain about difficulties booking appointments, renewing medications or sending and receiving messages from their physicians. Electronic patient portal (EPP) is a promising electronic technology allowing patients to access their clinical summaries online and facilitating interaction with physicians. Different cultures react differently to technologies and little is known about the acceptance of EPP use in health care in the Middle East region. The aim of this study is to explore users, both patients and physicians, acceptance of EPP for self-management of diabetes and chronic high blood pressure at the American University of Beirut Medical Center- Family Medicine Clinics (AUBMC-FMC)

We will use a vignette methodology to explore the determinants of EPP acceptance based on the Technology Acceptance Model (TAM) conceptual framework. 350 adult beneficiaries of AUBMC-FMC 20 years or older classified as having diabetes mellitus and/or chronic high blood pressure and all attending physicians and residents who are actively engaged in primary care services will be included.

Principal Investigator: Gladys Honein
Co-investigator and responsible for the design of the study: Tamar Avedissian
Is there a need for a guideline regarding anaphylaxis management for nurses working in schools and daycares in Lebanon
The aim of this study is to assess the Lebanese school nurses' current practices in the management of anaphylaxis reaction and to explore their perceived need for a protocol to manage anaphylaxis reaction.

Factors influencing the decision of end of life care
Funding: None

Status: Starting

The aim of this study is to look into factor variables involved in the decision to withhold treatment in ICU patients; to investigate relationship between religious affiliation and decision to withhold treatment in ICU patients and to investigate the relationship between the degree of religious practice and decision to withhold treatment in ICU patients. This study will rely on an exploratory qualitative research design using a semi-structured interview guide to assess mainly caregivers' perspectives on the organizational, professional, legal, cultural, social, spiritual and patient factors that influence end-of-life decision making

Principal Investigator: Gladys Honein-AbouHaidar
Co-Investigator: Mary Arevian
Addressing Modifiable Cancer Risk Factors among Under-Privileged Adults Covered by Universal Health Coverage in Greater Beirut Area Using Community-Based Participatory Action Research
Funding: Pending
Status: Starting

Developed countries made major strides towards cancer prevention. The scarcity of resources is a major barrier for cancer prevention in less developed countries. In Lebanon, a small middle-income country on the Eastern Mediterranean shore, the cancer burden is on the rise. The major risk factors for cancers in Lebanon are also on the rise. Behavioural risk factors including smoking, poor dietary habits and poor physical activity are often reported in the literature. Infectious-based risk factors for cancers are prevalent and despite being on the decline, their control remain insufficient. In this study, we will use a community-based participatory action research approach focusing on underprivileged communities located in the Eastern side of the capital Beirut in Lebanon to identify the perceived susceptibility for risk for cancer, the knowledge about the modifiable risk factors for cancer, and identify community-based approaches to address those risk factors.

Palliative Care in Older Adults in Lebanon
The purpose of this study is to evaluate the quality of palliative care (PC), the quality of life (QoL), symptom management, and functional ability among hospitalized older adults in need of palliative care in Lebanon.
The study will follow the observational survey design. Data will be collected from three hospitals: AUBMC, St. George, and Ain Wazein. Face to face interviews will be carried out using the Quality of Palliative Care Questionnaire-Adult (QPCQ-A) assembled using several instruments measuring quality of life, symptom prevalence and management, quality of care, and functional ability.

WELCOME

Welcome to the Rafic Hariri Hariri School of Nursing (HSON). We are delighted that you have chosen to study nursing at AUB and look forward to meeting each one of you. This is an exciting time for nursing—both at AUB and throughout the world.

In the field of nursing generally, nurses are taking on new and greater responsibilities. Although taking care of patients is still our primary responsibility, we are also playing a role in setting health care policy at the national, regional, and international levels and researching important health care issues.

Here at AUB, we celebrated our 100th anniversary in 2005 and our 110th anniversary in 2015. We have introduced new programs and are constantly updating and revising our curriculum. Our graduates are in great demand and they are occupying leadership positions in different countries in the world. In 2007 the BSN and MSN programs were granted unconditional accreditation by the Commission on Collegiate Nursing Education (CCNE) in the USA for five years and in 2012 the programs were reaccredited for a period of 10 years. AUB Hariri School of Nursing is the first school to be accredited by CCNE outside the USA. In 2008 the HSON received a $10M gift to endow the school and the building and in 2009 the Rafic Hariri School of Nursing building was inaugurated. The building houses faculty offices, classrooms, an auditorium, a computer lab, skills and simulation lab, a research center, and student facilities.

In 2015, HSON won three major regional awards; HSON received the best institution award, Dr. Huda Huijer the distinguished researcher award, and an MSN graduate the best thesis award. The Chi Iota Honor Society Chapter, the first in the region, was formally chartered by Sigma Theta Tau International (STTI) in 2015 and 131 members were inducted into this prestigious honor society. In 2017, the PhD in Nursing Science program was launched in 2018-19. In 2018, AUB granted HSON independent Faculty status and appointed Dr. Huijer as founding dean of the school. We continue to be proud of these accomplishments and we look forward to working with you to celebrate these achievements.
We hope this handbook will be a useful guide for you especially during the first couple of weeks when everything is so unfamiliar. If, however, you are lost or need help, please come and find us. We are eager to do whatever we can to make this a positive and rewarding experience for you.

We also welcome any comments or suggestions you may have on how we might change and improve on this handbook in order to make it more helpful for future Hariri School of Nursing students.

Good luck!

Dr. Laila Farhood, Ph.D, CNS
Interim Dean & Professor
Hariri School of Nursing

ADMINISTRATIVE APPOINTMENTS & COMMITTEES 2019-22

Interim Dean: Dr. Laila Farhood
Associate Dean for Academic Affairs: Dr. Samar Noureddine
Convener, Graduate Division: Dr. Samar Noureddine
Coordinators, MSN tracks:

- Nursing Administration and Management: Dr. Nuhad Dumit
- Adult Gerontology Clinical Nurse Specialist: Dr. Samar Noureddine
- Psychiatric and Mental Health Clinical Nurse Specialist: Dr. Laila Farhood
- Community and Public Health Nursing: Dr. Gladys Honein

Convener, Undergraduate Division: Dr. Nuhad Dumit:
Coordinator CNE and Offshore Projects: Dr. Lina Kantar
Co-coordinator CNE and off shore projects: Ms. Danielle Damianos

HSON COMMITTEES 2019-2022

Advisory and Search Committee:

1. Dr. Laila Farhood (Chair)
2. Dr. Samar Noureddine
3. Dr. Nuhad Dumit
4. Dr. Hala Darwish

Administrative Committee:

1. Dr. Laila Farhood (Chair)
2. Dr. Nuhad Dumit
3. Dr. Samar Noureddine

Graduate Studies Committee:

1. Dr. Hala Darwish (Chair)
2. Dr. Nuhad Dumit
3. Dr. Gladys Honein
4. Dr. Houry Puzantian
5. Dr. Lina Younan (Appointed)
6. Dr. Soha Fares (Appointed)
7. Dr. Samar Noureddine (ex-officio and representative on the Board of Graduate Studies)

Graduate Studies Departmental Assessment Committee:

1. Dr. Lina Younan (Chair)
2. Dr. Souha Fares
3. Dr. Samar Noureddine (ex-officio)

Undergraduate Curriculum & Undergraduate Student Academic Affairs Committee:

1. Dr. Lina Kantar (chair)
2. Dr. Nour Alayan
3. Mrs. Hera Tashjian
4. Dr. Dina Madi (Appointed)
5. Dr. Ghada Assaf (Appointed)
6. Dr. Angela Massouh (Appointed)
7. Dr. Nuhad Dumit (Ex-Officio)
8. Dr. Hala Darwish (Representative on the University Academic Development Committee)

Undergraduate Admissions and Financial Aid Committee:

1. Dr. Dina Madi (Chair)
2. Mrs. May Khoury
3. Mrs. Danielle Damianos
4. Dr. Ghada Assaf
5. Dr. Marina Adra (Appointed)
6. Dr. Lina Kantar (Representative on the University Admissions Committee)

Undergraduate Studies Departmental Assessment Committee:

1. Dr. Angela Massouh (Chair)
2. Dr. Marina Adra
3. Dr. Dina Madi
4. Dr. Nuhad Dumit (ex-officio)

Research Committee:

1. Dr. Samar Noureddine (Chair)
2. Dr. Angela Massouh
3. Dr. Houry Puzantian
4. Dr. Nour Alayan (Appointed)
5. Dr. Ghada Assaf (Appointed)
6. Dr. Hala Darwish (Representative on the University Research Board)
7. Dr. Lina Badr (Representative of AUBMC Nursing Services)

Student Affairs Committee:

1. Dr. Marina Adra (Chair) and representative on senate Student Affairs Committee
2. Dr. Nour Alayan, class advisor BSN II and Nursing Student Society (NSS) advisor
3. Dr. Ghada Assaf, class advisor BSN III
4. Mrs. May Khoury, class advisor BSN IV
5. Dr. Lina Younan, Graduate Student Advisor

HSON Representatives on Senate Committees:

1. Senate: Dr. Laila Farhood and Dr. Nuhad Dumit
2. University Admissions Committee : Dr. Lina Kantar
3. Board of Graduate Studies : Dr. Samar Noureddine
4. University Disciplinary Committee : Dr. Dina Madi
5. Library Committee : Dr. Souha Fares
6. University Publications Committee: Dr. Gladys Honein
7. University Research Board : Dr. Hala Darwish
8. University Committee on Student Affairs : Dr. Marina Adra
9. Academic Development Committee : Dr. Hala Darwish
10. Senate Steering Committee : Dr. Nuhad Dumit
11. Senate Committee on Faculty Affairs : to be elected by senate when senate by-laws are changed allowing two representatives from HSON to serve on senate

Representatives on University ad hoc Committees

1. Tenure and promotion Task Force: Dr. Laila Farhood
2. Task Force on Faculty workload: Dr. Samar Noureddine

Representative on FM Research Committee: Dr. Houry Puzantian (Appointed)
Representative on the University Assessment Committee: Dr. Suha Fares
Representative on the University Promotion and Tenure Committee (UPTC): Dr. Samar Noureddine

HSON Catalogue Committee

1. Dr. Samar Noureddine; Convener of the Graduate Division
2. Dr. Nuhad Dumit; Convener of the Undergraduate Division

HSON Newsletter Committee

1. Dr. Angela Massouh (Chair)
2. Dr. Gladys Honein
3. Dr. Marina Adra
4. Mrs. Talin Gulgulian
5. Mrs. Lynn Berbary Najem
6. Ms. Nisrine Ghalayini

HSON Social Committee:

1. Ms. Randa Farha (Chair)
2. Mrs. May Khoury
3. Mrs. Lynn Berbary
4. Mrs. Silva Dakessian
5. Mrs. Danielle Damianos
6. Mrs. Talin Gulgulian

HSON Representative on the Selection Committee for the Master Card Foundation (MCF) scholars: Dr. Lina Younan

PREFACE

This handbook has been prepared for undergraduate nursing students to provide detailed information about the Bachelor of Science in Nursing (BSN) program at the American University of Beirut (AUB). The handbook includes guidelines to facilitate the student's progress in the program from admission through graduation.

The faculty and administration of the Hariri School of Nursing hope that the educational experience at AUB will be a rewarding and challenging experience for each student. We are here to assist students to reach their professional and educational goals.

In addition to the policies found in this handbook that are specific to the undergraduate program at the School of Nursing, the student should obtain and keep a copy of the AUB Catalogue, which contains policies and procedures that apply to all undergraduate programs in the University. We urge you to consult the catalogue and this handbook often. If you have any questions or are unsure of a particular policy, please contact the BSN Convener who is available to assist you.

GENERAL INFORMATION ABOUT THE SCHOOL OF NURSING

Historical Background

The School of Nursing, founded in 1905, was the first nursing school in the Middle East. The five–year Bachelor of Science in Nursing program, established in 1936, was replaced in 1964 by a four–year program leading to the degree of Bachelor of Science in Nursing. Students entering the school as sophomores graduate in three calendar years. The RN-BSN program was reactivated and launched in 2003. The Masters of Science in Nursing (MSN) program was launched in 2003. The Bachelor of Science in Nursing program (BSN) and the MSN program are registered by the Department of Education of New York State, HEGIS codes 1203.00 and 1203.10, respectively. The BSN and MSN programs are accredited by CCNE, the Commission on Collegiate Nursing Education, in the USA. The AUB School of Nursing is the first School of Nursing outside the US territories to be accredited by CCNE.

Mission

The mission of the Rafic Hariri School of Nursing is to promote and maintain the highest educational standards of excellence, integrity, and professionalism in nursing, following the American model of nursing education and practice. The school aims to provide learning opportunities that will enable students to develop into competent nurses who respect cultural diversity while coordinating and delivering high–quality, compassionate nursing care in Lebanon and beyond, guided by ethical principles. The faculty believes education is an interactive process between faculty and students with both taking responsibility for active learning. The baccalaureate program, drawn primarily from the humanities, sciences, and caring disciplines, focuses on the use of nursing theory and research as a basis for practice. The master's program focuses on preparing nurses for advanced nursing practice roles. It is based on the use and generation of research-based knowledge to guide practice. The PhD program in Nursing Science aims to provide rigorous training for research careers in nursing and healthcare. The

program is intended to produce research scientists who will make significant and original contributions to nursing practice, health promotion, health maintenance, population health and health care delivery. Nursing students at AUB learn to think critically, develop professional attitudes and leadership skills, and appreciate the value of life-long learning and freedom of speech.

Programs

Undergraduate Programs:

» Bachelor of Science in Nursing (BSN)
» Registered Nurse-Bachelor of Science in Nursing (RN-BSN)
» Bachelor of Science-Bachelor of Science in Nursing (BS-BSN)

Graduate Programs:

Master of Science in Nursing (MSN)

MSN students can specialize in one of four areas:

1- Adult Gerontology Clinical Nurse Specialist
2- Psychiatric Mental Health Clinical Nurse Specialist
3- Nursing Administration and Management
4- Community and Public Health Nursing

PhD in Nursing Science (PhD)

Undergraduate Program Outline

Admission

Students holding diplomas from a 12–year secondary school may gain admission to the School of Nursing as first year nursing students (see page 38 for required courses at the freshman level). Freshman students wishing to transfer to the School of Nursing from AUB or another institution may gain admission provided they complete the required freshman courses.

Bachelor of Science in Nursing (BSN)

The School of Nursing follows the admission policies and criteria of the University.

RN–BSN Program

The curriculum is designed to permit the graduates of a technical program in nursing to pursue the degree of Bachelor of Science in Nursing provided the university entrance requirements are met. The time limit for completion of the program should not exceed six calendar years. A selected number of nursing courses may be validated if applicable.

Preferred requirement for admission to the program is three years experience in addition to the English Entrance Exam. The candidate may be asked to interview with the school's director and/or program convener.

According to the decree no. 855 dated 01/07/2015, issued by the Ministry of Education and Higher Education, holders of the technical baccalaureate (BT) are only eligible for admission to the same major as that of BT. In this case, holders of BT applying to the BSN program should complete the following remedial/pre-requisite freshman level courses prior to the BSN II year:

- 3 credits in Mathematics (MATH 101 or 102)
- 3 credits in Chemistry (CHEM-101)
- 3 credits in Biology (BIOL-101)
- 3 credits in Physics (PHYS-101, 103 or 200)

BS/BA-BSN Accelerated Program

The School of Nursing accelerated program is designed for individuals who have a BS/BA in fields other than nursing. The streamlined curriculum permits students to earn a BSN in 24 months. Students who graduate from this program are entitled to sit for the National Colloquium Exam to become registered nurses. The admission to the BS/BA-BSN program requires the following:

BS/BA degree in a field other than nursing
A minimum GPA of 75 including prerequisite courses and general education requirements
Completion of the following prerequisite courses prior to admission: ENGL 204, PSYC 201, Biostatistics course, PSYC 210, SOAN 201, and four elective courses

THE BSN DEGREE REQUIREMENTS

A student has a maximum of six (6) years to complete an undergraduate degree at AUB, if he/she enrolls as a sophomore student. You must complete all requirements for the BSN degree in order to participate in graduation activities.

Graduation Requirements

All recommendations for graduation are made by vote of the faculty, upon the recommendation of the academic committee.
To be eligible for graduation with the degree of Bachelor of Science in Nursing, the following requirements must be met:

- Completion of the prescribed program of study with a minimum of 103 credits after the freshman class or equivalent, 100 credits for those entering at English 204, 91 credits for those entering as registered nurses
- An overall average of 70 (or GPA of 2.2), excluding freshman courses.

The maximum time allowed for the completion of the degree program should be within the following specified periods:

BSN II	six calendar years
BSN III	four calendar years
BSN IV	two calendar years

Students must petition the academic committee for an extension of time if needed.
All undergraduate transfer students from AUB or from other recognized institutions of higher learning to the School of Nursing need to complete the required prerequisites and all required nursing courses. A minimum residency period of one year or 30 credits for within AUB transfers and 45 credits for transfers from outside must be completed at AUB.
Course credits pertinent to the nursing curriculum may be transferred according to criteria set by the admission and academic committees.

BSN PROGRAM OUTCOMES

I. Integrate knowledge from the arts, humanities, fundamental and basic medical sciences, and nursing theory in professional practice.
II. Demonstrate competency in clinical skills and critical thinking.
III. Utilize current research knowledge related to health promotion and maintenance, illness prevention and restoration of health of individuals, families and groups with diverse cultural backgrounds.
IV. Demonstrate leadership skills in the care management of clients in different health settings based on current health care policy.
V. Collaborate with other health providers to promote the well being of individuals.
VI. Demonstrate responsibility, accountability, and continued professional development.
VII. Participate in professional and community organizations for the promotion of the nursing profession in Lebanon and the region.
VIII. Demonstrate effective use of personal, interpersonal and group communication skills in practice.
IX. Espouse principles of professional ethics and personal integrity in nursing practice.

In order to achieve the BSN program outcomes upon graduation, the student is expected to achieve at the end of each class certain learning outcomes, called level outcomes).

BSN Student Outcomes		
BSN II (Sophomore Year)	**BSN III (Junior Year)**	**BSN IV (Senior Year)**
Upon completion of the sophomore year the student shall be able to: A. Demonstrate beginning skills in effective communication B. Identify healthcare needs of clients based on assessment of physical, psychological, and social parameters C. Identify developmental milestones in relation to the health-illness continuum D. Provide basic nursing care based on the nursing process E. Demonstrate skills in searching the nursing literature F. Identify ethical principles that govern the nursing profession	Upon completion of the junior year the student shall be able to: A. Utilize the nursing process in planning the care of the clients along the health-illness continuum B. Provide comprehensive/holistic care to individual clients across the life span C. Integrate theoretical knowledge from the social and basic sciences with that of nursing as a basis for practice D. Appreciate the use of research in nursing practice (assessment and intervention) E. Demonstrate therapeutic communication skills with clients F. Demonstrate ability to work in groups G. Identify ethical principles that govern nursing practice H. Demonstrate responsibility and accountability for personal and professional growth	Upon completion of the senior year the student shall be able to: A. Utilize appropriate theories and research findings from nursing and related fields in nursing practice B. Evaluate systematically the outcomes of care in a variety of settings based on the nursing process C. Apply knowledge of group dynamics while working with groups of clients, healthcare professionals and co-workers D. Demonstrate leadership skills in planning, managing, and evaluating care of clients E. Demonstrate responsibility and accountability to individuals, families, society at large, and personal professional growth and development F. Determine ethical, social, and political issues affecting the healthcare system in Lebanon

CURRICULUM AND COURSE REQUIREMENTS

The BSN curriculum totals 103 credits for students entering as sophomores and includes two summers of study. Students take courses in English, the Arts and Sciences, basic medical sciences, and nursing. Nursing courses include classroom teaching and clinical training in health-care settings. 12 credits electives in humanities that meet the general education requirement are required for graduation. Students will be asked to take half of the elective humanities from LIST I, and the other half from either lists I or II (check list of courses under GE section). The table below shows the curriculum plan, starting with the Freshman year

⁂ Electives as necessary to add up to 30 credits in total

⁂ ◈ For Arabic speaking students; for others credits have to be replaced by an elective

GE Refer to List of courses & requirements under General Education section

Students will be asked to take half of the humanities and social sciences requirements from LIST I, and the other half from either lists I or II (check list of courses under GE section)

*Passing grade for NURS 203 is **60**

**Offered either fall or spring semester in the senior year

***Offered either fall or spring semester in the senior year

Students can take EDUC 225 instead of PSYC 210. EDUC 225 does not require any prerequisite.

Updated Sept. 2018

Course Descriptions

Nursing courses are numbered according to level and normally follow a sequence. Below is a list of all undergraduate nursing courses. To the right of the course title is a set of 3 numbers that indicate the following:

- The first number following the title of a course indicates the number of class hours per week.
- The second number indicates the number of clinical hours per week. (Please note that not all courses include clinical hours.)
- The third number indicates the number of credit hours applied toward graduation.

NURS 200 Introduction to Nursing 2.0; 2 cr.
Introduces concepts basic to the nursing profession. The nature of nursing as a profession, past, present, and future, is studied with a focus on the role of nurses in meeting the health needs of humanity throughout the health–illness continuum. *Fall and spring.*

NURS 201 Introduction to Nursing Practice 1.3; 2 cr.
This course introduces students to concepts and interventions basic to nursing practice. The course uses the nursing process as the organizing framework, and the concepts of health, nursing, client, and environment are integrated throughout. Performance of basic client care skills are emphasized, including the scientific rationale for both health promoting and health restoring nursing interventions. *Prerequisite: NURS 200; corequisite: HUMR 248. Spring.*

NURS 202 Health Assessment 1.3; 2 cr.
The course focuses on assessment of health across the life span and provides the student with the knowledge and skills needed to assess the health status of individuals from infancy to old age. Emphasis is placed on assessment of the physical, psychosocial, and cultural dimensions of the individual. The course includes lectures and practical experiences in the assessment of individuals to identify normal and abnormal findings. *Corequisites: NURS 201 and HUMR 248. Spring.*

NURS 203 Biotatistics for Nurses 3.0; 3 cr.
This course is designed to introduce the BSN students to the concepts and applications of statistics in the nursing field. The course starts with a general overview of probability, types of data, and ways to summarize and present them. The course then introduces the concept of hypothesis testing and the methods to carry them. Applications on the computer using the SPSS software will be discussed in class. *Summer.*

NURS 205 Foundation of Professional Nursing 2.0; 2 cr.
In this course students will explore recent issues affecting the nursing profession in terms of role expansion of the nurse. The nursing process is covered as an organizing framework for nursing practice.

NURS 210 Pathophysiology 2.0; 2 cr.
This course focuses on the biologic alterations that affect body dynamic equilibrium or homeostasis. The content of this course is organized into three areas of focus based on the health–illness continuum: 1) control of normal body function 2) pathophysiology or alteration in body function 3) system or organ failure. *Prerequisites: BIOC 246, HUMR 248, and MBIM 237. Summer.*

NURS 300 Nursing Care of Adults I, Theory and Practicum 2.8; 5 cr.
This course covers scientific principles in the care of adults presenting with medical-surgical problems. It builds on the framework of man, environment, health and nursing. The practicum provides students with opportunities to apply knowledge in clinical practice. *Prerequisites: NURS 202 and NURS 210; corequisite: PHRM 240. Fall.*

NURS 302 Nursing Care of Adults II, Theory and Practicum 2.8; 5 cr.
This course is a continuation of NURS 300. Emphasis is placed on the following dysfunctions: metabolic and endocrine, neurologic, eye ear nose and throat, renal and urinary, integumentary, hepatic and biliary, rheumatic, as well as the infectious process. *Prerequisites: PHRM 240 and NURS 300. Spring.*

NURS 304 Nursing Care of the Expectant Family, Theory and Practicum 2.8; 5 cr.
This course focuses on reproductive health, from conception to the neonatal period. The content stresses the nurse's role in reproductive health and risk management. The practicum provides clinical application of knowledge, focusing on women in the childbearing cycle, the newborn, and families as clients in the hospital and outpatient settings. *Prerequisites: NURS 202 and NURS 210; corequisite: PHRM 240. Fall.*

NURS 306 Nursing Care of Children, Theory and Practicum 2.8; 5 cr.
This course focuses on the care of children, from infancy through adolescence. Topics include ambulatory and in-patient care, as well as primary, secondary and tertiary care. The practicum provides the students with opportunities to assess health needs of children based on knowledge of growth and development, and to implement nursing care, based on the nursing process. The roles of nurse as teacher, patient advocate and nurturer are emphasized. *Prerequisites: PHRM 240, NURS 304, and PSYC 210. Spring.*

NURS 307 Practicum I 0.6; 0 cr.
This course is designed to provide students with opportunities to practice advanced nursing skills learned in previous nursing courses, and builds on experiences gained in the sophomore and junior years. *Prerequisites: NURS 302, NURS 304, and NURS 306. Summer.*

NURS 308V Maternal Child Nursing, Theory and Practicum 3.8; 6 cr.
This course focuses on the childbearing family from conception to the newborn period as well as primary and tertiary care of the ill child from infancy to adolescence. The clinical component emphasizes the application of knowledge acquired in class in the care of the childbearing family and children with illnesses from infancy to adolescence.

NURS 311V Nursing Care of Adults, Theory and Practicum 3.8; 6 cr.
Facilitates the development of advanced knowledge and application of scientific principles in the care of clients representing medical–surgical problems of the adult population. This course builds on the framework of person, environment, health status, and nursing. The clinical component provides an opportunity for advanced clinical application of concepts discussed in class in the care of patients and their families.

NURS 312 Mental Health and Psychiatric Nursing, Theory and Practicum 2.8; 5 cr.
The holistic philosophy of clients as bio–psycho–social entities is stressed in both mental health and mental illness. General theories of psychiatry and mental health therapies are presented. The course provides clinical experience in psychiatric–mental health settings. Emphasis is placed on the quality of coping abilities of clients in varying degrees of stress and crisis.

Opportunities are provided for students to work collaboratively with multi–disciplinary health teams to assess, plan, and implement relevant nursing interventions in both mental health and illness. *Prerequisites: SOAN 201 and PSYC 201. Fall and spring.*

NURS 313 Leadership and Management in Nursing, Theory and Practicum 3.6; 5 cr.

This course discusses concepts of leadership, management, creativity, analysis, power, change, and evaluation. Students investigate, analyze, and conceptualize the different modalities of leadership, utilizing nursing and management theories. The practicum allows the student to explore his/her role as a potential leader. The learner observes and assists in the practice of different modalities of leadership and managerial skills in a variety of health care settings.

NURS 314 Community Health Nursing, Theory and Practicum 2.8; 5 cr.

The course provides knowledge in the broad area of the field of nursing, public health, and primary health care. The levels of prime concern are the small group, including the family and its individual members, and the large group, including the community. The focus of the clinical component is on the promotion and maintenance of high levels of health and well-being, and prevention of illness and disability. *Fall and spring.*

NURS 400 Critical Care Nursing, Theory and Practicum 2.6; 4 cr.

This course focuses on the care of clients with critical care problems. Emphasis is placed on cardiovascular and respiratory problems, neurologic disturbances, shock, sepsis, metabolic and endocrine imbalances, altered nutrition, renal failure, emergency and disaster nursing. The practicum provides opportunities to apply knowledge in clinical settings. *Prerequisites: NURS 302 and NURS 307. Fall.*

NURS 402 Mental Health and Psychiatric Nursing, Theory and Practicum 2.8; 5 cr.

This course provides the mental health setting for self-awareness and therapeutic use of self in effective communication. The holistic philosophy of clients as bio-psycho-social entities is stressed in both mental health and mental illness. General theories of psychiatry and mental health therapies are presented. The practicum provides clinical experience in psychiatric-mental health settings. Emphasis is placed on the quality of coping abilities of clients in varying degrees of stress and crisis, with experiences in working with multi-disciplinary health teams to assess, plan, and implement relevant nursing interventions. *Prerequisites: Senior standing, SOAN 201, and PSYC 201. Fall and spring.*

NURS 404 Nursing Informatics 2.0; 2 cr.

This course focuses on the history of health care informatics, basic informatics concepts, and health information management applications. The student progresses from developing knowledge of basic concepts and methods of health care informatics; to learning about specific information management applications in health care administration, practice, education, and research; and finally to a hands-on experience with a specific application of his/her own choosing. *Prerequisite: consent of instructor. Fall.*

NURS 405V Critical Care Nursing, Theory and Practicum 2.6; 4 cr.

This course addresses the management of critically ill adults. Emphasis is placed on diagnostic reasoning, interventions, and outcome assessment in patients presenting with complex cardiovascular, respiratory, renal and metabolic problems, as well as trauma. The clinical component provides experiences where students apply concepts learned in class in critical care

areas in the hospital. *Prerequisite: NURS 311V.*

NURS 406 Nursing Research 3.0; 3 cr.
Focuses on the process involved in the scientific approach and its application to nursing. Special emphasis is on the basic research steps, the research design, assessment measures, and data analysis with a focus on research utilization. *Prerequisite: NURS 203. Fall.*

NURS 408 Community Health Nursing, Theory and Practicum 2.8; 5 cr.
This course provides knowledge in the broad field of nursing, public health, and primary health care. The levels of primary concern are the small group, including the family and its individual members, and the large group, including the community. The practicum provides field practice through collaboration with other health professionals in primary care settings, with focus on health promotion, maintenance, and the prevention of illness and disability. *Prerequisite: Senior standing. Fall and spring.*

NURS 410 Leadership and Management in Nursing, Theory and Practicum 3.6; 5 cr.
This course discusses how professional nursing incorporates the concepts of leadership, management, creativity, analysis, power, change, and evaluation. In this course students investigate, analyze, and conceptualize the different modalities of leadership, utilizing nursing and management theories. The practicum allows students to explore their role as potential leaders. Students observe and assist in the practice of different modalities of leadership and managerial skills in a variety of health care settings. *Prerequisite: Senior standing. Spring.*

NURS 411 Intensive Practicum in Area of interest 0.9; 0 cr.
This course focuses on preparing students towards their transition to professional nursing practice. Opportunities are provided for students to synthesize knowledge and refine skills acquired in the planning, provision and evaluation of nursing care, communication, and interdisciplinary practice in a clinical area of their interest. Consent of instructor is required for the site of clinical practice. *Prerequisite: Senior standing. Spring.*

IPEC 300 Interprofessional Education and Collaboration 1.0; 1 cr.
This is a required course for third-year medical, senior undergraduate nursing and Masters of Public Health students, and it aims at demonstrating how population health is best promoted and safe, patient-centered care is best provided through a collaborative health teams approach. The course will be based on cases designed by faculty members belonging to the three aforementioned disciplines, on topics on which inter-professional partnership is necessary. Discussion groups combining students from all three professions will be moderated by faculty members from the three professions. Students will learn the roles and responsibilities of other health professions and how to function in interprofessional teams. *Senior Standing*

ACADEMIC RULES AND REGULATIONS

Categories of Students

Full-Time Students

To be considered a full-time student, a student must carry a minimum load of 12 credits per semester. (Students can register for up to 17 credits per semester.) During the summer session, full-time students are required to take 9 credits. Registering for more than 17 credits (or 9 credits during the summer) requires the approval of the School of Nursing Director.

Part -Time students

These include the following categories:

- AUB staff members who are working toward a degree.
- Those who need to complete less than 12 credits for an undergraduate degree.
- Those who are granted permission by the appropriate faculty committee for health or family reasons to take less than a full course load.

Supervision

Each student will be assigned an academic adviser in his/her first semester who will guide the student on academic matters throughout his years of study. The adviser must be consulted and approve the student's schedule each semester. Students can find out the name of their advisers on the Student Information System (SIS).

Attendance

CLASSES AND LABORATORIES

Students are expected to attend all classes, laboratories, and any other required activities. Absence by students, whether excused or not, from any class or laboratory session does not excuse them from their responsibility for the work done or from any announcements made during their absence.

Students who are absent from more than one fifth of the number of lectures of any course during a semester lose all credit for the course.

Students may not be excused from laboratory and field requirements. All missed clinical and field requirements must be made up. In case of repeated absences from clinical courses, over one fifth of the total hours, the student may be asked to drop the course.

All Nursing courses that contain clinical parts should have an Objective Structured Clinical Examination (OSCE) as part of course assessment

- A cumulative average of 70 (or GPA of 2.2) and above should be scored on the exams, regardless of the total course grade
- Passing a course requires:
    - Scoring above 70 (Grade of C+) as total average on the theory part,
    - Passing the OSCE and
    - Passing the clinical part.

Examinations and Quizzes

- Students may not absent themselves from announced final examinations and quizzes unless they present an excuse considered valid by the coordinator of the course. The course coordinator may then require the student to take a make-up examination.
- Students taking non-nursing courses from the other faculties of the University are required to follow the attendance regulations of that faculty.

Computer Literacy

Undergraduate students are expected to have a basic level of computer literacy. Ability to use Microsoft Word and Power Point programs is a minimum requirement, since most courses require term papers and oral presentations. If you feel that you are weak in this area, please take advantage of the various free computer programs that the Academic Computing Center offers throughout the year. You can reach the computing center through the AUB website or by calling 2599.

Grading System

- The School of Nursing uses the following grading system:

Evaluation of the student's achievement will include their work in theory, practice, as well as professional attitudes and behavior.

Cumulative Average	GPA	Cumulative Average	GPA	Cumulative Average	GPA	Cumulative Average	GPA
‹60	0	67	1.86	75	2.73	83	3.46
60	1	68	1.98	76	2.82	84	3.54
61	1.13	69	2.09	77	2.92	85	3.63
62	1.26	70	2.2	78	3.02	86	3.7
63	1.38	71	2.31	79	3.11	87	3.78
64	1.5	72	2.42	80	3.2	88	3.86
65	1.63	73	2.52	81	3.29	89	3.93
66	1.74	74	2.62	82	3.38	›=90	4
I Incomplete							
P Pass Normally Used for Theses and Projects							
PR In Progress							
W Withdraw							
F Fail							

All final grades are expressed in multiples of one.

- The passing grade in all nursing courses is 70 (or C+) except in NURS-203 (passing grade is D).

INCOMPLETE GRADES

- Incomplete course work will be reported as an "I" followed by a numerical grade that reflects the evaluation of the student available at the end of the semester.
- To secure permission to complete the work for a course, a student must submit a valid excuse to the instructor of the course and the Academic Committee within two weeks from the date of the final exam for the course.

- Students permitted to complete work for a course must do so within **four weeks** from the start of the next regular semester. When the incomplete work has been completed and evaluated by the instructor, the director of the school (upon the recommendation of the Academic Committee) will consider changing the course grade. If this is done, a new grade will be reported to the Office of the Registrar.
- If no valid excuse is presented and the work is not completed within the time limits specified above, the "I" will be dropped, and the numeric grade available becomes the final grade in the course.

REGISTRATION

Academic Year

The academic year at AUB is divided into two semesters, fall, and spring, followed by a summer session. Each semester has a reading period and a final exam period, followed by a break before the next semester.

Course Registration

New students should register on-line via the Internet in August (Fall admissions)or January (for Spring Admission) prior to the start of the academic year. The registration procedure is explained during the orientation week that is usually held during August.

Drop and Add

After the start of classes, at a date indicated in the university calendar, students may make changes in their schedules through a process known as "Drop and Add". After obtaining the approval of their advisers, students may change their courses. Depending on the changes that are made, students may need to settle their accounts at the Office of the Comptroller to adjust their tuition fees according to the final number of credits registered.

Payment of Fees

Each AUB student must pay all his/her tuition fees and other charges levied.

1. All students must finalize registration, including payment of tuition fees according to the academic calendar for the first and second semesters. Under special circumstances, late registration will be permitted during a period of no more than five working days after the announced deadline, but subject to a late registration fee (***150, 000 L.L.).***
2. Students who demonstrate financial need may make formal application for deferred payment arrangements for tuition fees to the Office of the Comptroller according to the academic calendar for the first and second semesters. These students are still required to complete all registration formalities within the set deadlines. Deferred payments are not permitted for the summer session in any faculty.
3. A student who applies for deferred payment must pay at least 50% of the net amount of tuition due. All other charges must be paid in full with no deferrals by the set deadlines. A student must pay a deferred payment application fee of $33, whether approved or not.
4. Every student granted deferred payment must sign a statement indicating agreement that failure to complete payment by the set deadline will result in receiving no credit for the semester in which the student failed to pay.

Students are expected to meet all financial obligations by the set deadlines. The University reserves the right to place a hold on the student's record that will prevent registration for future semesters and the release of transcripts and diplomas, as well as access to other University services, if he/she fails to promptly meet his/her financial obligations to the University.
Please consult the Office of the Registrar (ext: 2570 /2571) or the Registrar's website: http://staff.aub.edu.lb/~webregist/ for up-to-date schedules for registration and payment of fees.

ACADEMIC PROGRESS

Promotion

Students shall be promoted at the end of the summer session after completion of **30 or more credits** beyond the requirements from the previous level. However, students who register in September and who lack 6 or fewer credits for completion of a class will be registered in the next higher class at the discretion of the academic committee. **In order to be promoted, students must attain a minimum average of 68(2.0) at the end of the second regular semester (sophomore year) and 70 (GPA 2.2) in the following years.**

Placement on the Dean's Honor List

To be placed on the Dean's Honor List at the end of a semester a student must:

- Be a fulltime student (registered at least twelve credits of new courses other than those repeated
- Not be on probation.
- Have passed all courses taken during the semester, have an overall average of 85 (GPA of 3.7), or be ranked in the top 10% of the class and have an average of 80 (GPA of 3.2).
- Not have been subjected to any disciplinary action within the University.

Placement on Probation

In concordance with AUB policies, a student will be placed on probation for any of the following reasons:
if the student fails 6 or more credits at the end of a semester, and/or
if the student does not attain the minimum required semester average of 65 (GPA:1.7) for the first regular semester of BSN II or 68 (GPA: 2.0) for the second regular semester of BSN II, or70 (GPA 2.2) for the following years.

Students in their freshman and sophomore years will be placed on probation at the end of their first semester only if they fail in one half or more of the credit hours carried.
These regulations do not apply to part-time students until they have completed at least 12 credits. For part-time students, a semester is defined as consecutive courses totaling 12 credits.

Removal from Probation

Action to remove probation at the end of a semester will be taken provided the full-time student:

- has passed all courses taken during the semester;

- achieved the minimum required average for that semester; and
- achieved the minimum yearly average required.

A student is expected to be removed from probation within two regular semesters.

Repeating Courses

- A student may repeat a course with the consent of the adviser and course coordinator.
- A student must repeat all required courses that he/she fails.
- When a course is repeated, the highest grade obtained will be considered in the calculation of the cumulative average.
- In exceptional cases, a student may be allowed to take a make-up exam for a course failed, within four weeks from the start of the next regular semester. S/he must have the approval of the course coordinator and the Academic Committee in order to do this.
- Repeating a course may delay the student's graduation from the program

Repeating the Year

The Academic Committee may require a student to repeat the year if he/she

- Fails in one-third or more of the credit load attempted during that year; or
- Fails to remove probation within two semesters; or
- Fails to obtain the minimum yearly average.

A student repeating the year must register for a full load and repeat all courses in which he/she has scored below the minimum required for that year.

Dismissal from the School of Nursing

A student may be **dropped from the BSN program** by vote of the faculty upon the recommendation of the Academic Committee for any of the following reasons

- fails to remove probation within two regular semesters;
- fails in one-third or more of the load attempted during that year and fails to attain the minimum yearly average;
- fails to satisfy the requirements of a repeated year; or
- is not making satisfactory academic progress, has not shown sufficient professional promise, or has behaved in a manner below the norms expected by the school.

Once the student is dropped from the BSN program, he/she will be placed as Majorless for 2 consecutive regular semesters to secure a transfer to another faculty. Failure to do so will lead to the students' **Dismissal from The Hariri School of Nursing**

Application for Readmission

When, in accordance with university regulations, a student is dropped, the implication is that the student is not qualified to continue his/her education at the School of Nursing. Consideration for readmission is given for one of the following reasons:

- If the student was not able to do his/her work efficiently because of health reasons. In such cases, the school will require a medical report from the university physician.
- If the student's adviser or a faculty member or administrative official of the University knows of certain family problems that may have influenced the academic achievement of the student.
- If, after spending one or two years at another institution, the student is able to present a satisfactory record and recommendation.

Ordinarily, supporting documents for the first two reasons must be presented within 30 days of when the student is dropped from the school, but in exceptional cases this presentation may be made at the beginning of the following regular semester.

If a student is on probation and leaves the University after the tenth week of the semester, the Academic Committee will decide whether he/she may be allowed to return to the University.

AWARDS, FINANCIAL AID AND SCHOLARSHIP

AWARDS

A number of awards are given to students who demonstrate exceptional academic achievement. The awards and related criteria are:

Penrose Award

This is a non-cash award that is made to an outstanding graduate of the school on the basis of scholarship, character, leadership, and contribution to university life.

Women's Auxiliary Awards

Cash and certificate awards are granted to senior students who meet the following criteria: academic achievement, professional integrity, and seriousness of purpose, contribution to professional and university life, and willingness to work at the AUB Medical Center after graduation. The awards are:

- Emily Asfour
- Mary Crawford (Florence Nightingale)
- Agnes Shammaa
- Laila Iliya
- Helen Zarwi
- Nada Alameddine Kanso
- Najla Morston
- Jacqueline Rubeiz
- Hanneh Shahine
- Ann Smith

Lions Award

This is a non-cash award, granted to a student who has been commendable for academic achievement and professional integrity.

Women's Auxiliary Contracted Scholarship: Annette Hajjar Scholarship.

The recipient of this award is required to work at the AUB Medical Center for a period of two years.

Janet Haddadin Nursing Award

The Janet Haddadin Nursing Award of $1000 is granted to a graduating undergraduate nursing student with the highest Cumulative GPA in Nursing"

Financial Aid and Scholarships

AUB offers financial aid to qualified students in the form of need-based financial aid grants, merit scholarships, and student work-study.
Students applying for financial aid for the first time should apply online. For more information, please visit the website of the Office of Financial Aid: http://staff.aub.edu.lb/~webfaid/ Financial need is assessed for each student on the basis of factors such as family income, number of siblings enrolled in school/university, assets such as home(s), and other property, and major

changes in financial status. Financial need is a necessary—but not a sufficient condition—for an award. Students with high need and excellent scholastic achievement records are more likely to receive awards than students with low need and average scholastic records.

Scholarships are available for Nursing students and awarded based on financial need and academic performance.

GENERAL POLICIES AND INFORMATION

Non-Discrimination Policy

AUB encourages a diverse student body and workforce, and is committed to the principle of equal opportunity in education and employment. In the administration of its educational, admissions, and employment policies, and other university programs and activities, AUB does not discriminate on the basis of race, color, religion, age, national or ethnic identity, gender or gender identity, marital status, disability, genetic predisposition or carrier status, alienage or citizenship status, political affiliation, or any legally protected characteristic, except as required by Lebanese law.addition, in compliance with Title IX of the US Education Amendments of 1972, which prohibits sex discrimination in education and interprets sex discrimination as including sexual harassment and sexual violence, the University maintains a Title IX coordinator in the Office of the Provost and may appoint deputy Title IX coordinators as needed. Inquiries and complaints regarding sex discrimination, sexual harassment, and sexual violence may be directed to the Title IX coordinator, College Hall, 5th Floor, Beirut, Lebanon, or by email at integrityofficer@aub.edu.lb. The Office of the Provost maintains a resource page on Non-Discrimination, Harassment, and Title IX at www.aub.edu.lb/titleix. AUB will provide reasonable accommodation consistent with the law to members of the AUB community with a disability. What constitutes a reasonable accommodation depends on the circumstances and, thus, will be addressed by AUB on a case-by-case basis.

Academic and Professional Integrity

The Rafic Hariri School of Nursing follows AUB policy regarding the academic conduct of students. **The faculty and staff at the Hariri School of Nursing take all issues related to academic and professional integrity extremely seriously.**
Students are expected to have high standards of integrity in both the clinical and academic settings. Integrity is a reflection of self-respect and is demonstrated by a student's behavior in class and in the clinical setting.
Academic integrity and honesty are central components of a student's education. Ethical conduct at the University will be carried into the student's professional career.
Academic dishonesty, including but not limited to cheating and plagiarism, is deplored and not tolerated. Any act of cheating may be ground for probation, suspension, and/or expulsion from the school. Any act for plagiarism may be grounds for a failing grade on the paper and in the course. In addition, other sanctions may be imposed by the school for acts of academic dishonesty.

In clinical settings, students are expected to protect patients' confidentiality, and to be honest in any documentation regarding the patient's condition and their own assessment and interventions. Students are expected to maintain high professional standards, including being physically, intellectually, emotionally and academically prepared when caring for patients.

Student Code of Conduct (http://pnp.aub.edu.lb/general/conductcode/index.html)

The purpose of this code is to provide students with a clear statement of the standards of behavior expected in an educational environment, so that they make responsible choices regarding their participation in the academic community and understand the consequences of their infringement of these standards. Violations may be of an academic or non-academic nature.

Jurisdiction of academic violations lies initially under the authority of the Dean of the faculty or school to which the student belongs. Misconduct that is clearly non-academic falls under the jurisdiction of the Dean of Student Affairs who will take the necessary action in consultation with the Dean(s) of the faculty or school to which the student belongs.

The following are examples of actions deemed in violation of the Student Code of Conduct; they are not intended to define misconduct in exhaustive or exclusive terms. Any student who violates the principles described in the preamble to this document shall be subject to disciplinary action in accordance with the Student Code of Conduct.

I. Definitions of Misconduct

A. Academic Misconduct

Offences involving academic misconduct include, but are not limited to, the following:

1. Cheating

While taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, cell phones, or another's work.

Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

2. Plagiarism

Whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.

3. In-Class Disruption

Students in class are expected to behave appropriately, and shall not disrupt classes or exams by extraneous conversation and/or misbehaving.

4. Dishonesty

Students are expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different

category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).

b. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).

c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

d. Stealing or damaging library books.

e. Unlawfully copying computer software.

f. Engaging in bribery of any kind.

B. Non-Academic Misconduct

1. Disruption/Obstruction

Students have the right to express their opinions on matters of concern to the University in an organized manner and in a public space, excluding residences on campus, but they must notify and consult with the Dean of Student Affairs before doing so. The nature of the event and any publicity accompanying it must be reviewed by the dean to assure that neither Lebanese law, nor university policies and norms are being violated.

In cases where student-sponsored events, including protests, sit-ins, and demonstrations are, after such consultation, not approved by the Dean of Student Affairs, or, if needed by the Board of Deans or the president, it may become necessary for the dean of student affairs to undertake disciplinary measures and even to instruct campus protection to bring the public gathering to an end.

Disrupting or obstructing the normal educational process or any university function or activity by student demonstrations, sit-ins, or 'strikes' is strictly prohibited. This includes, but is not limited to: disrupting classes, library operations, seminars, exhibitions, meetings, ceremonial events, or examinations; impeding or preventing others from attending such events; falsely activating a disaster alarm; or making a threat.

Under no circumstances are any members of the university family to be intimidated or threatened in the execution of their normal duties and responsibilities. That means that students and faculty who wish to hold or attend classes or to go to their offices or places of study shall not be prevented from doing so; non-academic staff and administrators shall not be impeded from going to their places of work.

2. Distribution of Unauthorized Published Material

The public distribution and posting of published materials such as fliers, leaflets, posters, audiovisuals, etc., must be approved and stamped by the Dean of student Affairs. The campus protection office will remove from display any such unauthorized material.

Students must not distribute, possess, store, or use, on campus or at a university-authorized event off campus, any kind of weapon, device, explosive, dangerous chemicals, hazardous materials, or any other instrument designed to do bodily harm or to threaten bodily harm. Instruments used to simulate such weapons, which endanger or tend to endanger any person, shall be considered weapons.

Students are also prohibited from distributing, possessing, storing, transferring, selling or attempting to sell, delivering, using or attempting to use, any illegal drugs, narcotic or hallucinogenic, on campus or at any university-authorized event off campus.

3. Theft

Stealing on campus or at a university-authorized event off campus, including unauthorized use of university equipment or services (e.g., telephones, photocopiers, or computer facilities), or possession of stolen property, is prohibited.

4. Destruction of Property/Endangering Public Safety

Students are expected to protect university property and to respect the safety of others. Acts contrary to these principles, which include, but are not restricted to, the following, are subject to disciplinary procedure:

a. Engaging in vandalism or other intentional damage (such as spray painting or graffiti) to property on campus or at university-authorized events off campus.

b. Littering, such as disposing of waste (empty bottles, cigarette butts, food containers, etc.) in other than designated places on campus.

c. Unjustified discharge, damaging, or tampering with any fire extinguisher, fire alarm, or other safety devices.

d. Taking, or attempting to take, action that damages or could damage private property, without the consent of the owner or person legally responsible.

e. Appropriating, or attempting to appropriate or possess, private property, without the consent of the owner or person legally responsible.

f. Unauthorized entry, unapproved duplication of keys or use of such, or unauthorized use of campus facilities.

5. Mental or Physical Harm

Acts that inflict mental or physical harm are prohibited, including the following:

a. Engaging in physical aggression including, but not limited to, assault.

b. Engaging, or attempting to engage, in intimidation, coercion, extortion, blackmail, or bribery; bullying; threatening violence, injury, or harm to others on campus or at university-authorized events off campus; endangering or tending to endanger the safety, health, or life of any person.

c. Engaging in behavior that creates a substantial risk of, or results in, injury to others, such as committing arson or causing a riot.

d. Using force, inciting violence, inflicting or attempting to inflict injury to others on campus or at a university-authorized event off campus.

e. Engaging in any activity that endangers the health and safety of an individual or demeans an individual in conduct of an unbecoming or humiliating nature, or in any way that detracts from an individual's academic pursuits.

6. Possession of Dangerous Weapons or Materials

Students must not distribute, possess, store, or use, on campus or at a university-authorized event off campus, any kind of weapon, device, explosive, dangerous chemicals, hazardous materials, or any other instrument designed to do bodily harm or to threaten bodily harm. Instruments used to simulate such weapons, which endanger or tend to endanger any person, shall be considered weapons.

Students are also prohibited from distributing, possessing, storing, transferring, selling or attempting to sell, delivering, using or attempting to use, any illegal drugs, narcotic or hallucinogenic, on campus or at any university-authorized event off campus.

7. Discrimination and Harassment

Students are not allowed to discriminate on the basis of race, gender, age, religion, national origin, ethnic origin, marital status, mental or physical disability. Nor shall they harass, intimidate, insult, or threaten others whether verbally, in writing, or through electronic means.

Engaging in sexual harassment, e.g., requests for sexual favors, unwelcome sexual advances, unwelcome physical contact of a sexual nature, spoken comments or abuse (including email) of a sexual nature, and the public display of sexually suggestive objects or pictures is prohibited (refer to the University Policy Against Discrimination and Harassment).

8. Smoking and Alcohol

The consumption of alcohol, on campus, by students is not permitted. Smoking is not permitted in university buildings other than private residences and those areas within the student dormitories, as may be designated from time to time by the Dean of Student Affairs (refer to the University Policy on Smoking). Students must abide by the following:

- Smoking is not permitted in any University building, including the Medical Center, except for private residences and student dormitory rooms, as may be designated by the Dean of Student Affairs. Smoking is prohibited in all dormitory common rooms, corridors, lavatories, and other public spaces. Smoking is prohibited in all university vehicles.
- Persons smoking in outside open areas, or in private residences, or in designated dormitory rooms where smoking is permitted, are required to ensure that smoking materials are disposed of in a tidy and safe manner. On no account are cigarette butts to be disposed of on the ground or thrown into the wooded or landscaped areas.
- All persons on AUB property are expected to respect this Smoking Policy. Breaches of the Policy should be reported to the Environmental Health and Safety Center, extension 2360. Persons who are found to have breached the Policy will be subject to disciplinary actions.

9. Inappropriate Sexual Behavior

Publicly engaging in sexual behavior is prohibited as deemed by Lebanese law.

10. Use of Computers

Accessing protected computer accounts or other computer functions, knowingly transmitting computer viruses, and unethical use of AUB access is prohibited (refer to the University Policy on the Use of Computers).

II. Jurisdiction over Violations

AUB holds all students responsible for actions occurring on campus and at the AUB Farm, the AUB medical center, and university-authorized events.

Students attending an off-campus function as representatives of the University (such as, but not limited to, students serving on academic or athletic teams or engaging in club activities) are subject to disciplinary sanctions for violations of this code.

III. Disciplinary Actions

Disciplinary action will be imposed according to the nature (academic or non-academic) and severity level of the violation.

A. Academic Misconduct

In principle, enforcement of disciplinary actions for academic violations is carried out by those immediately responsible.

It is the responsibility of the faculty to uphold university policies. Thus, the immediate responsibility for dealing with instances of cheating, plagiarism, and other academic violations rests with the faculty member. If a faculty member has good reason to believe that a student has violated academic standards, it is his or her responsibility to discipline the student expeditiously. A faculty member who has good reason to believe that a student has violated academic standards must give a grade of zero on the exam or assignment where the violation occurred.

When the instructor has taken disciplinary action, he or she should send a letter to the Student Affairs Committee in the faculty or school in which the student is enrolled, informing that committee of the incident and the action taken. A copy of the letter will be placed in the student's file, as well as forwarded to the student's advisor for follow-up.

B. Non-Academic Misconduct

Violations of a non-academic nature are the responsibility of the Dean of Student Affairs, in consultation with the dean of the faculty or school in which the student is enrolled and, as necessary, the chief of campus protection. Students should know that the laws of the Republic of Lebanon apply on campus, and those who violate these laws may be subject to criminal prosecution.

C. List of Primary Disciplinary Actions

Documentation of disciplinary actions, other than suspension and expulsion, will not become part of the student's permanent record. Records of the University Disciplinary Committee decisions, including charges and sanctions, will be maintained as part of the confidential records in the office of the respective Dean, for a period of up to four years after the student graduates or ceases to be a student.

D. Required Withdrawal from Campus Pending Hearing

In extraordinary circumstances, when the student's continued presence is deemed a danger to the university community, the student will be required to withdraw from the campus, pending a meeting of the University Disciplinary Committee. This action shall normally require the approval of the president of the University.

E. Secondary Disciplinary Actions

In addition to the disciplinary actions listed above, the following secondary disciplinary actions may be imposed upon those who violate the Student Code of Conduct. Secondary disciplinary actions may be of an academic or non-academic nature

IV. Complaint Procedure

Any person subject to, or who witnesses, a violation of the Student Code of Conduct should forward a written complaint to a faculty member, a chairperson, or any university official. Academic violations shall be forwarded to the dean of the faculty to which the student accused of the violation belongs. Non-academic violations shall be referred to the dean of student affairs. Violations that may require suspension or expulsion will be referred by the concerned dean to the University Disciplinary Committee.

The University Disciplinary Committee will deal with alleged violations in a manner that ensures that those charged with a violation the committee may take into consideration the student's cumulative discipline record.

Range of Actions

Informal Warning

This may be oral or written. It is a statement that the student has inadvertently violated a university regulation. The warning will be recorded in the respective Dean's records and the student will be documented.
Examples: *Littering and smoking in prohibited areas.*
Reprimand

This will be in writing. It is a statement that the student has violated a university regulation. It is intended to communicate most strongly, both the disapproval and the reprimand of the university community. The reprimand will be kept in the respective Dean's records.
Examples: *Inadvertent plagiarism - failure to cite sources appropriately, and inappropriate physical contact.*
Dean's Warning

This will be in writing. Only two Dean's Warnings are allowed in a student's academic career at AUB. It is recommended that any violation of university regulations after the second Dean's Warning results in consideration of suspension. Such a warning is kept in the file of the student and the respective Dean's records.
Examples: *Plagiarism, academic dishonesty, disruption-obstruction, mental or physical harm, discrimination and harassment.*
Suspension

This will be in writing and will form part of the student's permanent record. A student will be suspended for a fixed period of time during which the student may not participate in any academic or other activities at the University. At the end of the suspension period, the student may be readmitted to the University, only upon the recommendation of the University Disciplinary Committee.
Examples: *Cheating, theft, and destruction of property.*
Expulsion

This will be in writing and will form part of the student's permanent record. Expulsion denies the student the right to participate in any academic or other activities of the University for an indefinite time. Only under the most unusual circumstances, and upon the recommendation of the University Disciplinary Committee, will an expelled student be readmitted to the University.

Examples: *Academic dishonesty, possession of dangerous weapons or materials, and endangering public safety.*

N.B. Any person who maliciously lies to cover up an act sanctioned by the code of conduct will be considered to be an accessory after the fact and may be subject to disciplinary action.

Secondary Disciplinary Actions – Academic

The student may be prohibited from participating in the work study program.

The student may be prohibited from receiving any form of financial aid, scholarship, or monetary award.

The student may be prohibited from receiving any form of honor, merit award, or other academic recognition award.

The student may be prohibited from holding a graduate assistantship.

The student may be given a failing grade in a course or a test or any other form of academic assessment.

Secondary Disciplinary Actions – Non-Academic

The student may be prohibited from representing AUB in any official role, activity, or event.

The student may be prohibited from serving as an officer of any AUB organization including club, team, or society.

The student may be prohibited from living in any AUB hall of residence or similar facility.

The student may be strongly advised to attend treatment or counseling as determined by the director of the counseling center, in consultation with the Dean of Student Affairs.

The student may be required to make financial restitution.

The student's case may be referred to an external agency for further action (this could include the filing of criminal charges).

V. Formal Hearing by the University Disciplinary Committee

The University Disciplinary Committee will deal with alleged violations in a manner that ensures that those charged with a violation understand the charge and the evidence against them and are afforded a reasonable right of rebuttal.

The University Disciplinary Committee shall inform the student of the charge in writing. Evidence shall be presented in the presence of the student who shall have a reasonable right of rebuttal including the right to cross-examine witnesses. In determining penalties, the committee may take into consideration the student's cumulative discipline record.

VI. Appeal Procedure

Any student who is charged with a disciplinary offense has the right to a full and fair hearing for any disciplinary charges brought against him or her under university regulations.

If any of the following apply, a student may appeal to the Dean of the faculty or school regarding faculty or departmental decisions, or to the University Disciplinary Committee against disciplinary action taken by the Dean of Student Affairs or the dean of the faculty or school to which the student belongs:

1. Procedural error
2. New evidence
3. Unsupported conclusion
4. Disproportionate sanctions

The outcome of this appeal may result in higher, lower, identical, or no sanctions at all being imposed. The University Disciplinary Committee's decision shall be final.

Students Rights and Responsibilities

Students are members of the academic community and are also citizens. As citizens, students enjoy the same freedom of speech and right to petition that all citizens enjoy. Students have the responsibility to know and obey Lebanese law and the laws of the University. It is the responsibility of the student to know institutional regulations, policies, and established guidelines as stated in this handbook and in the University Catalogue. Students are accountable for their behavior at all times. Students have the right to freedom from discrimination on the basis of race, color, religion, sex, and age. Students have the right to be informed, in writing, of the expected behaviors and standards by which they will be evaluated prior to participating in classrooms and clinical activities. Students have the right to academic evaluations which are not prejudiced and which are based on stated course requirements. As members of the academic community, students are free, individually or collectively, to voice constructive criticism through identified channels on issues of institutional policy, curriculum, and matters of general interest to the student body without fear of reprisal.

While under the direct supervision of an instructor, students also have the right to adequate safety precautions provided by the School of Nursing. Students also have the right to negotiate participation in clinical situations which they feel are threatening to their personal health or life. Students, individually or collectively, have the right to expect, within a reasonable length of time, feedback concerning all student related issues presented to the faculty.

Freedom in the Classroom

Students are responsible for the content of the courses in which they enroll. They are also free to take reasoned exception to the data or views offered in any course of study, and reserve judgment about matters of opinion.
Students are responsible for complying with standards of academic performance required by each course in which they are enrolled. Such standards shall be communicated clearly in writing on or before the first meeting of each course. Students should have protection against prejudiced, arbitrary, and capricious academic evaluation.

Student Representation on Rafic Hariri School of Nursing Committees

Student representation on Rafic Hariri School of Nursing committees is encouraged. Students can request that items be placed on the agenda of any School of Nursing committee for discussion.

UNIVERSITY SERVICES

Student Services at the Rafic Hariri School of Nursing

Getting in Touch with the Right People at the Rafic Hariri School of Nursing

Students are encouraged to communicate any concerns they might have to the appropriate persons. They can refer to the Student Services Officer for the following issues:

- Answering queries about the BSN and MSN programs
- Student orientation and advising
- Follow up on different awards and scholarships available to nursing students
- Problems in registration (opening capacity, removing restrictions, resolving time conflict problems, removing holds, selection of elective courses, drop and add courses)
- Dealing with the administrative body (Registrar's office, Office of Financial Aid, Office of Student Affairs and specific committees at HSON)
- Writing and submitting petition letters (underload/overload credits, late registration, medical reports, course withdrawal, reactivation and readmission etc.)
- Selection of specific academic forms for internal and external procedures
- Program evaluation and satisfaction surveys
- Career guidance and work opportunities
- Student related activities such as student elections, NSS activities and graduation parties etc.
- Requesting credentials after their graduation.

The Student services office seeks to assist and guide nursing students to develop their plan to academic success, by referring them to the appropriate resources and procedures, and ensuring that they are complying with AUB academic rules and regulations.

Issues related to a particular course are best discussed with the course coordinator. Problems with a student's academic progress should be followed up with the assigned advisor. Students may discuss issues related to a particular class with their advisers. There is one class advisor for each of the three years: BSN II, BSN III, and BSN IV. If the student cannot resolve problems with the course coordinator, adviser, or class adviser, he/she should talk to the BSN coordinator, and then the BSN convener. If necessary, issues are referred to the Director of the School.

Other services offered at HSON:

- Requesting lockers at the locker room
- Requesting badges
- Requesting name pins
- Completing the Clearance process upon graduation or withdrawal from the university
- Facilitating colloquium papers

Simulation and Clinical Competency Center (SCCC)

The Simulation and Clinical Competency Center (SCCC) was established by the Hariri School of Nursing in 2009 to assist AUB students, faculty and healthcare practitioners to achieve higher levels of competence and safer patient-care. Individual students use the Lab facility for self-appraisal; faculty uses it for evaluation purposes and our hospital partners (AUBMC) use it to

enhance clinical practice.

Introduction to Simulation

Simulation started with the aviation industry and it improved pilot performance and airline safety. Simulation is defined as the deliberate creation or imitation of a situation for the purpose of learning using different techniques and technologies.

Simulation in healthcare education is considered an effective tool in clinical teaching. Simulation has the potential to provide immersive, interactive, reflective team-learning experiences in a controlled environment. In simulated environment students learn practical skills (e.g., medication injection), communication skills (obtaining patient history) to critical thinking and decision making skills regarding the care of the simulated patient. The tools of simulation range from single body part, as an arm for injection, to full-body mannequin that are physiologically responsive, to actual people playing the patient's role.

Who Uses SCCC Lab?

- AUB students from nursing, medicine, pharmacy and other health related disciplines
- AUBMC practitioners from all disciplines
- Non-AUB health-care students and practitioners after securing a special permission

Why Use Simulation?

- Safe learning environment: Simulation presents a safe learning experience for healthcare students and practitioners (It is a safe place to make mistakes and learn from them - the patient can't be harmed!)
- Increase in skill development: Simulation offers a chance to practice a skill repeatedly until mastery (with or without instructor guidance)
- Builds effective healthcare teams: Simulation brings people from different healthcare disciplines to work together as a team- a requirement for safe patient care

Location and Hours of Operation

Located on the 2nd floor of the Hariri School of Nursing, the SCCC is composed of 5 spacious rooms which can be used for classrooms, skills training and physical assessment. One room is designated for high fidelity scenarios (houses the highly interactive manikin) and includes a control area and a debriefing space.

The SCCC is open Monday to Friday from 8 am to 5pm during the academic year.

Booking Ahead Of Time

All are urged to book the Lab ahead of time. Priority in booking the SCCC is given to educational programs for AUB nursing and medical students. To schedule a session at the Lab, the student/learner must send an email to the Lab coordinator (Randa Farha rf37@aub.edu.lb). The coordinator in turn will confirm by email based on Lab availability. Any changes to an existing request for a session at the SCCC must be submitted by email to the Lab coordinator.

Code of Conduct

The following are binding practices for everyone using the SCCC facility (faculty, clinical teachers and students):

- No food or drink is allowed at any time in the Lab.
- No personal items are to be placed on the beds.
- Wash hands before coming to the center – use available alcohol-based hand sanitizers.
- Sign in at all times for both practice and testing on the attendance sheet
- Treat manikins like people. Treat simulators with respect as if they were real patients- handle them gently and with care.

- Only manikin lubricant can be used on the simulators when inserting objects (e.g. catheters).
- Never use ink pens at the bedsides as ink permanently stains the manikins. Please use pencil or only write at the tables at the end of the bed
- Gloves must be worn when coming in contact with the simulators (SimMan, SimBaby and NOELLE).
- Leave the center in the same condition it was when you first started (place all the chairs back at the tables, make the bed and return all equipment and supplies to the area where found).
- Sign a confidentiality agreement not to disclose any of the proceedings of a scenario outside the Lab. Report any violation to faculty.

Definitions

Effective simulation-based learning experiences are structured to include a pre-brief and a debrief component. The following are important definitions to learn:

PRE-BRIEF FOR A SIMULATION

Pre-brief is defined as an orientation session held prior to the start of a simulation-based learning experience in which instruction or preparatory information is given to the participants. It is the foundation of a successful simulation learning experience.

DEBRIEFING AFTER SIMULATION

Debriefing is the discussion that immediately follows a simulation-based experience. It is facilitated by an educator who observes the simulated experience. The discussion fit participants' objectives and outcomes of the simulation-based learning experience. Debriefing aims to promote reflective thinking. True learning occurs through a process of self-reflection. Effective debriefing is conducted in an environment that is conducive to learning and supports confidentiality, trust, open communication, self-analysis, and reflection.

University Libraries

The AUB library system consists of two main libraries: the University Libraries and Saab Memorial Medical Library.
The University Libraries include the Jafet Memorial Library (the Central Library) and two branch libraries: the Engineering and Architecture Library, and the Science and Agriculture Library with its annex AREC (Farm) Library.

The University Libraries are currently open 90 hours per week. The schedules of the libraries differ. Refer to the AUB website, click on libraries, in order to know the opening hours. Librarians also send regular emails regarding changes in their operating hours in the various semesters and during holidays. All libraries have photocopying machines that are available for student use. A card containing 100 photocopying units may be bought for 5, 000 LL in vending machines located in each library. Photocopying is also offered at the University Book Store for a small fee.

The Saab Medical Library (SML) is probably the one you will be using the most. The SML collection consists of 1,200 printed periodical subscriptions; over 82,320 back file periodical volumes, nearly 42,000 books, and nearly 2,300 audio-visual items, including computer

software. SML has a large number of the most important bibliographic medical and allied health databases, and more than 2,500 electronic journals. SML is accessible through the internet at http://www.aub.edu.lb/libraries/medical. The library has a special collection called the Lebanese Corner, http://192.168.100.187/, which includes publications about Lebanon or by Lebanese authors in the fields of medicine and other health-related topics. Databases are currently accessible via the AUB website.

Computing and Networking Services

Computing and Networking Services (CNS) provides access to different services that require user authentication. Before using the service, you must activate your **AUBnet account**: The AUB net account provides e-mail, intranet, and Internet access, in addition to other services such as roaming storage space, network printing, and personal web site space. You must activate your AUB net account before you can activate other accounts.

The **AUBsis account** provides access to the AUB Student Information System, a web-based application designed to provide the following on-line services to students and faculty: On-line Registration, Drop and Add, Class Schedules, Grades, Student Transcripts, Address Information, and Billing Statements.

Student computer labs are located throughout the University, including the libraries, faculty of medicine and faculty of health sciences buildings, among others.

An Internet fee of 300, 000 LL is charged every year and will automatically be added to the statement of fees. The quota of Internet data per month per student is 100MB. This is a combined quota of web and e-mail data. Through the AUB Net Resources web site you can find out your Internet data usage for the month. No limit exists on the time spent browsing and sending information on the web. The limit is only on the volume of data that is sent/received in the process.

Access to computer hardware, software, intranet, and the Internet services is provided to students for enhancing their learning. Access to the use of AUB computer facilities is through authorized computer accounts. Students must abide by the AUBnet Code of Conduct for Users of Computing System and Internet Services.

A computer account consists of a unique log-in ID and a password. Your log-in ID tells the computer system who you are. You must always keep your password secret. To activate your AUB computing accounts go to http://www.aub.edu.lb, select ”Get your AUB Computing Account,” and follow the instructions.

Student E-mail Address

To ensure that students receive timely communication and important announcements, the student’s current email address must always be on file in the School of Nursing. Every student is provided with an e-mail address. It is strongly recommended that all students use their AUB e-mail address as their primary one for the duration of the time they are studying here, to avoid missing announcements or other important communication from faculty and staff. We suggest that you get an email account during orientation week and check your email once per day.

The Writing Center

For students who need assistance in writing papers or projects, the AUB writing center located in West Hall Room 307 provides assistance. Tutors from the Department of English are available Monday through Friday 9 am – 3 pm and consulting services are free. The extension to call for taking appointments is 3157.

The Counseling Center

Adjusting to university life may be difficult for some students. For students who experience personal difficulties that lead to anxiety, depression or other psychological problems, the counseling center can provide assistance. The counseling team can assist with study related issues such as exam anxiety and time management, Counseling is free and confidential. The center is located in West Hall Room 206. The extension to call is 3196 or 3178.

Bookstore

The University Bookstore is located at the back of Bliss Hall across from Penrose Hall. It stocks most of the required textbooks for specific courses, dictionaries, and other reference works, and a limited number of general publications. Assorted AUB items and gifts such as clocks, mugs, T-shirts, and binders are also available.

Mail Service

The University Post Office, located in the basement of Ada Dodge Hall, handles local campus mail and mail for the Lebanese postal services. To secure a campus mailbox a student must show a receipt of fee payment at the AUB Post Office. Urgent mail may be sent by Aramex through the AUB Post Office. A special rate is offered to the AUB community. Also DHL offers special rates at the AUB Bookstore.

Food Service

The University operates a modern, cafeteria-style food service on campus in Ada Dodge Hall. In addition to the main cafeteria the University also maintains the Mary Dodge Hall Cafeteria, the Engineering Cafeteria, and the Agriculture Kiosk. These facilities provide a variety of hot and cold refreshments for students and their guests. Vending machines are available in a number of university buildings.

Students Housing

AUB is a residential university. For more information, check the AUB Catalogue, or check the Student affairs Office website at: http://staff.aub.edu.lb/~websao/house/.

Student Transportation

AUB allows very limited automobile access to campus: only students suffering from illness or disabilities may bring cars on campus. Authorization from the Infirmary must be received before a permit can be issued. Students should contact Business Services at extension 3510 for a special permit.

Students with Disabilities

Students with disabilities applying to AUB are strongly encouraged to make their disability known to the Admission Office. This information will not affect the decision on admission; rather, it will give the University the opportunity to offer specific assistance and support through programs and services provided by different departments on campus. Students need to consult with their advisers for assistance.

UNIVERSITY HEALTH SERVICES

Medical Record

An entrance medical record form will be sent to all admitted students who have made the commitment to enroll at AUB. The form should be completed by the student's family physician and mailed before the period of registration. Alternatively the completed form may be delivered by hand to the Office of Admissions.

All new students must have a tuberculin test at the time of the preliminary medical check, held during registration, and must report 48 hours later for the check on the test. Upon clearing the medical test, the student will be issued a clearance slip to proceed with registration. Students will not be registered unless they obtain this clearance slip. Medical checks may be completed in advance of registration provided that the student reports to the University Health Services on campus and brings along a letter of acceptance and the entrance medical record.

Returning students are not required to complete any medical forms. Important changes in the student's medical condition and/or updating immunizations should be reported to a University Physician by appointment at the Health Services Center. Information will be kept confidential.

All nursing students are required to go check on their Hepatitis B status, prior to commencing clinical..

The University Health Services (UHS) provide medical care to members of the university community in Sawaf Building at the following office hours:

Office hours: Monday through Friday

- **Offices** 8:00 a.m. - 5:00 p.m.
- **Clinics** 8:00 a.m. - 7:00 p.m.

Office hours: Saturday

- **Clinics** 10:00 a.m. - 2:00 p.m.

The Sawaf building is located near the AUB Medical Center. Appointments can be made at the reception desk. A physician is also available to receive patients on a walk-in basis. Walk-in patients must have problems of an urgent nature; otherwise, they will be given appointments for a later time. In case of emergency, the patient should report directly to the Emergency Unit at the AUB Medical Center or to the nearest Emergency Service.

Health Insurance Plan (HIP)

Students may elect to enroll in the University's Health Insurance Plan (HIP), provided they register for at least six credit hours. Students enrolled in the spring semester are covered until September 30, provided they do not leave the University or drop all of their courses. A married student will have the option of including his/her spouse and children for an additional fee. A student may be exempt from enrolling in HIP if he/she presents proof of coverage by another health insurance plan. HIP covers only those expenses incurred at the AUB Medical Center. Medical bills from other institutions are not covered.

National Social Security Fund (NSSF) Medical Branch

Membership in the NSSF is mandatory by law for all Lebanese students, excluding freshman and special students, and students who are older than 30 years. Non-Lebanese students may not join NSSF. To facilitate enrollment in the NSSF Medical Branch, students are required to bring the following items when registering:

- A social security application form filled in correctly. Copies of this form will be available for distribution at the time of registration to students.
- A photocopy of the Lebanese Identity Card.
- Their NSSF number if already registered.
- The NSSF number of either parent if insured with the NSSF through father or mother.

STUDENT EXTRACURRICULAR ACTIVITIES

Clubs and Societies

Opportunities for students to participate in extra-curricular activities, generally organized under the auspices of student-governed societies or clubs, are numerous at AUB. Membership is open to all registered students upon completion of a membership application and payment of a nominal fee. Almost all student clubs provide an outlet for artistic expression: Art, Music, Photography, and Poetry Clubs. For further information or to obtain a list of active clubs and societies, go to the Office of Student Activities in West Hall, extension 3182.

Nursing Student Society

The Nursing Student Society (NSS) brings together nursing students from all levels to engage in various professional and social activities, under the guidance of an assigned faculty advisor. Objectives of the NSS are to:

- Serve as an organization through which matters related to the welfare of students and the school is transacted.
- Provide a channel for coordination of activities between the students and faculty members, and with other student organizations.
- Organize activities that promote a spirit of loyalty and fellowship among the student body.
- Provide means for active participation in activities that foster the personal, professional and civic development of students.

The NSS has three standing committees:

1. The Educational Committee organizes educational programs of interest to the community.
2. The Social Committee is responsible for social and recreational activities.
3. The Publicity and Finance Committee is responsible for publicity and financial matters.

Athletics and Recreation

The University offers a wide range of sports, athletic and recreational programs through its Athletics Department. Facilities include AUB's Green Field, which hosts international, national, and varsity sports tournaments. The Green Field includes the University's soccer field, lighted outdoor basketball courts, lighted outdoor volleyball courts, and a lighted 450-meter track.

IMPORTANT TELEPHONE NUMBERS

Finally, here are some helpful telephone numbers for you to have:

Clubs and Student Activities (West Hall)	3182
Emergency Room	6604
Financial Aid	3160
Housing	3175
Infirmary, University Health Services	3000
Registrar	2570
Student Affairs	3170
School of Nursing	5950, 5951

Appendix A

Clinical Practicum Orientation Tips

These are simple "tricks" for a good clinical experience

- **Punctuality:** Be 15 minutes early to the rotation. Have a good breakfast before coming.
- **Preparation:** Make sure you have all the equipment you need and that you reviewed your notes very well ahead of time.
- **Dress Code:** Wear clean shoes and clothes, shave, everyone will respect you when you dress well and act in a professional way.
- **Caring:** Make a special time to go to the patient's room and discuss their condition.
- **Self Learner:** Be interested to learn more, ask whatever question that pops to your head, and just enjoy the learning experience.
- **Professionalism:** Maintain a positive relationship with your preceptor, your fellow students and health care team.
- **Safety:** Assure your own safety. Ensure you have completed your HBV. HAND HYGINE IS VERY IMPORTANT KEEP IT IN MIND.

Appendix E

Title:	Dress Code: Nursing Staff and Nursing Students	Index Number:	GLD-NSG-001 (Func.- Categ.-Sr. No.)	
Scope of application:	All Nursing Staff and Nursing Students	Original Date: 22.5.2006	Reviewed on: 31.01.2019	Next Review: 31.01.2022

1. *Policy*

1.1. All nursing staff, nursing students and unit clerks shall abide by the Nursing Services policy on Dress Code.

1.2. The nursing staff and Floor Clerks shall abide by the standard uniforms provided by the Nursing Administration.

2. *Purpose*

2.1. To define the standards of dress code for nursing staff.

2.2. To ensure professional appearance of all nursing staff.

2.3. To prevent the spread of infections and promote safety of patients, visitors, and staff.

3. *Procedure*

3.1. Nursing uniforms shall be neat, clean, wrinkle free and in good shape.
- 3.1.1. Veils shall be light in color and tucked inside the uniform at all times.
- 3.1.2. Pants shall be loose fitting.
- 3.1.3. Navy blue, black, or white jackets may be worn over the uniform.
- 3.1.4. Male nurses shall wear a white T shirt under their top.

3.2. All nursing staff shall wear the identification badges/name pins at all times. ID badges shall be visible and worn above the waist (Multidisciplinary Policies and Procedures Manual, Identification Badges, GLD-ADM-001).

3.3. Light jewelry (such as a small necklace) shall be appropriate and not causing safety hazards or hindrances while working.
- 3.3.1. Necklaces or chains with religious connotations shall be discreet.
- 3.3.2. Earrings must be professional in appearance, and appropriate in the clinical area.
- 3.3.3. Tattoos shall not be apparent.

3.4. Hair shall be clean, well-groomed and tidy. In clinical environment long hair shall be tied back.

3.5. Make up shall be discreet. Perfume shall be light.

3.6. Nails shall be sufficiently short to ensure safe patient contact and good hand hygiene. No False finger nails of any type, including acrylic, gels or wraps.

3.7. Male nurses shall be well shaved.

3.8. Shoes shall be clean, simple, closed, comfortable and noiseless. Non-perforated clogs are permitted only in OR.

3.9. A clean white lab coat shall be worn over professional attire for all nursing staff who are not involved in direct patient care. Staff shall dress in a professional manner for work. Casual clothes are not allowed (e.g. Jeans, T-Shirt and open shoes are not acceptable)

3.10. All Staff shall maintain a high level of personal hygiene and appearance.

3.11. Staff who need to wear special medical shoes due to a physical disability or medical reason shall submit a written medical recommendation to the nursing administration. Final approval shall be at the discretion of the Nursing administration.

3.12. Staff shall not go outside the hospital campus wearing their unit-specific nursing uniforms.

3.13. Staff shall change their uniform in case they become dirty or soiled.

3.14. In Critical Care Units, the following shall be enforced:
- 3.14.1. Bare Below the elbows: Nursing and medical staff shall wear their scrub suits (short sleeves), no wristwatches, no jewelry, and no ties during clinical practice.
- 3.14.2. White Coats: Nurses shall remove their white coats prior to contact with patients or the patient's immediate environment.
- 3.14.3. Ties, long veils, scarves and other items of clothing shall not be allowed to dangle down, they must be tucked inside the scrub suit.

4. *Responsibilities*

4.1. All management team shall enforce dress code policy under their jurisdiction:
- 4.1.1. Ist offence – verbal warning.
- 4.1.2. 2nd offence – verbal warning and sent home to change.
- 4.1.3. 3rd offence – written warning in the personnel file.

WELCOME

Welcome to the Rafic Hariri Hariri School of Nursing (HSON). We are delighted that you have chosen to study nursing at AUB and look forward to meeting each one of you. This is an exciting time for nursing—both at AUB and throughout the world.

In the field of nursing generally, nurses are taking on new and greater responsibilities. Although taking care of patients is still our primary responsibility, we are also playing a role in setting health care policy at the national, regional, and international levels and researching important health care issues.

Here at AUB, we celebrated our 100th anniversary in 2005 and our 110th anniversary in 2015. We have introduced new programs and are constantly updating and revising our curriculum. Our graduates are in great demand and they are occupying leadership positions in different countries in the world. In 2007 the BSN and MSN programs were granted unconditional accreditation by the Commission on Collegiate Nursing Education (CCNE) in the USA for five years and in 2012 the programs were reaccredited for a period of 10 years. AUB Hariri School of Nursing is the first school to be accredited by CCNE outside the USA. In 2008 the HSON received a $10M gift to endow the school and the building and in 2009 the Rafic Hariri School of Nursing building was inaugurated. The building houses faculty offices, classrooms, an auditorium, a computer lab, skills and simulation lab, a research center, and student facilities.

In 2015, HSON won three major regional awards; HSON received the best institution award, Dr. Huda Huijer the distinguished researcher award, and an MSN graduate the best thesis award. The Chi Iota Honor Society Chapter, the first in the region, was formally chartered by Sigma Theta Tau International (STTI) in 2015 and 131 members were inducted into this prestigious honor society. In 2017, the PhD in Nursing Science program was fully approved to be formally launched in 2018-19. In 2018, AUB granted HSON independent Faculty status and appointed Dr. Huijer as founding dean of the school. We continue to be proud of these accomplishments and we look forward to working with you to celebrate these achievements.
We hope this handbook will be a useful guide for you especially during the first couple of weeks when everything is so unfamiliar. If, however, you are lost or need help, please come and find us. We are eager to do whatever we can to make this a positive and rewarding experience for you.

We also welcome any comments or suggestions you may have on how we might change and improve on this handbook in order to make it more helpful for future Hariri School of Nursing students.

Good luck!

Dr. Huda Abu-Saad Huijer, RN, PhD, FEANS, FAAN
Director, Hariri School of Nursing

1. Ms. Randa Farha (Chair)
2. Mrs. Talin Gulgulian (co-chair)
3. Mrs. May Khoury
4. Mrs. Lynn Berbary
5. Mrs. Silva Dakessian
6. Mrs. Danielle Damianos
7. Dr. Ghada Assaf

HSON Selection committee for MCF scholars:

1. Dr. Samar Noureddine (or a delegate)
2. Ms. Nisrine Ghalayini

PREFACE

This handbook has been prepared for undergraduate nursing students to provide detailed information about the Bachelor of Science in Nursing (BSN) program at the American University of Beirut (AUB). The handbook includes guidelines to facilitate the student's progress in the program from admission through graduation.

The faculty and administration of the Hariri School of Nursing hope that the educational experience at AUB will be a rewarding and challenging experience for each student. We are here to assist students to reach their professional and educational goals.

In addition to the policies found in this handbook that are specific to the undergraduate program at the School of Nursing, the student should obtain and keep a copy of the AUB Catalogue, which contains policies and procedures that apply to all undergraduate programs in the University. We urge you to consult the catalogue and this handbook often. If you have any questions or are unsure of a particular policy, please contact the BSN Coordinator who is available to assist you.

GENERAL INFORMATION ABOUT THE SCHOOL OF NURSING

Historical Background

The School of Nursing, founded in 1905, was the first nursing school in the Middle East. The five–year Bachelor of Science in Nursing program, established in 1936, was replaced in 1964 by a four–year program leading to the degree of Bachelor of Science in Nursing. Students entering the school as sophomores graduate in three calendar years. The RN-BSN program was reactivated and launched in 2003. The Masters of Science in Nursing (MSN) program was launched in 2003. The Bachelor of Science in Nursing program (BSN) and the MSN program are registered by the Department of Education of New York State, HEGIS codes 1203.00 and 1203.10, respectively. The BSN and MSN programs are accredited by CCNE, the Commission on Collegiate Nursing Education, in the USA. The AUB School of Nursing is the first School of Nursing outside the US territories to be accredited by CCNE.

Mission

The mission of the School of Nursing is to promote and maintain the highest educational standards of excellence, integrity, and professionalism in nursing, following the American model of nursing education and practice. The school aims to provide learning opportunities that will enable students to develop into competent nurses who respect cultural diversity while coordinating and delivering high–quality, compassionate nursing care in Lebanon and beyond, guided by ethical principles. The faculty believes education is an interactive process between faculty and students with both taking responsibility for active learning. The baccalaureate program, drawn primarily from the humanities, sciences, and caring disciplines, focuses on the use of nursing theory and research as a basis for practice. The master's program focuses on preparing nurses for advanced nursing practice roles, and is based on the use and generation of research–based knowledge to guide practice. Nursing students at AUB learn to think critically, develop professional attitudes and leadership skills, and appreciate the value of life–long learning and freedom of speech

Programs

Undergraduate Programs:

» Bachelor of Science in Nursing (BSN)
» Registered Nurse-Bachelor of Science in Nursing (RN-BSN)
» Bachelor of Science-Bachelor of Science in Nursing (BS-BSN)

Graduate Programs:

Master of Science in Nursing (MSN)
MSN students can specialize in one of four areas:

1- Adult Gerontology Clinical Nurse Specialist
2- Psychiatric Mental Health Clinical Nurse Specialist
3- Nursing Administration and Management
4- Community and Public Health Nursing

Undergraduate Program Outline

Admission

Students holding diplomas from a 12–year secondary school may gain admission to the School of Nursing as first year nursing students (see page 38 for required courses at the freshman level). Freshman students wishing to transfer to the School of Nursing from AUB or another institution may gain admission provided they complete the required freshman courses.

Bachelor of Science in Nursing (BSN)

The School of Nursing follows the admission policies and criteria of the University.

RN–BSN Program

The curriculum is designed to permit the graduates of a technical program in nursing to pursue the degree of Bachelor of Science in Nursing provided the university entrance requirements are met. The time limit for completion of the program should not exceed six calendar years. A selected number of nursing courses may be validated if applicable.

Preferred requirement for admission to the program is three years experience in addition to the English Entrance Exam. The candidate may be asked to interview with the school's director and/or program convener.

According to the decree no. 855 dated 01/07/2015, issued by the Ministry of Education and Higher Education, holders of the technical baccalaureate (BT) are only eligible for admission to the same major as that of BT. In this case, holders of BT applying to the BSN program should complete the following remedial/pre-requisite freshman level courses prior to the BSN II year:

- 3 credits in Mathematics (MATH 101 or 102)
- 3 credits in Chemistry (CHEM-101)
- 3 credits in Biology (BIOL-101)
- 3 credits in Physics (PHYS-101, 103 or 200)

BS/BA-BSN Accelerated Program

The School of Nursing accelerated program is designed for individuals who have a BS/BA in fields other than nursing. The streamlined curriculum permits students to earn a BSN in 24 months. Students who graduate from this program are entitled to sit for the National Colloquium Exam to become registered nurses. The admission to the BS/BA-BSN program requires the following:

BS/BA degree in a field other than nursing
A minimum GPA of 75 including prerequisite courses and general education requirements
Completion of the following prerequisite courses prior to admission: ENGL 204, PSYC 201, Biostatistics course, PSYC 210, SOAN 201, and four elective courses

THE BSN DEGREE REQUIREMENTS

A student has a maximum of six (6) years to complete an undergraduate degree at AUB, if he/she enrolls as a sophomore student. You must complete all requirements for the BSN degree in order to participate in graduation activities.

Graduation Requirements

All recommendations for graduation are made by vote of the faculty, upon the recommendation of the academic committee.
To be eligible for graduation with the degree of Bachelor of Science in Nursing, the following requirements must be met:

- Completion of the prescribed program of study with a minimum of 103 credits after the freshman class or equivalent, 100 credits for those entering at English 204, 91 credits for those entering as registered nurses
- An overall average of 70, excluding freshman courses.

The maximum time allowed for the completion of the degree program should be within the following specified periods:

BSN II	six calendar years
BSN III	four calendar years
BSN IV	two calendar years

Students must petition the academic committee for an extension of time if needed.
All undergraduate transfer students from AUB or from other recognized institutions of higher learning to the School of Nursing need to complete the required prerequisites and all required nursing courses. A minimum residency period of one year or 30 credits for within AUB transfers and 45 credits for transfers from outside must be completed at AUB.
Course credits pertinent to the nursing curriculum may be transferred according to criteria set by the admission and academic committees.

BSN PROGRAM OUTCOMES

I. Integrate knowledge from the arts, humanities, fundamental and basic medical sciences, and nursing theory in professional practice.
II. Demonstrate competency in clinical skills and critical thinking.

III. Utilize current research knowledge related to health promotion and maintenance, illness prevention and restoration of health of individuals, families and groups with diverse cultural backgrounds.
IV. Demonstrate leadership skills in the care management of clients in different health settings based on current health care policy.
V. Collaborate with other health providers to promote the well being of individuals.
VI. Demonstrate responsibility, accountability, and continued professional development.
VII. Participate in professional and community organizations for the promotion of the nursing profession in Lebanon and the region.
VIII. Demonstrate effective use of personal, interpersonal and group communication skills in practice.
IX. Espouse principles of professional ethics and personal integrity in nursing practice.

In order to achieve the BSN program outcomes upon graduation, the student is expected to achieve at the end of each class certain learning outcomes, called level outcomes).

BSN Student Outcomes		
BSN II (Sophomore Year)	**BSN III (Junior Year)**	**BSN IV (Senior Year)**
Upon completion of the sophomore year the student shall be able to: A. Demonstrate beginning skills in effective communication B. Identify healthcare needs of clients based on assessment of physical, psychological, and social parameters C. Identify developmental milestones in relation to the health-illness continuum D. Provide basic nursing care based on the nursing process E. Demonstrate skills in searching the nursing literature F. Identify ethical principles that govern the nursing profession	Upon completion of the junior year the student shall be able to: A. Utilize the nursing process in planning the care of the clients along the health-illness continuum B. Provide comprehensive/holistic care to individual clients across the life span C. Integrate theoretical knowledge from the social and basic sciences with that of nursing as a basis for practice D. Appreciate the use of research in nursing practice (assessment and intervention) E. Demonstrate therapeutic communication skills with clients F. Demonstrate ability to work in groups G. Identify ethical principles that govern nursing practice H. Demonstrate responsibility and accountability for personal and professional growth	Upon completion of the senior year the student shall be able to: A. Utilize appropriate theories and research findings from nursing and related fields in nursing practice B. Evaluate systematically the outcomes of care in a variety of settings based on the nursing process C. Apply knowledge of group dynamics while working with groups of clients, healthcare professionals and co-workers D. Demonstrate leadership skills in planning, managing, and evaluating care of clients E. Demonstrate responsibility and accountability to individuals, families, society at large, and personal professional growth and development F. Determine ethical, social, and political issues affecting the healthcare system in Lebanon

CURRICULUM AND COURSE REQUIREMENTS

The BSN curriculum totals 103 credits for students entering as sophomores and includes two summers of study. Students take courses in English, the Arts and Sciences, basic medical sciences, and nursing. Nursing courses include classroom teaching and clinical training in health-care settings. 12 credits electives in humanities that meet the general education requirement are required for graduation. Students will be asked to take half of the elective humanities from LIST I, and the other half from either lists I or II (check list of courses under GE section). The table below shows the curriculum plan, starting with the Freshman year

Freshman Courses:

- Natural Sciences: BIOL 105 or 106; CHEM. 102; GEOL 101, 102, or 103; PHYS 101, 103, or 200.
- Social Sciences: ECON 103; PSPA 101
- Humanities: ARAB 101 or 102; AROL 101; CVSP 110, 111, 112, or 150; ENGL 103, 104, 105, 106, 107, or 108; HIST 101 or 102; PHIL 101 or 102

⁂ Electives as necessary to add up to 30 credits in total

⁂ ◈ For Arabic speaking students; for others credits have to be replaced by an elective

GE Refer to List of courses & requirements under General Education section

Students will be asked to take half of the humanities and social sciences requirements from LIST I, and the other half from either lists I or II (check list of courses under GE section)

*Passing grade for NURS 203 is **60**

**Offered either fall or spring semester in the senior year

***Offered either fall or spring semester in the senior year

Students can take EDUC 225 instead of PSYC 210. EDUC 225 does not require any prerequisite.

Updated Sept. 2018

Course Descriptions

Nursing courses are numbered according to level and normally follow a sequence. Below is a list of all undergraduate nursing courses. To the right of the course title is a set of 3 numbers that indicate the following:

- The first number following the title of a course indicates the number of class hours per week.
- The second number indicates the number of clinical hours per week. (Please note that not all courses include clinical hours.)
- The third number indicates the number of credit hours applied toward graduation.

NURS 200 Introduction to Nursing 2.0; 2 cr.
Introduces concepts basic to the nursing profession. The nature of nursing as a profession, past, present, and future, is studied with a focus on the role of nurses in meeting the health needs of humanity throughout the health–illness continuum. *Fall and spring.*

NURS 201 Introduction to Nursing Practice 1.3; 2 cr.
This course introduces students to concepts and interventions basic to nursing practice. The course uses the nursing process as the organizing framework, and the concepts of health, nursing, client, and environment are integrated throughout. Performance of basic client care skills are emphasized, including the scientific rationale for both health promoting and health restoring nursing interventions. *Prerequisite: NURS 200; corequisite: HUMR 248. Spring.*

NURS 202 Health Assessment 1.3; 2 cr.
The course focuses on assessment of health across the life span and provides the student with the knowledge and skills needed to assess the health status of individuals from infancy to old age. Emphasis is placed on assessment of the physical, psychosocial, and cultural dimensions of the individual. The course includes lectures and practical experiences in the assessment of individuals to identify normal and abnormal findings. *Corequisites: NURS 201 and HUMR 248. Spring.*

NURS 203 Biotatistics for Nurses 3.0; 3 cr.
This course is designed to introduce the BSN students to the concepts and applications of statistics in the nursing field. The course starts with a general overview of probability, types of data, and ways to summarize and present them. The course then introduces the concept of hypothesis testing and the methods to carry them. Applications on the computer using the SPSS software will be discussed in class. *Summer.*

NURS 205 Foundation of Professional Nursing 2.0; 2 cr.
In this course students will explore recent issues affecting the nursing profession in terms of role expansion of the nurse. The nursing process is covered as an organizing framework for nursing practice.

NURS 210 Pathophysiology 2.0; 2 cr.
This course focuses on the biologic alterations that affect body dynamic equilibrium or homeostasis. The content of this course is organized into three areas of focus based on the health–illness continuum: 1) control of normal body function 2) pathophysiology or alteration in body function 3) system or organ failure. *Prerequisites: BIOC 246, HUMR 248, and MBIM 237. Summer.*

NURS 300 Nursing Care of Adults I, Theory and Practicum 2.8; 5 cr.
This course covers scientific principles in the care of adults presenting with medical-surgical problems. It builds on the framework of man, environment, health and nursing. The practicum provides students with opportunities to apply knowledge in clinical practice. *Prerequisites: NURS 202 and NURS 210; corequisite: PHRM 240. Fall.*

NURS 302 Nursing Care of Adults II, Theory and Practicum 2.8; 5 cr.
This course is a continuation of NURS 300. Emphasis is placed on the following dysfunctions: metabolic and endocrine, neurologic, eye ear nose and throat, renal and urinary, integumentary, hepatic and biliary, rheumatic, as well as the infectious process. *Prerequisites: PHRM 240 and NURS 300. Spring.*

NURS 304 Nursing Care of the Expectant Family, Theory and Practicum 2.8; 5 cr.
This course focuses on reproductive health, from conception to the neonatal period. The content stresses the nurse's role in reproductive health and risk management. The practicum provides clinical application of knowledge, focusing on women in the childbearing cycle, the newborn, and families as clients in the hospital and outpatient settings. *Prerequisites: NURS 202 and NURS 210; corequisite: PHRM 240. Fall.*

NURS 306 Nursing Care of Children, Theory and Practicum 2.8; 5 cr.
This course focuses on the care of children, from infancy through adolescence. Topics include ambulatory and in-patient care, as well as primary, secondary and tertiary care. The practicum provides the students with opportunities to assess health needs of children based on knowledge of growth and development, and to implement nursing care, based on the nursing process. The roles of nurse as teacher, patient advocate and nurturer are emphasized. *Prerequisites: PHRM 240, NURS 304, and PSYC 210. Spring.*

NURS 307 Practicum I 0.6; 0 cr.
This course is designed to provide students with opportunities to practice advanced nursing skills learned in previous nursing courses, and builds on experiences gained in the sophomore and junior years. *Prerequisites: NURS 302, NURS 304, and NURS 306. Summer.*

NURS 308V Maternal Child Nursing, Theory and Practicum 3.8; 6 cr.
This course focuses on the childbearing family from conception to the newborn period as well as primary and tertiary care of the ill child from infancy to adolescence. The clinical component emphasizes the application of knowledge acquired in class in the care of the childbearing family and children with illnesses from infancy to adolescence.

NURS 311V Nursing Care of Adults, Theory and Practicum 3.8; 6 cr.
Facilitates the development of advanced knowledge and application of scientific principles in the care of clients representing medical–surgical problems of the adult population. This course builds on the framework of person, environment, health status, and nursing. The clinical component provides an opportunity for advanced clinical application of concepts discussed in class in the care of patients and their families.

NURS 312 Mental Health and Psychiatric Nursing, Theory and Practicum 2.8; 5 cr.
The holistic philosophy of clients as bio–psycho–social entities is stressed in both mental health and mental illness. General theories of psychiatry and mental health therapies are presented. The course provides clinical experience in psychiatric–mental health settings. Emphasis is placed on the quality of coping abilities of clients in varying degrees of stress and crisis.

Opportunities are provided for students to work collaboratively with multi–disciplinary health teams to assess, plan, and implement relevant nursing interventions in both mental health and illness. *Prerequisites: SOAN 201 and PSYC 201. Fall and spring.*

NURS 313 Leadership and Management in Nursing, Theory and Practicum 3.6; 5 cr.

This course discusses concepts of leadership, management, creativity, analysis, power, change, and evaluation. Students investigate, analyze, and conceptualize the different modalities of leadership, utilizing nursing and management theories. The practicum allows the student to explore his/her role as a potential leader. The learner observes and assists in the practice of different modalities of leadership and managerial skills in a variety of health care settings.

NURS 314 Community Health Nursing, Theory and Practicum 2.8; 5 cr.

The course provides knowledge in the broad area of the field of nursing, public health, and primary health care. The levels of prime concern are the small group, including the family and its individual members, and the large group, including the community. The focus of the clinical component is on the promotion and maintenance of high levels of health and well-being, and prevention of illness and disability. *Fall and spring.*

NURS 400 Critical Care Nursing, Theory and Practicum 2.6; 4 cr.

This course focuses on the care of clients with critical care problems. Emphasis is placed on cardiovascular and respiratory problems, neurologic disturbances, shock, sepsis, metabolic and endocrine imbalances, altered nutrition, renal failure, emergency and disaster nursing. The practicum provides opportunities to apply knowledge in clinical settings. *Prerequisites: NURS 302 and NURS 307. Fall.*

NURS 402 Mental Health and Psychiatric Nursing, Theory and Practicum 2.8; 5 cr.

This course provides the mental health setting for self-awareness and therapeutic use of self in effective communication. The holistic philosophy of clients as bio-psycho-social entities is stressed in both mental health and mental illness. General theories of psychiatry and mental health therapies are presented. The practicum provides clinical experience in psychiatric-mental health settings. Emphasis is placed on the quality of coping abilities of clients in varying degrees of stress and crisis, with experiences in working with multi-disciplinary health teams to assess, plan, and implement relevant nursing interventions. *Prerequisites: Senior standing, SOAN 201, and PSYC 201. Fall and spring.*

NURS 404 Nursing Informatics 2.0; 2 cr.

This course focuses on the history of health care informatics, basic informatics concepts, and health information management applications. The student progresses from developing knowledge of basic concepts and methods of health care informatics; to learning about specific information management applications in health care administration, practice, education, and research; and finally to a hands-on experience with a specific application of his/her own choosing. *Prerequisite: consent of instructor. Fall.*

NURS 405V Critical Care Nursing, Theory and Practicum 2.6; 4 cr.

This course addresses the management of critically ill adults. Emphasis is placed on diagnostic reasoning, interventions, and outcome assessment in patients presenting with complex cardiovascular, respiratory, renal and metabolic problems, as well as trauma. The clinical component provides experiences where students apply concepts learned in class in critical care

areas in the hospital. *Prerequisite: NURS 311V.*

NURS 406 Nursing Research 3.0; 3 cr.
Focuses on the process involved in the scientific approach and its application to nursing. Special emphasis is on the basic research steps, the research design, assessment measures, and data analysis with a focus on research utilization. *Prerequisite: NURS 203. Fall.*

NURS 408 Community Health Nursing, Theory and Practicum 2.8; 5 cr.
This course provides knowledge in the broad field of nursing, public health, and primary health care. The levels of primary concern are the small group, including the family and its individual members, and the large group, including the community. The practicum provides field practice through collaboration with other health professionals in primary care settings, with focus on health promotion, maintenance, and the prevention of illness and disability. *Prerequisite: Senior standing. Fall and spring.*

NURS 410 Leadership and Management in Nursing, Theory and Practicum 3.6; 5 cr.
This course discusses how professional nursing incorporates the concepts of leadership, management, creativity, analysis, power, change, and evaluation. In this course students investigate, analyze, and conceptualize the different modalities of leadership, utilizing nursing and management theories. The practicum allows students to explore their role as potential leaders. Students observe and assist in the practice of different modalities of leadership and managerial skills in a variety of health care settings. *Prerequisite: Senior standing. Spring.*

NURS 411 Intensive Practicum in Area of interest 0.9; 0 cr.
This course focuses on preparing students towards their transition to professional nursing practice. Opportunities are provided for students to synthesize knowledge and refine skills acquired in the planning, provision and evaluation of nursing care, communication, and interdisciplinary practice in a clinical area of their interest. Consent of instructor is required for the site of clinical practice. *Prerequisite: Senior standing. Spring.*

IPEC 300 Interprofessional Education and Collaboration 1.0; 1 cr.
This is a required course for third-year medical, senior undergraduate nursing and Masters of Public Health students, and it aims at demonstrating how population health is best promoted and safe, patient-centered care is best provided through a collaborative health teams approach. The course will be based on cases designed by faculty members belonging to the three aforementioned disciplines, on topics on which inter-professional partnership is necessary. Discussion groups combining students from all three professions will be moderated by faculty members from the three professions. Students will learn the roles and responsibilities of other health professions and how to function in interprofessional teams. *Senior Standing*

ACADEMIC RULES AND REGULATIONS

Categories of Students

Full-Time Students

To be considered a full-time student, a student must carry a minimum load of 12 credits per semester. (Students can register for up to 17 credits per semester.) During the summer session, full-time students are required to take 9 credits. Registering for more than 17 credits (or 9 credits during the summer) requires the approval of the School of Nursing Director.

Part -Time students

These include the following categories:

- AUB staff members who are working toward a degree.
- Those who need to complete less than 12 credits for an undergraduate degree.
- Those who are granted permission by the appropriate faculty committee for health or family reasons to take less than a full course load.

Supervision

Each student will be assigned an academic adviser in his/her first semester who will guide the student on academic matters throughout his years of study. The adviser must be consulted and approve the student's schedule each semester. Students can find out the name of their advisers on the Student Information System (SIS).

Attendance

CLASSES AND LABORATORIES

Students are expected to attend all classes, laboratories, and any other required activities. Absence by students, whether excused or not, from any class or laboratory session does not excuse them from their responsibility for the work done or from any announcements made during their absence.

Students who are absent from more than one fifth of the number of lectures of any course during a semester lose all credit for the course.

Students may not be excused from laboratory and field requirements. All missed clinical and field requirements must be made up. In case of repeated absences from clinical courses, over one fifth of the total hours, the student may be asked to drop the course.

All Nursing courses that contain clinical parts should have an Objective Structured Clinical Examination (OSCE) as part of course assessment

- A cumulative average of 70 and above should be scored on the exams, regardless of the total course grade
- Passing a course requires:
    - Scoring above 70 as total average on the theory part,
    - Passing the OSCE and
    - Passing the clinical part.

Examinations and Quizzes

- Students may not absent themselves from announced final examinations and quizzes unless they present an excuse considered valid by the coordinator of the course. The course coordinator may then require the student to take a make-up examination.
- Students taking non-nursing courses from the other faculties of the University are required to follow the attendance regulations of that faculty.

Computer Literacy

Undergraduate students are expected to have a basic level of computer literacy. Ability to use Microsoft Word and Power Point programs is a minimum requirement, since most courses require term papers and oral presentations. If you feel that you are weak in this area, please take advantage of the various free computer programs that the Academic Computing Center offers throughout the year. You can reach the computing center through the AUB website or by calling 2599.

Grading System

- The School of Nursing uses the following grading system:

Evaluation of the student's achievement will include their work in theory, practice, as well as professional attitudes and behavior.

Cumulative Average	GPA	Cumulative Average	GPA	Cumulative Average	GPA	Cumulative Average	GPA
‹60	0	67	1.86	75	2.73	83	3.46
60	1	68	1.98	76	2.82	84	3.54
61	1.13	69	2.09	77	2.92	85	3.63
62	1.26	70	2.2	78	3.02	86	3.7
63	1.38	71	2.31	79	3.11	87	3.78
64	1.5	72	2.42	80	3.2	88	3.86
65	1.63	73	2.52	81	3.29	89	3.93
66	1.74	74	2.62	82	3.38	›=90	4
I Incomplete							
P Pass Normally Used for Theses and Projects							
PR In Progress							
W Withdraw							
F Fail							

All final grades are expressed in multiples of one.

- The passing grade in all nursing courses is 70.

INCOMPLETE GRADES

- Incomplete course work will be reported as an "I" followed by a numerical grade that reflects the evaluation of the student available at the end of the semester.
- To secure permission to complete the work for a course, a student must submit a valid excuse to the instructor of the course and the Academic Committee within two weeks from the date of the final exam for the course.

- Students permitted to complete work for a course must do so within **four weeks** from the start of the next regular semester. When the incomplete work has been completed and evaluated by the instructor, the director of the school (upon the recommendation of the Academic Committee) will consider changing the course grade. If this is done, a new grade will be reported to the Office of the Registrar.
- If no valid excuse is presented and the work is not completed within the time limits specified above, the "I" will be dropped, and the numeric grade available becomes the final grade in the course.

REGISTRATION

Academic Year

The academic year at AUB is divided into two semesters, fall, and spring, followed by a summer session. Each semester has a reading period and a final exam period, followed by a break before the next semester.

Course Registration

New students should register on-line via the Internet in August prior to the start of the academic year. The registration procedure is explained during the orientation week that is usually held during August.

Drop and Add

After the start of classes, at a date indicated in the university calendar, students may make changes in their schedules through a process known as "Drop and Add". After obtaining the approval of their advisers, students may change their courses. Depending on the changes that are made, students may need to settle their accounts at the Office of the Comptroller to adjust their tuition fees according to the final number of credits registered.

Payment of Fees

Each AUB student must pay all his/her tuition fees and other charges levied.

1. All students must finalize registration, including payment of tuition fees according to the academic calendar for the first and second semesters. Under special circumstances, late registration will be permitted during a period of no more than five working days after the announced deadline, but subject to a late registration fee (***150, 000 L.L.).***
2. Students who demonstrate financial need may make formal application for deferred payment arrangements for tuition fees to the Office of the Comptroller according to the academic calendar for the first and second semesters. These students are still required to complete all registration formalities within the set deadlines. Deferred payments are not permitted for the summer session in any faculty.
3. A student who applies for deferred payment must pay at least 50% of the net amount of tuition due. All other charges must be paid in full with no deferrals by the set deadlines. A student must pay a deferred payment application fee of $33, whether approved or not.
4. Every student granted deferred payment must sign a statement indicating agreement that failure to complete payment by the set deadline will result in receiving no credit for the semester in which the student failed to pay.

Students are expected to meet all financial obligations by the set deadlines. The University reserves the right to place a hold on the student's record that will prevent registration for future semesters and the release of transcripts and diplomas, as well as access to other University services, if he/she fails to promptly meet his/her financial obligations to the University.
Please consult the Office of the Registrar (ext: 2570 /2571) or the Registrar's website: http://staff.aub.edu.lb/~webregist/ for up-to-date schedules for registration and payment of fees.

ACADEMIC PROGRESS

Promotion

Students shall be promoted at the end of the summer session after completion of **30 or more credits** beyond the requirements from the previous level. However, students who register in September and who lack 6 or fewer credits for completion of a class will be registered in the next higher class at the discretion of the academic committee. **In order to be promoted, students must attain a minimum average of 68 at the end of the second regular semester (sophomore year) and 70 in the following years.**

Placement on the Dean's Honor List

To be placed on the Dean's Honor List at the end of a semester a student must:

- Be a fulltime student (registered at least twelve credits of new courses other than those repeated
- Not be on probation.
- Have passed all courses taken during the semester, have an overall average of 85, or be ranked in the top 10% of the class and have an average of 80.
- Not have been subjected to any disciplinary action within the University.

Placement on Probation

In concordance with AUB policies, a student will be placed on probation for any of the following reasons:
if the student fails 6 or more credits at the end of a semester, and/or
if the student does not attain the minimum required semester average of 65 for the first regular semester of BSN II or 68 for the second regular semester of BSN II, or70 for the following years.

Students in their freshman and sophomore years will be placed on probation at the end of their first semester only if they fail in one half or more of the credit hours carried.
These regulations do not apply to part-time students until they have completed at least 12 credits. For part-time students, a semester is defined as consecutive courses totaling 12 credits.

Removal from Probation

Action to remove probation at the end of a semester will be taken provided the full-time student:

- has passed all courses taken during the semester;

- achieved the minimum required average for that semester; and
- achieved the minimum yearly average required.

A student is expected to be removed from probation within two regular semesters.

Repeating Courses

- A student may repeat a course with the consent of the adviser and course coordinator.
- A student must repeat all required courses that he/she fails.
- When a course is repeated, the highest grade obtained will be considered in the calculation of the cumulative average.
- In exceptional cases, a student may be allowed to take a make-up exam for a course failed, within four weeks from the start of the next regular semester. S/he must have the approval of the course coordinator and the Academic Committee in order to do this.
- Repeating a course may delay the student's graduation from the program

Repeating the Year

The Academic Committee may require a student to repeat the year if he/she

- Fails in one-third or more of the credit load attempted during that year; or
- Fails to remove probation within two semesters; or
- Fails to obtain the minimum yearly average.

A student repeating the year must register for a full load and repeat all courses in which he/she has scored below the minimum required for that year.

Dismissal from the School of Nursing

A student may be **dropped from the BSN program** by vote of the faculty upon the recommendation of the Academic Committee for any of the following reasons

- fails to remove probation within two regular semesters;
- fails in one-third or more of the load attempted during that year and fails to attain the minimum yearly average;
- fails to satisfy the requirements of a repeated year; or
- is not making satisfactory academic progress, has not shown sufficient professional promise, or has behaved in a manner below the norms expected by the school.

Once the student is dropped from the BSN program, he/she will be placed as Majorless for 2 consecutive regular semesters to secure a transfer to another faculty. Failure to do so will lead to the students' **Dismissal from The Hariri School of Nursing**

Application for Readmission

When, in accordance with university regulations, a student is dropped, the implication is that the student is not qualified to continue his/her education at the School of Nursing. Consideration for readmission is given for one of the following reasons:

- If the student was not able to do his/her work efficiently because of health reasons. In such cases, the school will require a medical report from the university physician.
- If the student's adviser or a faculty member or administrative official of the University knows of certain family problems that may have influenced the academic achievement of the student.
- If, after spending one or two years at another institution, the student is able to present a satisfactory record and recommendation.

Ordinarily, supporting documents for the first two reasons must be presented within 30 days of when the student is dropped from the school, but in exceptional cases this presentation may be made at the beginning of the following regular semester.

If a student is on probation and leaves the University after the tenth week of the semester, the Academic Committee will decide whether he/she may be allowed to return to the University.

AWARDS, FINANCIAL AID AND SCHOLARSHIP

AWARDS

A number of awards are given to students who demonstrate exceptional academic achievement. The awards and related criteria are:

Penrose Award

This is a non-cash award that is made to an outstanding graduate of the school on the basis of scholarship, character, leadership, and contribution to university life.

Women's Auxiliary Awards

Cash and certificate awards are granted to senior students who meet the following criteria: academic achievement, professional integrity, and seriousness of purpose, contribution to professional and university life, and willingness to work at the AUB Medical Center after graduation. The awards are:

- Emily Asfour
- Mary Crawford (Florence Nightingale)
- Agnes Shammaa
- Laila Iliya
- Helen Zarwi
- Nada Alameddine Kanso
- Najla Morston
- Jacqueline Rubeiz
- Hanneh Shahine
- Ann Smith

Lions Award

This is a non-cash award, granted to a student who has been commendable for academic achievement and professional integrity.

Women's Auxiliary Contracted Scholarship: Annette Hajjar Scholarship.

The recipient of this award is required to work at the AUB Medical Center for a period of two years.

Janet Haddadin Nursing Award

The Janet Haddadin Nursing Award of $1000 is granted to a graduating undergraduate nursing student with the highest Cumulative GPA in Nursing"

Financial Aid and Scholarships

AUB offers financial aid to qualified students in the form of need-based financial aid grants, merit scholarships, and student work-study. Nursing students can also apply for a bank loan through the Office of Financial Aid.
Students applying for financial aid for the first time may obtain applications from the Office of Financial Aid in West Hall. Applications must be submitted before the deadline, which can be found at the website: http://staff.aub.edu.lb/~webfaid/ Financial need is assessed for each

student annually on the basis of factors such as family income, number of siblings enrolled in school/university, assets such as home(s), and other property, and major changes in financial status. Financial need is a necessary—but not a sufficient condition—for an award. Students with high need and excellent scholastic achievement records are more likely to receive awards than students with low need and average scholastic records.

The Hariri School of Nursing is offering 60% (Financial Aid+HSON scholarship) to full time students who show commitment to nursing and who have a good academic standing. In addition, these students might be eligible to request a 30% bank loan that can be paid back after graduation over a period of 10 years. The students can also apply for the work study program to cover the remaining 10% of the tuition fees. Each student should submit a financial aid application at the office of financial aid to be eligible for this scholarship.

Other scholarships are available for Nursing students and awarded based on financial need and academic performance.

GENERAL POLICIES AND INFORMATION

Non-Discrimination Policy

AUB encourages a diverse student body and workforce, and is committed to the principle of equal opportunity in education and employment. In the administration of its educational, admissions, and employment policies, and other university programs and activities, AUB does not discriminate on the basis of race, color, religion, age, national or ethnic identity, gender or gender identity, marital status, disability, genetic predisposition or carrier status, alienage or citizenship status, political affiliation, or any legally protected characteristic, except as required by Lebanese law.addition, in compliance with Title IX of the US Education Amendments of 1972, which prohibits sex discrimination in education and interprets sex discrimination as including sexual harassment and sexual violence, the University maintains a Title IX coordinator in the Office of the Provost and may appoint deputy Title IX coordinators as needed. Inquiries and complaints regarding sex discrimination, sexual harassment, and sexual violence may be directed to the Title IX coordinator, College Hall, 5th Floor, Beirut, Lebanon, or by email at integrityofficer@aub.edu.lb. The Office of the Provost maintains a resource page on Non-Discrimination, Harassment, and Title IX at www.aub.edu.lb/titleix. AUB will provide reasonable accommodation consistent with the law to members of the AUB community with a disability. What constitutes a reasonable accommodation depends on the circumstances and, thus, will be addressed by AUB on a case-by-case basis.

Academic and Professional Integrity

The Rafic Hariri School of Nursing follows AUB policy regarding the academic conduct of students. **The faculty and staff at the Hariri School of Nursing take all issues related to academic and professional integrity extremely seriously.**
Students are expected to have high standards of integrity in both the clinical and academic settings. Integrity is a reflection of self-respect and is demonstrated by a student's behavior in class and in the clinical setting.
Academic integrity and honesty are central components of a student's education. Ethical conduct at the University will be carried into the student's professional career.
Academic dishonesty, including but not limited to cheating and plagiarism, is deplored and not tolerated. Any act of cheating may be ground for probation, suspension, and/or expulsion from the school. Any act for plagiarism may be grounds for a failing grade on the paper and in the course. In addition, other sanctions may be imposed by the school for acts of academic dishonesty.

In clinical settings, students are expected to protect patients' confidentiality, and to be honest in any documentation regarding the patient's condition and their own assessment and interventions. Students are expected to maintain high professional standards, including being physically, intellectually, emotionally and academically prepared when caring for patients.

Student Code of Conduct (http://pnp.aub.edu.lb/general/conductcode/index.html)

The purpose of this code is to provide students with a clear statement of the standards of behavior expected in an educational environment, so that they make responsible choices

regarding their participation in the academic community and understand the consequences of their infringement of these standards. Violations may be of an academic or non-academic nature.

Jurisdiction of academic violations lies initially under the authority of the Dean of the faculty or school to which the student belongs. Misconduct that is clearly non-academic falls under the jurisdiction of the Dean of Student Affairs who will take the necessary action in consultation with the Dean(s) of the faculty or school to which the student belongs.

The following are examples of actions deemed in violation of the Student Code of Conduct; they are not intended to define misconduct in exhaustive or exclusive terms. Any student who violates the principles described in the preamble to this document shall be subject to disciplinary action in accordance with the Student Code of Conduct.

I. Definitions of Misconduct

A. Academic Misconduct

Offences involving academic misconduct include, but are not limited to, the following:

1. Cheating

While taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, cell phones, or another's work.

Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

2. Plagiarism

Whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.

3. In-Class Disruption

Students in class are expected to behave appropriately, and shall not disrupt classes or exams by extraneous conversation and/or misbehaving.

4. Dishonesty

Students are expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).

b. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).

c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

d. Stealing or damaging library books.

e. Unlawfully copying computer software.

f. Engaging in bribery of any kind.

B. Non-Academic Misconduct

1. Disruption/Obstruction

Students have the right to express their opinions on matters of concern to the University in an organized manner and in a public space, excluding residences on campus, but they must notify and consult with the Dean of Student Affairs before doing so. The nature of the event and any publicity accompanying it must be reviewed by the dean to assure that neither Lebanese law, nor university policies and norms are being violated.

In cases where student-sponsored events, including protests, sit-ins, and demonstrations are, after such consultation, not approved by the Dean of Student Affairs, or, if needed by the Board of Deans or the president, it may become necessary for the dean of student affairs to undertake disciplinary measures and even to instruct campus protection to bring the public gathering to an end.

Disrupting or obstructing the normal educational process or any university function or activity by student demonstrations, sit-ins, or 'strikes' is strictly prohibited. This includes, but is not limited to: disrupting classes, library operations, seminars, exhibitions, meetings, ceremonial events, or examinations; impeding or preventing others from attending such events; falsely activating a disaster alarm; or making a threat.

Under no circumstances are any members of the university family to be intimidated or threatened in the execution of their normal duties and responsibilities. That means that students and faculty who wish to hold or attend classes or to go to their offices or places of study shall not be prevented from doing so; non-academic staff and administrators shall not be impeded from going to their places of work.

2. Distribution of Unauthorized Published Material

The public distribution and posting of published materials such as fliers, leaflets, posters, audiovisuals, etc., must be approved and stamped by the Dean of student Affairs. The campus protection office will remove from display any such unauthorized material.

Students must not distribute, possess, store, or use, on campus or at a university-authorized event off campus, any kind of weapon, device, explosive, dangerous chemicals, hazardous materials, or any other instrument designed to do bodily harm or to threaten bodily harm. Instruments used to simulate such weapons, which endanger or tend to endanger any person, shall be considered weapons.

Students are also prohibited from distributing, possessing, storing, transferring, selling or attempting to sell, delivering, using or attempting to use, any illegal drugs, narcotic or hallucinogenic, on campus or at any university-authorized event off campus.

3. Theft

Stealing on campus or at a university-authorized event off campus, including unauthorized use of university equipment or services (e.g., telephones, photocopiers, or computer facilities), or possession of stolen property, is prohibited.

4. Destruction of Property/Endangering Public Safety

Students are expected to protect university property and to respect the safety of others. Acts contrary to these principles, which include, but are not restricted to, the following, are subject to disciplinary procedure:

a. Engaging in vandalism or other intentional damage (such as spray painting or graffiti) to property on campus or at university-authorized events off campus.

b. Littering, such as disposing of waste (empty bottles, cigarette butts, food containers, etc.) in other than designated places on campus.

c. Unjustified discharge, damaging, or tampering with any fire extinguisher, fire alarm, or other safety devices.

d. Taking, or attempting to take, action that damages or could damage private property, without the consent of the owner or person legally responsible.

e. Appropriating, or attempting to appropriate or possess, private property, without the consent of the owner or person legally responsible.

f. Unauthorized entry, unapproved duplication of keys or use of such, or unauthorized use of campus facilities.

5. Mental or Physical Harm

Acts that inflict mental or physical harm are prohibited, including the following:

a. Engaging in physical aggression including, but not limited to, assault.

b. Engaging, or attempting to engage, in intimidation, coercion, extortion, blackmail, or bribery; bullying; threatening violence, injury, or harm to others on campus or at university-authorized events off campus; endangering or tending to endanger the safety, health, or life of any person.

c. Engaging in behavior that creates a substantial risk of, or results in, injury to others, such as committing arson or causing a riot.

d. Using force, inciting violence, inflicting or attempting to inflict injury to others on campus or at a university-authorized event off campus.

e. Engaging in any activity that endangers the health and safety of an individual or demeans an individual in conduct of an unbecoming or humiliating nature, or in any way that detracts from an individual's academic pursuits.

6. Possession of Dangerous Weapons or Materials

Students must not distribute, possess, store, or use, on campus or at a university-authorized event off campus, any kind of weapon, device, explosive, dangerous chemicals, hazardous materials, or any other instrument designed to do bodily harm or to threaten bodily harm. Instruments used to simulate such weapons, which endanger or tend to endanger any person, shall be considered weapons.

Students are also prohibited from distributing, possessing, storing, transferring, selling or attempting to sell, delivering, using or attempting to use, any illegal drugs, narcotic or hallucinogenic, on campus or at any university-authorized event off campus.

7. Discrimination and Harassment

Students are not allowed to discriminate on the basis of race, gender, age, religion, national origin, ethnic origin, marital status, mental or physical disability. Nor shall they harass, intimidate, insult, or threaten others whether verbally, in writing, or through electronic means.

Engaging in sexual harassment, e.g., requests for sexual favors, unwelcome sexual advances, unwelcome physical contact of a sexual nature, spoken comments or abuse (including email) of a sexual nature, and the public display of sexually suggestive objects or pictures is prohibited (refer to the University Policy Against Discrimination and Harassment).

8. Smoking and Alcohol

The consumption of alcohol, on campus, by students is not permitted. Smoking is not permitted in university buildings other than private residences and those areas within the student dormitories, as may be designated from time to time by the Dean of Student Affairs (refer to the University Policy on Smoking). Students must abide by the following:

- Smoking is not permitted in any University building, including the Medical Center, except for private residences and student dormitory rooms, as may be designated by the Dean of Student Affairs. Smoking is prohibited in all dormitory common rooms, corridors, lavatories, and other public spaces. Smoking is prohibited in all university vehicles.
- Persons smoking in outside open areas, or in private residences, or in designated dormitory rooms where smoking is permitted, are required to ensure that smoking materials are disposed of in a tidy and safe manner. On no account are cigarette butts to be disposed of on the ground or thrown into the wooded or landscaped areas.
- All persons on AUB property are expected to respect this Smoking Policy. Breaches of the Policy should be reported to the Environmental Health and Safety Center,

extension 2360. Persons who are found to have breached the Policy will be subject to disciplinary actions.

9. Inappropriate Sexual Behavior

Publicly engaging in sexual behavior is prohibited as deemed by Lebanese law.

10. Use of Computers

Accessing protected computer accounts or other computer functions, knowingly transmitting computer viruses, and unethical use of AUB access is prohibited (refer to the University Policy on the Use of Computers).

II. Jurisdiction over Violations

AUB holds all students responsible for actions occurring on campus and at the AUB Farm, the AUB medical center, and university-authorized events.

Students attending an off-campus function as representatives of the University (such as, but not limited to, students serving on academic or athletic teams or engaging in club activities) are subject to disciplinary sanctions for violations of this code.

III. Disciplinary Actions

Disciplinary action will be imposed according to the nature (academic or non-academic) and severity level of the violation.

A. Academic Misconduct

In principle, enforcement of disciplinary actions for academic violations is carried out by those immediately responsible.

It is the responsibility of the faculty to uphold university policies. Thus, the immediate responsibility for dealing with instances of cheating, plagiarism, and other academic violations rests with the faculty member. If a faculty member has good reason to believe that a student has violated academic standards, it is his or her responsibility to discipline the student expeditiously. A faculty member who has good reason to believe that a student has violated academic standards must give a grade of zero on the exam or assignment where the violation occurred.

When the instructor has taken disciplinary action, he or she should send a letter to the Student Affairs Committee in the faculty or school in which the student is enrolled, informing that committee of the incident and the action taken. A copy of the letter will be placed in the student's file, as well as forwarded to the student's advisor for follow-up.

B. Non-Academic Misconduct

Violations of a non-academic nature are the responsibility of the Dean of Student Affairs, in consultation with the dean of the faculty or school in which the student is enrolled and, as necessary, the chief of campus protection. Students should know that the laws of

the Republic of Lebanon apply on campus, and those who violate these laws may be subject to criminal prosecution.

C. List of Primary Disciplinary Actions

Documentation of disciplinary actions, other than suspension and expulsion, will not become part of the student's permanent record. Records of the University Disciplinary Committee decisions, including charges and sanctions, will be maintained as part of the confidential records in the office of the respective Dean, for a period of up to four years after the student graduates or ceases to be a student.

D. Required Withdrawal from Campus Pending Hearing

In extraordinary circumstances, when the student's continued presence is deemed a danger to the university community, the student will be required to withdraw from the campus, pending a meeting of the University Disciplinary Committee. This action shall normally require the approval of the president of the University.

E. Secondary Disciplinary Actions

In addition to the disciplinary actions listed above, the following secondary disciplinary actions may be imposed upon those who violate the Student Code of Conduct. Secondary disciplinary actions may be of an academic or non-academic nature

IV. Complaint Procedure

Any person subject to, or who witnesses, a violation of the Student Code of Conduct should forward a written complaint to a faculty member, a chairperson, or any university official. Academic violations shall be forwarded to the dean of the faculty to which the student accused of the violation belongs. Non-academic violations shall be referred to the dean of student affairs. Violations that may require suspension or expulsion will be referred by the concerned dean to the University Disciplinary Committee.

The University Disciplinary Committee will deal with alleged violations in a manner that ensures that those charged with a violation the committee may take into consideration the student's cumulative discipline record.

Range of Actions

Informal Warning

This may be oral or written. It is a statement that the student has inadvertently violated a university regulation. The warning will be recorded in the respective Dean's records and the student will be documented.
Examples: *Littering and smoking in prohibited areas.*
Reprimand

This will be in writing. It is a statement that the student has violated a university regulation. It is intended to communicate most strongly, both the disapproval and the reprimand of the university community. The reprimand will be kept in the respective Dean's records.
Examples: *Inadvertent plagiarism - failure to cite sources appropriately, and inappropriate physical contact.*
Dean's Warning

This will be in writing. Only two Dean's Warnings are allowed in a student's academic career at AUB. It is recommended that any violation of university regulations after the second Dean's Warning results in consideration of suspension. Such a warning is kept in the file of the student and the respective Dean's records.
Examples: *Plagiarism, academic dishonesty, disruption-obstruction, mental or physical harm, discrimination and harassment.*
Suspension

This will be in writing and will form part of the student's permanent record. A student will be suspended for a fixed period of time during which the student may not participate in any academic or other activities at the University. At the end of the suspension period, the student may be readmitted to the University, only upon the recommendation of the University Disciplinary Committee.
Examples: *Cheating, theft, and destruction of property.*
Expulsion

This will be in writing and will form part of the student's permanent record. Expulsion denies the student the right to participate in any academic or other activities of the University for an indefinite time. Only under the most unusual circumstances, and upon the recommendation of the University Disciplinary Committee, will an expelled student be readmitted to the University.

Examples: *Academic dishonesty, possession of dangerous weapons or materials, and endangering public safety.*

N.B. Any person who maliciously lies to cover up an act sanctioned by the code of conduct will be considered to be an accessory after the fact and may be subject to disciplinary action.

Secondary Disciplinary Actions – Academic

The student may be prohibited from participating in the work study program.

The student may be prohibited from receiving any form of financial aid, scholarship, or monetary award.

The student may be prohibited from receiving any form of honor, merit award, or other academic recognition award.

The student may be prohibited from holding a graduate assistantship.

The student may be given a failing grade in a course or a test or any other form of academic assessment.

Secondary Disciplinary Actions – Non-Academic

The student may be prohibited from representing AUB in any official role, activity, or event.

The student may be prohibited from serving as an officer of any AUB organization including club, team, or society.

The student may be prohibited from living in any AUB hall of residence or similar facility.

The student may be strongly advised to attend treatment or counseling as determined by the director of the counseling center, in consultation with the Dean of Student Affairs.

The student may be required to make financial restitution.

The student's case may be referred to an external agency for further action (this could include the filing of criminal charges).

V. Formal Hearing by the University Disciplinary Committee

The University Disciplinary Committee will deal with alleged violations in a manner that ensures that those charged with a violation understand the charge and the evidence against them and are afforded a reasonable right of rebuttal.

The University Disciplinary Committee shall inform the student of the charge in writing. Evidence shall be presented in the presence of the student who shall have a reasonable right of rebuttal including the right to cross-examine witnesses. In determining penalties, the committee may take into consideration the student's cumulative discipline record.

VI. Appeal Procedure

Any student who is charged with a disciplinary offense has the right to a full and fair hearing for any disciplinary charges brought against him or her under university regulations.

If any of the following apply, a student may appeal to the Dean of the faculty or school regarding faculty or departmental decisions, or to the University Disciplinary Committee against disciplinary action taken by the Dean of Student Affairs or the dean of the faculty or school to which the student belongs:

1. Procedural error
2. New evidence
3. Unsupported conclusion
4. Disproportionate sanctions

The outcome of this appeal may result in higher, lower, identical, or no sanctions at all being imposed. The University Disciplinary Committee's decision shall be final.

Students Rights and Responsibilities

Students are members of the academic community and are also citizens. As citizens, students enjoy the same freedom of speech and right to petition that all citizens enjoy. Students have the responsibility to know and obey Lebanese law and the laws of the University. It is the responsibility of the student to know institutional regulations, policies, and established guidelines as stated in this handbook and in the University Catalogue. Students are accountable for their behavior at all times. Students have the right to freedom from discrimination on the basis of race, color, religion, sex, and age. Students have the right to be informed, in writing, of the expected behaviors and standards by which they will be evaluated prior to participating in classrooms and clinical activities. Students have the right to academic evaluations which are not prejudiced and which are based on stated course requirements. As members of the academic community, students are free, individually or collectively, to voice constructive criticism through identified channels on issues of institutional policy, curriculum, and matters of general interest to the student body without fear of reprisal.

While under the direct supervision of an instructor, students also have the right to adequate safety precautions provided by the School of Nursing. Students also have the right to negotiate participation in clinical situations which they feel are threatening to their personal health or life. Students, individually or collectively, have the right to expect, within a reasonable length of time, feedback concerning all student related issues presented to the faculty.

Freedom in the Classroom

Students are responsible for the content of the courses in which they enroll. They are also free to take reasoned exception to the data or views offered in any course of study, and reserve judgment about matters of opinion.
Students are responsible for complying with standards of academic performance required by each course in which they are enrolled. Such standards shall be communicated clearly in writing on or before the first meeting of each course. Students should have protection against prejudiced, arbitrary, and capricious academic evaluation.

Student Representation on Rafic Hariri School of Nursing Committees

Student representation on Rafic Hariri School of Nursing committees is encouraged. Students can request that items be placed on the agenda of any School of Nursing committee for discussion.

UNIVERSITY SERVICES

Student Services at the Rafic Hariri School of Nursing

Getting in Touch with the Right People at the Rafic Hariri School of Nursing

Students are encouraged to communicate any concerns they might have to the appropriate persons. They can refer to the Student Services Officer for the following issues:

- Answering queries about the BSN and MSN programs
- Student orientation and advising
- Follow up on different awards and scholarships available to nursing students
- Problems in registration (opening capacity, removing restrictions, resolving time conflict problems, removing holds, selection of elective courses, drop and add courses)
- Dealing with the administrative body (Registrar's office, Office of Financial Aid, Office of Student Affairs and specific committees at HSON)
- Writing and submitting petition letters (underload/overload credits, late registration, medical reports, course withdrawal, reactivation and readmission etc.)
- Selection of specific academic forms for internal and external procedures
- Program evaluation and satisfaction surveys
- Career guidance and work opportunities
- Student related activities such as student elections, NSS activities and graduation parties etc.
- Requesting credentials after their graduation.

The Student services office seeks to assist and guide nursing students to develop their plan to academic success, by referring them to the appropriate resources and procedures, and ensuring that they are complying with AUB academic rules and regulations.

Issues related to a particular course are best discussed with the course coordinator. Problems with a student's academic progress should be followed up with the assigned advisor. Students may discuss issues related to a particular class with their advisers. There is one class advisor for each of the three years: BSN II, BSN III, and BSN IV. If the student cannot resolve problems with the course coordinator, adviser, or class adviser, he/she should talk to the BSN coordinator, and then the BSN convener. If necessary, issues are referred to the Director of the School.

Other services offered at HSON:

- Requesting lockers at the locker room
- Requesting badges
- Requesting name pins
- Completing the Clearance process upon graduation or withdrawal from the university
- Facilitating colloquium papers

Simulation and Clinical Competency Center (SCCC)

The Simulation and Clinical Competency Center (SCCC) was established by the Hariri School of Nursing in 2009 to assist AUB students, faculty and healthcare practitioners to achieve higher levels of competence and safer patient-care. Individual students use the Lab facility for self-appraisal; faculty uses it for evaluation purposes and our hospital partners (AUBMC) use it to

enhance clinical practice.

Introduction to Simulation

Simulation started with the aviation industry and it improved pilot performance and airline safety. Simulation is defined as the deliberate creation or imitation of a situation for the purpose of learning using different techniques and technologies.

Simulation in healthcare education is considered an effective tool in clinical teaching. Simulation has the potential to provide immersive, interactive, reflective team-learning experiences in a controlled environment. In simulated environment students learn practical skills (e.g., medication injection), communication skills (obtaining patient history) to critical thinking and decision making skills regarding the care of the simulated patient. The tools of simulation range from single body part, as an arm for injection, to full-body mannequin that are physiologically responsive, to actual people playing the patient's role.

Who Uses SCCC Lab?

- AUB students from nursing, medicine, pharmacy and other health related disciplines
- AUBMC practitioners from all disciplines
- Non-AUB health-care students and practitioners after securing a special permission

Why Use Simulation?

- Safe learning environment: Simulation presents a safe learning experience for healthcare students and practitioners (It is a safe place to make mistakes and learn from them - the patient can't be harmed!)
- Increase in skill development: Simulation offers a chance to practice a skill repeatedly until mastery (with or without instructor guidance)
- Builds effective healthcare teams: Simulation brings people from different healthcare disciplines to work together as a team- a requirement for safe patient care

Location and Hours of Operation

Located on the 2nd floor of the Hariri School of Nursing, the SCCC is composed of 5 spacious rooms which can be used for classrooms, skills training and physical assessment. One room is designated for high fidelity scenarios (houses the highly interactive manikin) and includes a control area and a debriefing space.

The SCCC is open Monday to Friday from 8 am to 5pm during the academic year.

Booking Ahead Of Time

All are urged to book the Lab ahead of time. Priority in booking the SCCC is given to educational programs for AUB nursing and medical students. To schedule a session at the Lab, the student/learner must send an email to the Lab coordinator (Randa Farha rf37@aub.edu.lb). The coordinator in turn will confirm by email based on Lab availability. Any changes to an existing request for a session at the SCCC must be submitted by email to the Lab coordinator.

Code of Conduct

The following are binding practices for everyone using the SCCC facility (faculty, clinical teachers and students):

- No food or drink is allowed at any time in the Lab.
- No personal items are to be placed on the beds.
- Wash hands before coming to the center – use available alcohol-based hand sanitizers.
- Sign in at all times for both practice and testing on the attendance sheet
- Treat manikins like people. Treat simulators with respect as if they were real patients- handle them gently and with care.

- Only manikin lubricant can be used on the simulators when inserting objects (e.g. catheters).
- Never use ink pens at the bedsides as ink permanently stains the manikins. Please use pencil or only write at the tables at the end of the bed
- Gloves must be worn when coming in contact with the simulators (SimMan, SimBaby and NOELLE).
- Leave the center in the same condition it was when you first started (place all the chairs back at the tables, make the bed and return all equipment and supplies to the area where found).
- Sign a confidentiality agreement not to disclose any of the proceedings of a scenario outside the Lab. Report any violation to faculty.

Definitions

Effective simulation-based learning experiences are structured to include a pre-brief and a debrief component. The following are important definitions to learn:

PRE-BRIEF FOR A SIMULATION

Pre-brief is defined as an orientation session held prior to the start of a simulation-based learning experience in which instruction or preparatory information is given to the participants. It is the foundation of a successful simulation learning experience.

DEBRIEFING AFTER SIMULATION

Debriefing is the discussion that immediately follows a simulation-based experience. It is facilitated by an educator who observes the simulated experience. The discussion fit participants' objectives and outcomes of the simulation-based learning experience. Debriefing aims to promote reflective thinking. True learning occurs through a process of self-reflection. Effective debriefing is conducted in an environment that is conducive to learning and supports confidentiality, trust, open communication, self-analysis, and reflection.

University Libraries

The AUB library system consists of two main libraries: the University Libraries and Saab Memorial Medical Library.
The University Libraries include the Jafet Memorial Library (the Central Library) and two branch libraries: the Engineering and Architecture Library, and the Science and Agriculture Library with its annex AREC (Farm) Library.

The University Libraries are currently open 90 hours per week. The schedules of the libraries differ. Refer to the AUB website, click on libraries, in order to know the opening hours. Librarians also send regular emails regarding changes in their operating hours in the various semesters and during holidays. All libraries have photocopying machines that are available for student use. A card containing 100 photocopying units may be bought for 5, 000 LL in vending machines located in each library. Photocopying is also offered at the University Book Store for a small fee.

The Saab Medical Library (SML) is probably the one you will be using the most. The SML collection consists of 1,200 printed periodical subscriptions; over 82,320 back file periodical volumes, nearly 42,000 books, and nearly 2,300 audio-visual items, including computer

software. SML has a large number of the most important bibliographic medical and allied health databases, and more than 2,500 electronic journals. SML is accessible through the internet at http://www.aub.edu.lb/libraries/medical. The library has a special collection called the Lebanese Corner, http://192.168.100.187/, which includes publications about Lebanon or by Lebanese authors in the fields of medicine and other health-related topics. Databases are currently accessible via the AUB website.

Computing and Networking Services

Computing and Networking Services (CNS) provides access to different services that require user authentication. Before using the service, you must activate your **AUBnet account**: The AUB net account provides e-mail, intranet, and Internet access, in addition to other services such as roaming storage space, network printing, and personal web site space. You must activate your AUB net account before you can activate other accounts.

The **AUBsis account** provides access to the AUB Student Information System, a web-based application designed to provide the following on-line services to students and faculty: On-line Registration, Drop and Add, Class Schedules, Grades, Student Transcripts, Address Information, and Billing Statements.

Student computer labs are located throughout the University, including the libraries, faculty of medicine and faculty of health sciences buildings, among others.

An Internet fee of 300, 000 LL is charged every year and will automatically be added to the statement of fees. The quota of Internet data per month per student is 100MB. This is a combined quota of web and e-mail data. Through the AUB Net Resources web site you can find out your Internet data usage for the month. No limit exists on the time spent browsing and sending information on the web. The limit is only on the volume of data that is sent/received in the process.

Access to computer hardware, software, intranet, and the Internet services is provided to students for enhancing their learning. Access to the use of AUB computer facilities is through authorized computer accounts. Students must abide by the AUBnet Code of Conduct for Users of Computing System and Internet Services.

A computer account consists of a unique log-in ID and a password. Your log-in ID tells the computer system who you are. You must always keep your password secret. To activate your AUB computing accounts go to http://www.aub.edu.lb, select ”Get your AUB Computing Account,” and follow the instructions.

Student E-mail Address

To ensure that students receive timely communication and important announcements, the student’s current email address must always be on file in the School of Nursing. Every student is provided with an e-mail address. It is strongly recommended that all students use their AUB e-mail address as their primary one for the duration of the time they are studying here, to avoid missing announcements or other important communication from faculty and staff. We suggest that you get an email account during orientation week and check your email once per day.

The Writing Center

For students who need assistance in writing papers or projects, the AUB writing center located in West Hall Room 307 provides assistance. Tutors from the Department of English are available Monday through Friday 9 am – 3 pm and consulting services are free. The extension to call for taking appointments is 3157.

The Counseling Center

Adjusting to university life may be difficult for some students. For students who experience personal difficulties that lead to anxiety, depression or other psychological problems, the counseling center can provide assistance. The counseling team can assist with study related issues such as exam anxiety and time management, Counseling is free and confidential. The center is located in West Hall Room 206. The extension to call is 3196 or 3178.

Bookstore

The University Bookstore is located at the back of Bliss Hall across from Penrose Hall. It stocks most of the required textbooks for specific courses, dictionaries, and other reference works, and a limited number of general publications. Assorted AUB items and gifts such as clocks, mugs, T-shirts, and binders are also available.

Mail Service

The University Post Office, located in the basement of Ada Dodge Hall, handles local campus mail and mail for the Lebanese postal services. To secure a campus mailbox a student must show a receipt of fee payment at the AUB Post Office. Urgent mail may be sent by Aramex through the AUB Post Office. A special rate is offered to the AUB community. Also DHL offers special rates at the AUB Bookstore.

Food Service

The University operates a modern, cafeteria-style food service on campus in Ada Dodge Hall. In addition to the main cafeteria the University also maintains the Mary Dodge Hall Cafeteria, the Engineering Cafeteria, and the Agriculture Kiosk. These facilities provide a variety of hot and cold refreshments for students and their guests. Vending machines are available in a number of university buildings.

Students Housing

AUB is a residential university. For more information, check the AUB Catalogue, or check the Student affairs Office website at: http://staff.aub.edu.lb/~websao/house/.

Student Transportation

AUB allows very limited automobile access to campus: only students suffering from illness or disabilities may bring cars on campus. Authorization from the Infirmary must be received before a permit can be issued. Students should contact Business Services at extension 3510 for a special permit.

Students with Disabilities

Students with disabilities applying to AUB are strongly encouraged to make their disability known to the Admission Office. This information will not affect the decision on admission; rather, it will give the University the opportunity to offer specific assistance and support through programs and services provided by different departments on campus. Students need to consult with their advisers for assistance.

UNIVERSITY HEALTH SERVICES

Medical Record

An entrance medical record form will be sent to all admitted students who have made the commitment to enroll at AUB. The form should be completed by the student's family physician and mailed before the period of registration. Alternatively the completed form may be delivered by hand to the Office of Admissions.

All new students must have a tuberculin test at the time of the preliminary medical check, held during registration, and must report 48 hours later for the check on the test. Upon clearing the medical test, the student will be issued a clearance slip to proceed with registration. Students will not be registered unless they obtain this clearance slip. Medical checks may be completed in advance of registration provided that the student reports to the University Health Services on campus and brings along a letter of acceptance and the entrance medical record.

Returning students are not required to complete any medical forms. Important changes in the student's medical condition and/or updating immunizations should be reported to a University Physician by appointment at the Health Services Center. Information will be kept confidential.

All nursing students are required to go check on their Hepatitis B status, prior to commencing clinical..

The University Health Services (UHS) provide medical care to members of the university community in Sawaf Building at the following office hours:

Office hours: Monday through Friday

- **Offices** 8:00 a.m. - 5:00 p.m.
- **Clinics** 8:00 a.m. - 7:00 p.m.

Office hours: Saturday

- **Clinics** 10:00 a.m. - 2:00 p.m.

The Sawaf building is located near the AUB Medical Center. Appointments can be made at the reception desk. A physician is also available to receive patients on a walk-in basis. Walk-in patients must have problems of an urgent nature; otherwise, they will be given appointments for a later time. In case of emergency, the patient should report directly to the Emergency Unit at the AUB Medical Center or to the nearest Emergency Service.

Health Insurance Plan (HIP)

Students may elect to enroll in the University's Health Insurance Plan (HIP), provided they register for at least six credit hours. Students enrolled in the spring semester are covered until September 30, provided they do not leave the University or drop all of their courses. A married student will have the option of including his/her spouse and children for an additional fee. A student may be exempt from enrolling in HIP if he/she presents proof of coverage by another health insurance plan. HIP covers only those expenses incurred at the AUB Medical Center. Medical bills from other institutions are not covered.

National Social Security Fund (NSSF) Medical Branch

Membership in the NSSF is mandatory by law for all Lebanese students, excluding freshman and special students, and students who are older than 30 years. Non-Lebanese students may not join NSSF. To facilitate enrollment in the NSSF Medical Branch, students are required to bring the following items when registering:

- A social security application form filled in correctly. Copies of this form will be available for distribution at the time of registration to students.
- A photocopy of the Lebanese Identity Card.
- Their NSSF number if already registered.
- The NSSF number of either parent if insured with the NSSF through father or mother.

STUDENT EXTRACURRICULAR ACTIVITIES

Clubs and Societies

Opportunities for students to participate in extra-curricular activities, generally organized under the auspices of student-governed societies or clubs, are numerous at AUB. Membership is open to all registered students upon completion of a membership application and payment of a nominal fee. Almost all student clubs provide an outlet for artistic expression: Art, Music, Photography, and Poetry Clubs. For further information or to obtain a list of active clubs and societies, go to the Office of Student Activities in West Hall, extension 3182.

Nursing Student Society

The Nursing Student Society (NSS) brings together nursing students from all levels to engage in various professional and social activities, under the guidance of an assigned faculty advisor. Objectives of the NSS are to:

- Serve as an organization through which matters related to the welfare of students and the school is transacted.
- Provide a channel for coordination of activities between the students and faculty members, and with other student organizations.
- Organize activities that promote a spirit of loyalty and fellowship among the student body.
- Provide means for active participation in activities that foster the personal, professional and civic development of students.

The NSS has three standing committees:

1. The Educational Committee organizes educational programs of interest to the community.
2. The Social Committee is responsible for social and recreational activities.
3. The Publicity and Finance Committee is responsible for publicity and financial matters.

Athletics and Recreation

The University offers a wide range of sports, athletic and recreational programs through its Athletics Department. Facilities include AUB's Green Field, which hosts international, national, and varsity sports tournaments. The Green Field includes the University's soccer field, lighted outdoor basketball courts, lighted outdoor volleyball courts, and a lighted 450-meter track.

IMPORTANT TELEPHONE NUMBERS

Finally, here are some helpful telephone numbers for you to have:

Clubs and Student Activities (West Hall)	3182
Emergency Room	6604
Financial Aid	3160
Housing	3175
Infirmary, University Health Services	3000
Registrar	2570
Student Affairs	3170
School of Nursing	5950, 5951

Appendix A

Clinical Practicum Orientation Tips

These are simple "tricks" for a good clinical experience

- **Punctuality:** Be 15 minutes early to the rotation. Have a good breakfast before coming.
- **Preparation:** Make sure you have all the equipment you need and that you reviewed your notes very well ahead of time.
- **Dress Code:** Wear clean shoes and clothes, shave, everyone will respect you when you dress well and act in a professional way.
- **Caring:** Make a special time to go to the patient's room and discuss their condition.
- **Self Learner:** Be interested to learn more, ask whatever question that pops to your head, and just enjoy the learning experience.
- **Professionalism:** Maintain a positive relationship with your preceptor, your fellow students and health care team.
- **Safety:** Assure your own safety. Ensure you have completed your HBV. HAND HYGINE IS VERY IMPORTANT KEEP IT IN MIND.

Appendix E

Title:	Dress Code: Nursing Staff and Nursing Students	Index Number:	GLD-NSG-001 (Func.- Categ.-Sr. No.)	
Scope of application:	All Nursing Staff and Nursing Students	Original Date: 22.5.2006	Reviewed on: 31.01.2019	Next Review: 31.01.2022

1. *Policy*

1.1. All nursing staff, nursing students and unit clerks shall abide by the Nursing Services policy on Dress Code.

1.2. The nursing staff and Floor Clerks shall abide by the standard uniforms provided by the Nursing Administration.

2. *Purpose*

2.1. To define the standards of dress code for nursing staff.

2.2. To ensure professional appearance of all nursing staff.

2.3. To prevent the spread of infections and promote safety of patients, visitors, and staff.

3. *Procedure*

3.1. Nursing uniforms shall be neat, clean, wrinkle free and in good shape.
- 3.1.1. Veils shall be light in color and tucked inside the uniform at all times.
- 3.1.2. Pants shall be loose fitting.
- 3.1.3. Navy blue, black, or white jackets may be worn over the uniform.
- 3.1.4. Male nurses shall wear a white T shirt under their top.

3.2. All nursing staff shall wear the identification badges/name pins at all times. ID badges shall be visible and worn above the waist (Multidisciplinary Policies and Procedures Manual, Identification Badges, GLD-ADM-001).

3.3. Light jewelry (such as a small necklace) shall be appropriate and not causing safety hazards or hindrances while working.
- 3.3.1. Necklaces or chains with religious connotations shall be discreet.
- 3.3.2. Earrings must be professional in appearance, and appropriate in the clinical area.
- 3.3.3. Tattoos shall not be apparent.

3.4. Hair shall be clean, well-groomed and tidy. In clinical environment long hair shall be tied back.

3.5. Make up shall be discreet. Perfume shall be light.

3.6. Nails shall be sufficiently short to ensure safe patient contact and good hand hygiene. No False finger nails of any type, including acrylic, gels or wraps.

3.7. Male nurses shall be well shaved.

3.8. Shoes shall be clean, simple, closed, comfortable and noiseless. Non-perforated clogs are permitted only in OR.

3.9. A clean white lab coat shall be worn over professional attire for all nursing staff who are not involved in direct patient care. Staff shall dress in a professional manner for work. Casual clothes are not allowed (e.g. Jeans, T-Shirt and open shoes are not acceptable)

3.10. All Staff shall maintain a high level of personal hygiene and appearance.

3.11. Staff who need to wear special medical shoes due to a physical disability or medical reason shall submit a written medical recommendation to the nursing administration. Final approval shall be at the discretion of the Nursing administration.

3.12. Staff shall not go outside the hospital campus wearing their unit-specific nursing uniforms.

3.13. Staff shall change their uniform in case they become dirty or soiled.

3.14. In Critical Care Units, the following shall be enforced:
- 3.14.1. Bare Below the elbows: Nursing and medical staff shall wear their scrub suits (short sleeves), no wristwatches, no jewelry, and no ties during clinical practice.
- 3.14.2. White Coats: Nurses shall remove their white coats prior to contact with patients or the patient's immediate environment.
- 3.14.3. Ties, long veils, scarves and other items of clothing shall not be allowed to dangle down, they must be tucked inside the scrub suit.

4. *Responsibilities*

4.1. All management team shall enforce dress code policy under their jurisdiction:
- 4.1.1. Ist offence – verbal warning.
- 4.1.2. 2nd offence – verbal warning and sent home to change.
- 4.1.3. 3rd offence – written warning in the personnel file.

WELCOME

Welcome to the Rafic Hariri Hariri School of Nursing (HSON). We are delighted that you have chosen to study nursing at AUB and look forward to meeting each one of you. This is an exciting time for nursing—both at AUB and throughout the world.

In the field of nursing generally, nurses are taking on new and greater responsibilities. Although taking care of patients is still our primary responsibility, we are also playing a role in setting health care policy at the national, regional, and international levels and researching important health care issues.

Here at AUB, we celebrated our 100th anniversary in 2005 and our 110th anniversary in 2015. We have introduced new programs and are constantly updating and revising our curriculum. Our graduates are in great demand and they are occupying leadership positions in different countries in the world. In 2007 the BSN and MSN programs were granted unconditional accreditation by the Commission on Collegiate Nursing Education (CCNE) in the USA for five years and in 2012 the programs were reaccredited for a period of 10 years. AUB Hariri School of Nursing is the first school to be accredited by CCNE outside the USA. In 2008 the HSON received a $10M gift to endow the school and the building and in 2009 the Rafic Hariri School of Nursing building was inaugurated. The building houses faculty offices, classrooms, an auditorium, a computer lab, skills and simulation lab, a research center, and student facilities.

In 2015, HSON won three major regional awards; HSON received the best institution award, Dr. Huda Huijer the distinguished researcher award, and an MSN graduate the best thesis award. The Chi Iota Honor Society Chapter, the first in the region, was formally chartered by Sigma Theta Tau International (STTI) in 2015 and 131 members were inducted into this prestigious honor society. In 2017, the PhD in Nursing Science program was fully approved to be formally launched in 2018-19. In 2018, AUB granted HSON independent Faculty status and appointed Dr. Huijer as founding dean of the school. We continue to be proud of these accomplishments and we look forward to working with you to celebrate these achievements.
We hope this handbook will be a useful guide for you especially during the first couple of weeks when everything is so unfamiliar. If, however, you are lost or need help, please come and find us. We are eager to do whatever we can to make this a positive and rewarding experience for you.

We also welcome any comments or suggestions you may have on how we might change and improve on this handbook in order to make it more helpful for future Hariri School of Nursing students.

Good luck!

Dr. Huda Abu-Saad Huijer, RN, PhD, FEANS, FAAN
Director, Hariri School of Nursing

2. Dr. Dina Madi
3. Dr. Angela Massouh
4. Dr. Nuhad Dumit (ex-officio)

Research Committee:

1. Dr. Soha Fares (Chair)
2. Dr. Marina Adra
3. Dr. Gladys Honein
4. Dr. Angela Massouh
5. Dr. Samar Noureddine (representative on URB)
6. Dr. Suzanne Dhaini (Appointed)
7. Dr. Houry Puzantian (Appointed)
8. Dr. Lina Badr (representing AUBMC)

Senate Committees:

1. Senate: Dr. Huda Huijer and Dr. Nuhad Dumit
2. University Admissions Committee : Dr. Lina Kantar
3. Board of Graduate Studies : Dr. Samar Noureddine
4. University Disciplinary Commitee : Dr. Dina Madi
5. Library Committee : Dr. Souha Fares
6. University Publications Committee: Dr. Gladys Honein
7. University Research Board : Dr. Samar Noureddine
8. University Committee on Student Affairs : Dr.Marina Adra
9. Academic Development Committee : Dr. Hala Darwish
10. Senate Steering Committee : Dr. Nuhad Dumit
11. Senate Committee on Faculty Affairs : to be elected by senate when by-laws are approved

Representative on FM Research Committee: Dr. Souha Fares (appointed)

Student Affairs Committee:

1. Dr. Marina Adra (Chair) and representative on senate student affairs committee
2. Dr. Dina Madi, class advisor BSN II
3. Mrs. May Khoury, class advisor BSN III
4. Dr. Marina Adra, class advisor, BSN IV
5. Dr. Lina Younan,Graduate Student Advisor
6. Dr. Angela Massouh, NSS advisor assisted by Dr. Nour Alayan
7. Mrs. Lynn Berbary (SSO)

HSON Search Committee

1. Dr. Huda Abu-Saad Huijer (Chair)
2. Dr. Michael Clinton
3. Dr. Nuhad Dumit
4. Dr. Laila Farhood

5. Dr. Samar Noureddine

HSON Catalogue Committee

1. Dr. Samar Noureddine; Chair of Graduate Department
2. Dr. Nuhad Dumit; Chair of Undergraduate Department

HSON Newsletter Committee

1. Dr. Gladys Honein (Chair)
2. Dr. Marina Adra
3. Mrs. Lynn Berbary Najem
4. Mrs. Talin Gulgulian
5. Ms. Angela Massouh
6. Ms. Nisrine Ghalayini

HSON Social Committee:

1. Ms. Randa Farha (Chair)
2. Mrs. Talin Gulgulian (co-chair)
3. Mrs. May Khoury
4. Mrs. Lynn Berbary
5. Mrs. Silva Dakessian
6. Mrs. Danielle Damianos
7. Dr. Ghada Assaf

HSON Selection committee for MCF scholars:

1. Dr. Samar Noureddine (or a delegate)
2. Ms. Nisrine Ghalayini

PREFACE

This handbook has been prepared for undergraduate nursing students to provide detailed information about the Bachelor of Science in Nursing (BSN) program at the American University

of Beirut (AUB). The handbook includes guidelines to facilitate the student's progress in the program from admission through graduation.

The faculty and administration of the Hariri School of Nursing hope that the educational experience at AUB will be a rewarding and challenging experience for each student. We are here to assist students to reach their professional and educational goals.

In addition to the policies found in this handbook that are specific to the undergraduate program at the School of Nursing, the student should obtain and keep a copy of the AUB Catalogue, which contains policies and procedures that apply to all undergraduate programs in the University. We urge you to consult the catalogue and this handbook often. If you have any questions or are unsure of a particular policy, please contact the BSN Coordinator who is available to assist you.

GENERAL INFORMATION ABOUT THE SCHOOL OF NURSING

Historical Background

The School of Nursing, founded in 1905, was the first nursing school in the Middle East. The five–year Bachelor of Science in Nursing program, established in 1936, was replaced in 1964 by a four–year program leading to the degree of Bachelor of Science in Nursing. Students entering the school as sophomores graduate in three calendar years. The RN-BSN program was reactivated and launched in 2003. The Masters of Science in Nursing (MSN) program was launched in 2003. The Bachelor of Science in Nursing program (BSN) and the MSN program are registered by the Department of Education of New York State, HEGIS codes 1203.00 and 1203.10, respectively. The BSN and MSN programs are accredited by CCNE, the Commission on Collegiate Nursing Education, in the USA. The AUB School of Nursing is the first School of Nursing outside the US territories to be accredited by CCNE.

Mission

The mission of the School of Nursing is to promote and maintain the highest educational standards of excellence, integrity, and professionalism in nursing, following the American model of nursing education and practice. The school aims to provide learning opportunities that will enable students to develop into competent nurses who respect cultural diversity while coordinating and delivering high–quality, compassionate nursing care in Lebanon and beyond, guided by ethical principles. The faculty believes education is an interactive process between faculty and students with both taking responsibility for active learning. The baccalaureate program, drawn primarily from the humanities, sciences, and caring disciplines, focuses on the use of nursing theory and research as a basis for practice. The master's program focuses on preparing nurses for advanced nursing practice roles, and is based on the use and generation of research–based knowledge to guide practice. Nursing students at AUB learn to think critically, develop professional attitudes and leadership skills, and appreciate the value of life–long learning and freedom of speech

Programs

Undergraduate Programs:

» Bachelor of Science in Nursing (BSN)
» Registered Nurse-Bachelor of Science in Nursing (RN-BSN)
» Bachelor of Science-Bachelor of Science in Nursing (BS-BSN)

Graduate Programs:

Master of Science in Nursing (MSN)
MSN students can specialize in one of four areas:

1- Adult Gerontology Clinical Nurse Specialist
2- Psychiatric Mental Health Clinical Nurse Specialist
3- Nursing Administration and Management
4- Community and Public Health Nursing

Undergraduate Program Outline

Admission

Students holding diplomas from a 12–year secondary school may gain admission to the School of Nursing as first year nursing students (see page 38 for required courses at the freshman level). Freshman students wishing to transfer to the School of Nursing from AUB or another institution may gain admission provided they complete the required freshman courses.

Bachelor of Science in Nursing (BSN)

The School of Nursing follows the admission policies and criteria of the University.

RN–BSN Program

The curriculum is designed to permit the graduates of a technical program in nursing to pursue the degree of Bachelor of Science in Nursing provided the university entrance requirements are met. The time limit for completion of the program should not exceed six calendar years. A selected number of nursing courses may be validated if applicable.

Preferred requirement for admission to the program is three years experience in addition to the English Entrance Exam. The candidate may be asked to interview with the school's director and/or program convener.

According to the decree no. 855 dated 01/07/2015, issued by the Ministry of Education and Higher Education, holders of the technical baccalaureate (BT) are only eligible for admission to the same major as that of BT. In this case, holders of BT applying to the BSN program should complete the following remedial/pre-requisite freshman level courses prior to the BSN II year:

- 3 credits in Mathematics (MATH 101 or 102)
- 3 credits in Chemistry (CHEM-101)
- 3 credits in Biology (BIOL-101)
- 3 credits in Physics (PHYS-101, 103 or 200)

BS/BA-BSN Accelerated Program

The School of Nursing accelerated program is designed for individuals who have a BS/BA in fields other than nursing. The streamlined curriculum permits students to earn a BSN in 24 months. Students who graduate from this program are entitled to sit for the National Colloquium Exam to become registered nurses. The admission to the BS/BA-BSN program requires the following:

BS/BA degree in a field other than nursing
A minimum GPA of 75 including prerequisite courses and general education requirements
Completion of the following prerequisite courses prior to admission: ENGL 204, PSYC 201, Biostatistics course, PSYC 210, SOAN 201, and four elective courses

THE BSN DEGREE REQUIREMENTS

A student has a maximum of six (6) years to complete an undergraduate degree at AUB, if he/she enrolls as a sophomore student. You must complete all requirements for the BSN degree in order to participate in graduation activities.

Graduation Requirements

All recommendations for graduation are made by vote of the faculty, upon the recommendation of the academic committee.
To be eligible for graduation with the degree of Bachelor of Science in Nursing, the following requirements must be met:
completion of the prescribed program of study with a minimum of 103 credits after the freshman class or equivalent, 100 credits for those entering at English 204, 91 credits for those entering as registered nurses and
an overall average of 70, excluding freshman courses.
The maximum time allowed for the completion of the degree program should be within the following specified periods:

BSN II	six calendar years
BSN III	four calendar years
BSN IV	two calendar years

Students must petition the academic committee for an extension of time if needed.
All undergraduate transfer students from AUB or from other recognized institutions of higher learning to the School of Nursing need to complete the required prerequisites and all required nursing courses. A minimum residency period of one year or 30 credits for within AUB transfers and 45 credits for transfers from outside must be completed at AUB.
Course credits pertinent to the nursing curriculum may be transferred according to criteria set by the admission and academic committees.

BSN PROGRAM OUTCOMES

I. Integrate knowledge from the arts, humanities, fundamental and basic medical sciences, and nursing theory in professional practice.
II. Demonstrate competency in clinical skills and critical thinking.

III. Utilize current research knowledge related to health promotion and maintenance, illness prevention and restoration of health of individuals, families and groups with diverse cultural backgrounds.
IV. Demonstrate leadership skills in the care management of clients in different health settings based on current health care policy.
V. Collaborate with other health providers to promote the well being of individuals.
VI. Demonstrate responsibility, accountability, and continued professional development.
VII. Participate in professional and community organizations for the promotion of the nursing profession in Lebanon and the region.
VIII. Demonstrate effective use of personal, interpersonal and group communication skills in practice.
IX. Espouse principles of professional ethics and personal integrity in nursing practice.

In order to achieve the BSN program outcomes upon graduation, the student is expected to achieve at the end of each class certain learning outcomes, called level outcomes).

BSN Student Outcomes		
BSN II (Sophomore Year)	**BSN III (Junior Year)**	**BSN IV (Senior Year)**
Upon completion of the sophomore year the student shall be able to: A. Demonstrate beginning skills in effective communication B. Identify healthcare needs of clients based on assessment of physical, psychological, and social parameters C. Identify developmental milestones in relation to the health-illness continuum D. Provide basic nursing care based on the nursing process E. Demonstrate skills in searching the nursing literature F. Identify ethical principles that govern the nursing profession	Upon completion of the junior year the student shall be able to: A. Utilize the nursing process in planning the care of the clients along the health-illness continuum B. Provide comprehensive/holistic care to individual clients across the life span C. Integrate theoretical knowledge from the social and basic sciences with that of nursing as a basis for practice D. Appreciate the use of research in nursing practice (assessment and intervention) E. Demonstrate therapeutic communication skills with clients F. Demonstrate ability to work in groups G. Identify ethical principles that govern nursing practice H. Demonstrate responsibility and accountability for personal and professional growth	Upon completion of the senior year the student shall be able to: A. Utilize appropriate theories and research findings from nursing and related fields in nursing practice B. Evaluate systematically the outcomes of care in a variety of settings based on the nursing process C. Apply knowledge of group dynamics while working with groups of clients, healthcare professionals and co-workers D. Demonstrate leadership skills in planning, managing, and evaluating care of clients E. Demonstrate responsibility and accountability to individuals, families, society at large, and personal professional growth and development F. Determine ethical, social, and political issues affecting the healthcare system in Lebanon

CURRICULUM AND COURSE REQUIREMENTS

The BSN curriculum totals 103 credits for students entering as sophomores and includes two summers of study. Students take courses in English, the Arts and Sciences, basic medical sciences, and nursing. Nursing courses include classroom teaching and clinical training in health-care settings. 12 credits electives in humanities that meet the general education requirement are required for graduation. Students will be asked to take half of the elective humanities from LIST I, and the other half from either lists I or II (check list of courses under GE section). The table below shows the curriculum plan, starting with the Freshman year

AMERICAN UNIVERSITY OF BEIRUT - FACULTY OF MEDICINE - SCHOOL OF NURSING

Freshman Courses:

- Natural Sciences: BIOL 105 or 106; CHEM. 102; GEOL 101, 102, or 103; PHYS 101, 103, or 200.
- Social Sciences: ECON 103; PSPA 101
- Humanities: ARAB 101 or 102; AROL 101; CVSP 110, 111, 112, or 150; ENGL 103, 104, 105, 106, 107, or 108; HIST 101 or 102; PHIL 101 or 102

⁂ Electives as necessary to add up to 30 credits in total

⁂ ◈ For Arabic speaking students; for others credits have to be replaced by an elective

GE Refer to List of courses & requirements under General Education section

Students will be asked to take half of the humanities and social sciences requirements from LIST I, and the other half from either lists I or II (check list of courses under GE section)

*Passing grade for NURS 203 is **60**

**Offered either fall or spring semester in the senior year

***Offered either fall or spring semester in the senior year

Students can take EDUC 225 instead of PSYC 210. EDUC 225 does not require any prerequisite.

Updated Sept. 2018

Course Descriptions

Nursing courses are numbered according to level and normally follow a sequence. Below is a list of all undergraduate nursing courses. To the right of the course title is a set of 3 numbers that indicate the following:

- The first number following the title of a course indicates the number of class hours per week.
- The second number indicates the number of clinical hours per week. (Please note that not all courses include clinical hours.)
- The third number indicates the number of credit hours applied toward graduation.

NURS 200 Introduction to Nursing 2.0; 2 cr.
Introduces concepts basic to the nursing profession. The nature of nursing as a profession, past, present, and future, is studied with a focus on the role of nurses in meeting the health needs of humanity throughout the health–illness continuum. *Fall and spring.*

NURS 201 Introduction to Nursing Practice 1.3; 2 cr.
This course introduces students to concepts and interventions basic to nursing practice. The course uses the nursing process as the organizing framework, and the concepts of health, nursing, client, and environment are integrated throughout. Performance of basic client care skills are emphasized, including the scientific rationale for both health promoting and health restoring nursing interventions. *Prerequisite: NURS 200; corequisite: HUMR 248. Spring.*

NURS 202 Health Assessment 1.3; 2 cr.
The course focuses on assessment of health across the life span and provides the student with the knowledge and skills needed to assess the health status of individuals from infancy to old age. Emphasis is placed on assessment of the physical, psychosocial, and cultural dimensions of the individual. The course includes lectures and practical experiences in the assessment of individuals to identify normal and abnormal findings. *Corequisites: NURS 201 and HUMR 248. Spring.*

NURS 203 Biotatistics for Nurses 3.0; 3 cr.
This course is designed to introduce the BSN students to the concepts and applications of statistics in the nursing field. The course starts with a general overview of probability, types of data, and ways to summarize and present them. The course then introduces the concept of hypothesis testing and the methods to carry them. Applications on the computer using the SPSS software will be discussed in class. *Summer.*

NURS 205 Foundation of Professional Nursing 2.0; 2 cr.
In this course students will explore recent issues affecting the nursing profession in terms of role expansion of the nurse. The nursing process is covered as an organizing framework for nursing practice.

NURS 210 Pathophysiology 2.0; 2 cr.
This course focuses on the biologic alterations that affect body dynamic equilibrium or homeostasis. The content of this course is organized into three areas of focus based on the health–illness continuum: 1) control of normal body function 2) pathophysiology or alteration in body function 3) system or organ failure. *Prerequisites: BIOC 246, HUMR 248, and MBIM 237. Summer.*

NURS 300 Nursing Care of Adults I, Theory and Practicum 2.8; 5 cr.
This course covers scientific principles in the care of adults presenting with medical-surgical problems. It builds on the framework of man, environment, health and nursing. The practicum provides students with opportunities to apply knowledge in clinical practice. *Prerequisites: NURS 202 and NURS 210; corequisite: PHRM 240. Fall.*

NURS 302 Nursing Care of Adults II, Theory and Practicum 2.8; 5 cr.
This course is a continuation of NURS 300. Emphasis is placed on the following dysfunctions: metabolic and endocrine, neurologic, eye ear nose and throat, renal and urinary, integumentary, hepatic and biliary, rheumatic, as well as the infectious process. *Prerequisites: PHRM 240 and NURS 300. Spring.*

NURS 304 Nursing Care of the Expectant Family, Theory and Practicum 2.8; 5 cr.
This course focuses on reproductive health, from conception to the neonatal period. The content stresses the nurse's role in reproductive health and risk management. The practicum provides clinical application of knowledge, focusing on women in the childbearing cycle, the newborn, and families as clients in the hospital and outpatient settings. *Prerequisites: NURS 202 and NURS 210; corequisite: PHRM 240. Fall.*

NURS 306 Nursing Care of Children, Theory and Practicum 2.8; 5 cr.
This course focuses on the care of children, from infancy through adolescence. Topics include ambulatory and in-patient care, as well as primary, secondary and tertiary care. The practicum provides the students with opportunities to assess health needs of children based on knowledge of growth and development, and to implement nursing care, based on the nursing process. The roles of nurse as teacher, patient advocate and nurturer are emphasized. *Prerequisites: PHRM 240, NURS 304, and PSYC 210. Spring.*

NURS 307 Practicum I 0.6; 0 cr.
This course is designed to provide students with opportunities to practice advanced nursing skills learned in previous nursing courses, and builds on experiences gained in the sophomore and junior years. *Prerequisites: NURS 302, NURS 304, and NURS 306. Summer.*

NURS 308V Maternal Child Nursing, Theory and Practicum 3.8; 6 cr.
This course focuses on the childbearing family from conception to the newborn period as well as primary and tertiary care of the ill child from infancy to adolescence. The clinical component emphasizes the application of knowledge acquired in class in the care of the childbearing family and children with illnesses from infancy to adolescence.

NURS 311V Nursing Care of Adults, Theory and Practicum 3.8; 6 cr.
Facilitates the development of advanced knowledge and application of scientific principles in the care of clients representing medical–surgical problems of the adult population. This course builds on the framework of person, environment, health status, and nursing. The clinical component provides an opportunity for advanced clinical application of concepts discussed in class in the care of patients and their families.

NURS 312 Mental Health and Psychiatric Nursing, Theory and Practicum 2.8; 5 cr.
The holistic philosophy of clients as bio–psycho–social entities is stressed in both mental health and mental illness. General theories of psychiatry and mental health therapies are presented. The course provides clinical experience in psychiatric–mental health settings. Emphasis is placed on the quality of coping abilities of clients in varying degrees of stress and crisis.

Opportunities are provided for students to work collaboratively with multi–disciplinary health teams to assess, plan, and implement relevant nursing interventions in both mental health and illness. *Prerequisites: SOAN 201 and PSYC 201. Fall and spring.*

NURS 313 Leadership and Management in Nursing, Theory and Practicum 3.6; 5 cr.

This course discusses concepts of leadership, management, creativity, analysis, power, change, and evaluation. Students investigate, analyze, and conceptualize the different modalities of leadership, utilizing nursing and management theories. The practicum allows the student to explore his/her role as a potential leader. The learner observes and assists in the practice of different modalities of leadership and managerial skills in a variety of health care settings.

NURS 314 Community Health Nursing, Theory and Practicum 2.8; 5 cr.

The course provides knowledge in the broad area of the field of nursing, public health, and primary health care. The levels of prime concern are the small group, including the family and its individual members, and the large group, including the community. The focus of the clinical component is on the promotion and maintenance of high levels of health and well-being, and prevention of illness and disability. *Fall and spring.*

NURS 400 Critical Care Nursing, Theory and Practicum 2.6; 4 cr.

This course focuses on the care of clients with critical care problems. Emphasis is placed on cardiovascular and respiratory problems, neurologic disturbances, shock, sepsis, metabolic and endocrine imbalances, altered nutrition, renal failure, emergency and disaster nursing. The practicum provides opportunities to apply knowledge in clinical settings. *Prerequisites: NURS 302 and NURS 307. Fall.*

NURS 402 Mental Health and Psychiatric Nursing, Theory and Practicum 2.8; 5 cr.

This course provides the mental health setting for self-awareness and therapeutic use of self in effective communication. The holistic philosophy of clients as bio-psycho-social entities is stressed in both mental health and mental illness. General theories of psychiatry and mental health therapies are presented. The practicum provides clinical experience in psychiatric-mental health settings. Emphasis is placed on the quality of coping abilities of clients in varying degrees of stress and crisis, with experiences in working with multi-disciplinary health teams to assess, plan, and implement relevant nursing interventions. *Prerequisites: Senior standing, SOAN 201, and PSYC 201. Fall and spring.*

NURS 404 Nursing Informatics 2.0; 2 cr.

This course focuses on the history of health care informatics, basic informatics concepts, and health information management applications. The student progresses from developing knowledge of basic concepts and methods of health care informatics; to learning about specific information management applications in health care administration, practice, education, and research; and finally to a hands-on experience with a specific application of his/her own choosing. *Prerequisite: consent of instructor. Fall.*

NURS 405V Critical Care Nursing, Theory and Practicum 2.6; 4 cr.

This course addresses the management of critically ill adults. Emphasis is placed on diagnostic reasoning, interventions, and outcome assessment in patients presenting with complex cardiovascular, respiratory, renal and metabolic problems, as well as trauma. The clinical component provides experiences where students apply concepts learned in class in critical care

areas in the hospital. *Prerequisite: NURS 311V.*

NURS 406 Nursing Research 3.0; 3 cr.
Focuses on the process involved in the scientific approach and its application to nursing. Special emphasis is on the basic research steps, the research design, assessment measures, and data analysis with a focus on research utilization. *Prerequisite: NURS 203. Fall.*

NURS 408 Community Health Nursing, Theory and Practicum 2.8; 5 cr.
This course provides knowledge in the broad field of nursing, public health, and primary health care. The levels of primary concern are the small group, including the family and its individual members, and the large group, including the community. The practicum provides field practice through collaboration with other health professionals in primary care settings, with focus on health promotion, maintenance, and the prevention of illness and disability. *Prerequisite: Senior standing. Fall and spring.*

NURS 410 Leadership and Management in Nursing, Theory and Practicum 3.6; 5 cr.
This course discusses how professional nursing incorporates the concepts of leadership, management, creativity, analysis, power, change, and evaluation. In this course students investigate, analyze, and conceptualize the different modalities of leadership, utilizing nursing and management theories. The practicum allows students to explore their role as potential leaders. Students observe and assist in the practice of different modalities of leadership and managerial skills in a variety of health care settings. *Prerequisite: Senior standing. Spring.*

NURS 411 Intensive Practicum in Area of interest 0.9; 0 cr.
This course focuses on preparing students towards their transition to professional nursing practice. Opportunities are provided for students to synthesize knowledge and refine skills acquired in the planning, provision and evaluation of nursing care, communication, and interdisciplinary practice in a clinical area of their interest. Consent of instructor is required for the site of clinical practice. *Prerequisite: Senior standing. Spring.*

IPEC 300 Interprofessional Education and Collaboration 1.0; 1 cr.
This is a required course for third-year medical, senior undergraduate nursing and Masters of Public Health students, and it aims at demonstrating how population health is best promoted and safe, patient-centered care is best provided through a collaborative health teams approach. The course will be based on cases designed by faculty members belonging to the three aforementioned disciplines, on topics on which inter-professional partnership is necessary. Discussion groups combining students from all three professions will be moderated by faculty members from the three professions. Students will learn the roles and responsibilities of other health professions and how to function in interprofessional teams. *Senior Standing*

ACADEMIC RULES AND REGULATIONS

Categories of Students

Full-Time Students

To be considered a full-time student, a student must carry a minimum load of 12 credits per semester. (Students can register for up to 17 credits per semester.) During the summer session, full-time students are required to take 9 credits. Registering for more than 17 credits (or 9 credits during the summer) requires the approval of the School of Nursing Director.

Part -Time students

These include the following categories:

- AUB staff members who are working toward a degree.
- Those who need to complete less than 12 credits for an undergraduate degree.
- Those who are granted permission by the appropriate faculty committee for health or family reasons to take less than a full course load.

Supervision

Each student will be assigned an academic adviser in his/her first semester who will guide the student on academic matters throughout his years of study. The adviser must be consulted and approve the student's schedule each semester. Students can find out the name of their advisers on the Student Information System (SIS).

Attendance

CLASSES AND LABORATORIES

Students are expected to attend all classes, laboratories, and any other required activities. Absence by students, whether excused or not, from any class or laboratory session does not excuse them from their responsibility for the work done or from any announcements made during their absence.

Students who are absent from more than one fifth of the number of lectures of any course during a semester lose all credit for the course.

Students may not be excused from laboratory and field requirements. All missed clinical and field requirements must be made up. In case of repeated absences from clinical courses, over one fifth of the total hours, the student may be asked to drop the course.

All Nursing courses that contain clinical parts should have an Objective Structured Clinical Examination (OSCE) as part of course assessment

- A cumulative average of 70 and above should be scored on the exams, regardless of the total course grade
- Passing a course requires:
    - Scoring above 70 as total average on the theory part,
    - Passing the OSCE and
    - Passing the clinical part.

Examinations and Quizzes

- Students may not absent themselves from announced final examinations and quizzes unless they present an excuse considered valid by the coordinator of the course. The course coordinator may then require the student to take a make-up examination.
- Students taking non-nursing courses from the other faculties of the University are required to follow the attendance regulations of that faculty.

Computer Literacy

Undergraduate students are expected to have a basic level of computer literacy. Ability to use Microsoft Word and Power Point programs is a minimum requirement, since most courses require term papers and oral presentations. If you feel that you are weak in this area, please take advantage of the various free computer programs that the Academic Computing Center offers throughout the year. You can reach the computing center through the AUB website or by calling 2599.

Grading System

- The School of Nursing uses the following grading system:

Evaluation of the student's achievement will include their work in theory, practice, as well as professional attitudes and behavior.

Cumulative Average	GPA	Cumulative Average	GPA	Cumulative Average	GPA	Cumulative Average	GPA
‹60	0	67	1.86	75	2.73	83	3.46
60	1	68	1.98	76	2.82	84	3.54
61	1.13	69	2.09	77	2.92	85	3.63
62	1.26	70	2.2	78	3.02	86	3.7
63	1.38	71	2.31	79	3.11	87	3.78
64	1.5	72	2.42	80	3.2	88	3.86
65	1.63	73	2.52	81	3.29	89	3.93
66	1.74	74	2.62	82	3.38	›=90	4
I Incomplete							
P Pass Normally Used for Theses and Projects							
PR In Progress							
W Withdraw							
F Fail							

All final grades are expressed in multiples of one.

- The passing grade in all nursing courses is 70.

INCOMPLETE GRADES

- Incomplete course work will be reported as an "I" followed by a numerical grade that reflects the evaluation of the student available at the end of the semester.

- To secure permission to complete the work for a course, a student must submit a valid excuse to the instructor of the course and the Academic Committee within two weeks from the date of the final exam for the course.
- Students permitted to complete work for a course must do so within **four weeks** from the start of the next regular semester. When the incomplete work has been completed and evaluated by the instructor, the director of the school (upon the recommendation of the Academic Committee) will consider changing the course grade. If this is done, a new grade will be reported to the Office of the Registrar.
- If no valid excuse is presented and the work is not completed within the time limits specified above, the "I" will be dropped, and the numeric grade available becomes the final grade in the course.

REGISTRATION

Academic Year

The academic year at AUB is divided into two semesters, fall, and spring, followed by a summer session. Each semester has a reading period and a final exam period, followed by a break before the next semester.

Course Registration

New students should register on-line via the Internet in August prior to the start of the academic year. The registration procedure is explained during the orientation week that is usually held during August.

Drop and Add

After the start of classes, at a date indicated in the university calendar, students may make changes in their schedules through a process known as "Drop and Add". After obtaining the approval of their advisers, students may change their courses. Depending on the changes that are made, students may need to settle their accounts at the Office of the Comptroller to adjust their tuition fees according to the final number of credits registered.

Payment of Fees

Each AUB student must pay all his/her tuition fees and other charges levied.

1. All students must finalize registration, including payment of tuition fees according to the academic calendar for the first and second semesters. Under special circumstances, late registration will be permitted during a period of no more than five working days after the announced deadline, but subject to a late registration fee (***150, 000 L.L.).***
2. Students who demonstrate financial need may make formal application for deferred payment arrangements for tuition fees to the Office of the Comptroller according to the academic calendar for the first and second semesters. These students are still required to complete all registration formalities within the set deadlines. Deferred payments are not permitted for the summer session in any faculty.
3. A student who applies for deferred payment must pay at least 50% of the net amount of tuition due. All other charges must be paid in full with no deferrals by the set deadlines. A student must pay a deferred payment application fee of $33, whether approved or not.

4. Every student granted deferred payment must sign a statement indicating agreement that failure to complete payment by the set deadline will result in receiving no credit for the semester in which the student failed to pay.

Students are expected to meet all financial obligations by the set deadlines. The University reserves the right to place a hold on the student's record that will prevent registration for future semesters and the release of transcripts and diplomas, as well as access to other University services, if he/she fails to promptly meet his/her financial obligations to the University.
Please consult the Office of the Registrar (ext: 2570 /2571) or the Registrar's website: http://staff.aub.edu.lb/~webregist/ for up-to-date schedules for registration and payment of fees.

ACADEMIC PROGRESS

Promotion

Students shall be promoted at the end of the summer session after completion of **30 or more credits** beyond the requirements from the previous level. However, students who register in September and who lack 6 or fewer credits for completion of a class will be registered in the next higher class at the discretion of the academic committee. **In order to be promoted, students must attain a minimum average of 68 at the end of the second regular semester (sophomore year) and 70 in the following years.**

Placement on the Dean's Honor List

To be placed on the Dean's Honor List at the end of a semester a student must:

- Be a fulltime student (registered at least twelve credits of new courses other than those repeated
- Not be on probation.
- Have passed all courses taken during the semester, have an overall average of 85, or be ranked in the top 10% of the class and have an average of 80.
- Not have been subjected to any disciplinary action within the University.

Placement on Probation

In concordance with AUB policies, a student will be placed on probation for any of the following reasons:
if the student fails 6 or more credits at the end of a semester, and/or
if the student does not attain the minimum required semester average of 65 for the first regular semester of BSN II or 68 for the second regular semester of BSN II, or70 for the following years.

Students in their freshman and sophomore years will be placed on probation at the end of their first semester only if they fail in one half or more of the credit hours carried.
These regulations do not apply to part-time students until they have completed at least 12 credits. For part-time students, a semester is defined as consecutive courses totaling 12 credits.

Removal from Probation

Action to remove probation at the end of a semester will be taken provided the full-time student:

- has passed all courses taken during the semester;
- achieved the minimum required average for that semester; and
- achieved the minimum yearly average required.

A student is expected to be removed from probation within two regular semesters.

Repeating Courses

- A student may repeat a course with the consent of the adviser and course coordinator.
- A student must repeat all required courses that he/she fails.
- When a course is repeated, the highest grade obtained will be considered in the calculation of the cumulative average.
- In exceptional cases, a student may be allowed to take a make-up exam for a course failed, within four weeks from the start of the next regular semester. S/he must have the approval of the course coordinator and the Academic Committee in order to do this.
- Repeating a course may delay the student's graduation from the program

Repeating the Year

The Academic Committee may require a student to repeat the year if he/she

- Fails in one-third or more of the credit load attempted during that year; or
- Fails to remove probation within two semesters; or
- Fails to obtain the minimum yearly average.

A student repeating the year must register for a full load and repeat all courses in which he/she has scored below the minimum required for that year.

Dismissal from the School of Nursing

A student may be **dropped from the BSN program** by vote of the faculty upon the recommendation of the Academic Committee for any of the following reasons

- fails to remove probation within two regular semesters;
- fails in one-third or more of the load attempted during that year and fails to attain the minimum yearly average;
- fails to satisfy the requirements of a repeated year; or
- is not making satisfactory academic progress, has not shown sufficient professional promise, or has behaved in a manner below the norms expected by the school.

Once the student is dropped from the BSN program, he/she will be placed as Majorless for 2 consecutive regular semesters to secure a transfer to another faculty. Failure to do so will lead to the students' **Dismissal from The Hariri School of Nursing**

Application for Readmission

When, in accordance with university regulations, a student is dropped, the implication is that the student is not qualified to continue his/her education at the School of Nursing. Consideration for readmission is given for one of the following reasons:

- If the student was not able to do his/her work efficiently because of health reasons. In such cases, the school will require a medical report from the university physician.

- If the student's adviser or a faculty member or administrative official of the University knows of certain family problems that may have influenced the academic achievement of the student.
- If, after spending one or two years at another institution, the student is able to present a satisfactory record and recommendation.

Ordinarily, supporting documents for the first two reasons must be presented within 30 days of when the student is dropped from the school, but in exceptional cases this presentation may be made at the beginning of the following regular semester.

If a student is on probation and leaves the University after the tenth week of the semester, the Academic Committee will decide whether he/she may be allowed to return to the University.

AWARDS, FINANCIAL AID AND SCHOLARSHIP

AWARDS

A number of awards are given to students who demonstrate exceptional academic achievement. The awards and related criteria are:

Penrose Award

This is a non-cash award that is made to an outstanding graduate of the school on the basis of scholarship, character, leadership, and contribution to university life.

Women's Auxiliary Awards

Cash and certificate awards are granted to senior students who meet the following criteria: academic achievement, professional integrity, and seriousness of purpose, contribution to professional and university life, and willingness to work at the AUB Medical Center after graduation. The awards are:

- Emily Asfour
- Mary Crawford (Florence Nightingale)
- Agnes Shammaa
- Laila Iliya
- Helen Zarwi
- Nada Alameddine Kanso
- Najla Morston
- Jacqueline Rubeiz
- Hanneh Shahine
- Ann Smith

Lions Award

This is a non-cash award, granted to a student who has been commendable for academic achievement and professional integrity.

Women's Auxiliary Contracted Scholarship: Annette Hajjar Scholarship.

The recipient of this award is required to work at the AUB Medical Center for a period of two years.

Janet Haddadin Nursing Award

The Janet Haddadin Nursing Award of $1000 is granted to a graduating undergraduate nursing student with the highest Cumulative GPA in Nursing"

Financial Aid and Scholarships

AUB offers financial aid to qualified students in the form of need-based financial aid grants, merit scholarships, and student work-study. Nursing students can also apply for a bank loan through the Office of Financial Aid.
Students applying for financial aid for the first time may obtain applications from the Office of Financial Aid in West Hall. Applications must be submitted before the deadline, which can be found at the website: http://staff.aub.edu.lb/~webfaid/ Financial need is assessed for each

student annually on the basis of factors such as family income, number of siblings enrolled in school/university, assets such as home(s), and other property, and major changes in financial status. Financial need is a necessary—but not a sufficient condition—for an award. Students with high need and excellent scholastic achievement records are more likely to receive awards than students with low need and average scholastic records.

The Hariri School of Nursing is offering 60% (Financial Aid+HSON scholarship) to full time students who show commitment to nursing and who have a good academic standing. In addition, these students might be eligible to request a 30% bank loan that can be paid back after graduation over a period of 10 years. The students can also apply for the work study program to cover the remaining 10% of the tuition fees. Each student should submit a financial aid application at the office of financial aid to be eligible for this scholarship.

Other scholarships are available for Nursing students and awarded based on financial need and academic performance.

GENERAL POLICIES AND INFORMATION

Non-Discrimination Policy

AUB encourages a diverse student body and workforce, and is committed to the principle of equal opportunity in education and employment. In the administration of its educational, admissions, and employment policies, and other university programs and activities, AUB does not discriminate on the basis of race, color, religion, age, national or ethnic identity, gender or gender identity, marital status, disability, genetic predisposition or carrier status, alienage or citizenship status, political affiliation, or any legally protected characteristic, except as required by Lebanese law.addition, in compliance with Title IX of the US Education Amendments of 1972, which prohibits sex discrimination in education and interprets sex discrimination as including sexual harassment and sexual violence, the University maintains a Title IX coordinator in the Office of the Provost and may appoint deputy Title IX coordinators as needed. Inquiries and complaints regarding sex discrimination, sexual harassment, and sexual violence may be directed to the Title IX coordinator, College Hall, 5th Floor, Beirut, Lebanon, or by email at integrityofficer@aub.edu.lb. The Office of the Provost maintains a resource page on Non-Discrimination, Harassment, and Title IX at www.aub.edu.lb/titleix. AUB will provide reasonable accommodation consistent with the law to members of the AUB community with a disability. What constitutes a reasonable accommodation depends on the circumstances and, thus, will be addressed by AUB on a case-by-case basis.

Academic and Professional Integrity

The Rafic Hariri School of Nursing follows AUB policy regarding the academic conduct of students. **The faculty and staff at the Hariri School of Nursing take all issues related to academic and professional integrity extremely seriously.**
Students are expected to have high standards of integrity in both the clinical and academic settings. Integrity is a reflection of self-respect and is demonstrated by a student's behavior in class and in the clinical setting.
Academic integrity and honesty are central components of a student's education. Ethical conduct at the University will be carried into the student's professional career.
Academic dishonesty, including but not limited to cheating and plagiarism, is deplored and not tolerated. Any act of cheating may be ground for probation, suspension, and/or expulsion from the school. Any act for plagiarism may be grounds for a failing grade on the paper and in the course. In addition, other sanctions may be imposed by the school for acts of academic dishonesty.

In clinical settings, students are expected to protect patients' confidentiality, and to be honest in any documentation regarding the patient's condition and their own assessment and interventions. Students are expected to maintain high professional standards, including being physically, intellectually, emotionally and academically prepared when caring for patients.

Student Code of Conduct (http://pnp.aub.edu.lb/general/conductcode/index.html)

The purpose of this code is to provide students with a clear statement of the standards of behavior expected in an educational environment, so that they make responsible choices

regarding their participation in the academic community and understand the consequences of their infringement of these standards. Violations may be of an academic or non-academic nature.

Jurisdiction of academic violations lies initially under the authority of the Dean of the faculty or school to which the student belongs. Misconduct that is clearly non-academic falls under the jurisdiction of the Dean of Student Affairs who will take the necessary action in consultation with the Dean(s) of the faculty or school to which the student belongs.

The following are examples of actions deemed in violation of the Student Code of Conduct; they are not intended to define misconduct in exhaustive or exclusive terms. Any student who violates the principles described in the preamble to this document shall be subject to disciplinary action in accordance with the Student Code of Conduct.

I. Definitions of Misconduct

A. Academic Misconduct

Offences involving academic misconduct include, but are not limited to, the following:

1. Cheating

While taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, cell phones, or another's work.

Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

2. Plagiarism

Whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.

3. In-Class Disruption

Students in class are expected to behave appropriately, and shall not disrupt classes or exams by extraneous conversation and/or misbehaving.

4. Dishonesty

Students are expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).

b. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).

c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

d. Stealing or damaging library books.

e. Unlawfully copying computer software.

f. Engaging in bribery of any kind.

B. Non-Academic Misconduct

1. Disruption/Obstruction

Students have the right to express their opinions on matters of concern to the University in an organized manner and in a public space, excluding residences on campus, but they must notify and consult with the Dean of Student Affairs before doing so. The nature of the event and any publicity accompanying it must be reviewed by the dean to assure that neither Lebanese law, nor university policies and norms are being violated.

In cases where student-sponsored events, including protests, sit-ins, and demonstrations are, after such consultation, not approved by the Dean of Student Affairs, or, if needed by the Board of Deans or the president, it may become necessary for the dean of student affairs to undertake disciplinary measures and even to instruct campus protection to bring the public gathering to an end.

Disrupting or obstructing the normal educational process or any university function or activity by student demonstrations, sit-ins, or 'strikes' is strictly prohibited. This includes, but is not limited to: disrupting classes, library operations, seminars, exhibitions, meetings, ceremonial events, or examinations; impeding or preventing others from attending such events; falsely activating a disaster alarm; or making a threat.

Under no circumstances are any members of the university family to be intimidated or threatened in the execution of their normal duties and responsibilities. That means that students and faculty who wish to hold or attend classes or to go to their offices or places of study shall not be prevented from doing so; non-academic staff and administrators shall not be impeded from going to their places of work.

2. Distribution of Unauthorized Published Material

The public distribution and posting of published materials such as fliers, leaflets, posters, audiovisuals, etc., must be approved and stamped by the Dean of student Affairs. The campus protection office will remove from display any such unauthorized material.

Students must not distribute, possess, store, or use, on campus or at a university-authorized event off campus, any kind of weapon, device, explosive, dangerous chemicals, hazardous materials, or any other instrument designed to do bodily harm or to threaten bodily harm. Instruments used to simulate such weapons, which endanger or tend to endanger any person, shall be considered weapons.

Students are also prohibited from distributing, possessing, storing, transferring, selling or attempting to sell, delivering, using or attempting to use, any illegal drugs, narcotic or hallucinogenic, on campus or at any university-authorized event off campus.

3. Theft

Stealing on campus or at a university-authorized event off campus, including unauthorized use of university equipment or services (e.g., telephones, photocopiers, or computer facilities), or possession of stolen property, is prohibited.

4. Destruction of Property/Endangering Public Safety

Students are expected to protect university property and to respect the safety of others. Acts contrary to these principles, which include, but are not restricted to, the following, are subject to disciplinary procedure:

a. Engaging in vandalism or other intentional damage (such as spray painting or graffiti) to property on campus or at university-authorized events off campus.

b. Littering, such as disposing of waste (empty bottles, cigarette butts, food containers, etc.) in other than designated places on campus.

c. Unjustified discharge, damaging, or tampering with any fire extinguisher, fire alarm, or other safety devices.

d. Taking, or attempting to take, action that damages or could damage private property, without the consent of the owner or person legally responsible.

e. Appropriating, or attempting to appropriate or possess, private property, without the consent of the owner or person legally responsible.

f. Unauthorized entry, unapproved duplication of keys or use of such, or unauthorized use of campus facilities.

5. Mental or Physical Harm

Acts that inflict mental or physical harm are prohibited, including the following:

a. Engaging in physical aggression including, but not limited to, assault.

b. Engaging, or attempting to engage, in intimidation, coercion, extortion, blackmail, or bribery; bullying; threatening violence, injury, or harm to others on campus or at university-authorized events off campus; endangering or tending to endanger the safety, health, or life of any person.

c. Engaging in behavior that creates a substantial risk of, or results in, injury to others, such as committing arson or causing a riot.

d. Using force, inciting violence, inflicting or attempting to inflict injury to others on campus or at a university-authorized event off campus.

e. Engaging in any activity that endangers the health and safety of an individual or demeans an individual in conduct of an unbecoming or humiliating nature, or in any way that detracts from an individual's academic pursuits.

6. Possession of Dangerous Weapons or Materials

Students must not distribute, possess, store, or use, on campus or at a university-authorized event off campus, any kind of weapon, device, explosive, dangerous chemicals, hazardous materials, or any other instrument designed to do bodily harm or to threaten bodily harm. Instruments used to simulate such weapons, which endanger or tend to endanger any person, shall be considered weapons.

Students are also prohibited from distributing, possessing, storing, transferring, selling or attempting to sell, delivering, using or attempting to use, any illegal drugs, narcotic or hallucinogenic, on campus or at any university-authorized event off campus.

7. Discrimination and Harassment

Students are not allowed to discriminate on the basis of race, gender, age, religion, national origin, ethnic origin, marital status, mental or physical disability. Nor shall they harass, intimidate, insult, or threaten others whether verbally, in writing, or through electronic means.

Engaging in sexual harassment, e.g., requests for sexual favors, unwelcome sexual advances, unwelcome physical contact of a sexual nature, spoken comments or abuse (including email) of a sexual nature, and the public display of sexually suggestive objects or pictures is prohibited (refer to the University Policy Against Discrimination and Harassment).

8. Smoking and Alcohol

The consumption of alcohol, on campus, by students is not permitted. Smoking is not permitted in university buildings other than private residences and those areas within the student dormitories, as may be designated from time to time by the Dean of Student Affairs (refer to the University Policy on Smoking). Students must abide by the following:

- Smoking is not permitted in any University building, including the Medical Center, except for private residences and student dormitory rooms, as may be designated by the Dean of Student Affairs. Smoking is prohibited in all dormitory common rooms, corridors, lavatories, and other public spaces. Smoking is prohibited in all university vehicles.
- Persons smoking in outside open areas, or in private residences, or in designated dormitory rooms where smoking is permitted, are required to ensure that smoking materials are disposed of in a tidy and safe manner. On no account are cigarette butts to be disposed of on the ground or thrown into the wooded or landscaped areas.
- All persons on AUB property are expected to respect this Smoking Policy. Breaches of the Policy should be reported to the Environmental Health and Safety Center,

extension 2360. Persons who are found to have breached the Policy will be subject to disciplinary actions.

9. Inappropriate Sexual Behavior

Publicly engaging in sexual behavior is prohibited as deemed by Lebanese law.

10. Use of Computers

Accessing protected computer accounts or other computer functions, knowingly transmitting computer viruses, and unethical use of AUB access is prohibited (refer to the University Policy on the Use of Computers).

II. Jurisdiction over Violations

AUB holds all students responsible for actions occurring on campus and at the AUB Farm, the AUB medical center, and university-authorized events.

Students attending an off-campus function as representatives of the University (such as, but not limited to, students serving on academic or athletic teams or engaging in club activities) are subject to disciplinary sanctions for violations of this code.

III. Disciplinary Actions

Disciplinary action will be imposed according to the nature (academic or non-academic) and severity level of the violation.

A. Academic Misconduct

In principle, enforcement of disciplinary actions for academic violations is carried out by those immediately responsible.

It is the responsibility of the faculty to uphold university policies. Thus, the immediate responsibility for dealing with instances of cheating, plagiarism, and other academic violations rests with the faculty member. If a faculty member has good reason to believe that a student has violated academic standards, it is his or her responsibility to discipline the student expeditiously. A faculty member who has good reason to believe that a student has violated academic standards must give a grade of zero on the exam or assignment where the violation occurred.

When the instructor has taken disciplinary action, he or she should send a letter to the Student Affairs Committee in the faculty or school in which the student is enrolled, informing that committee of the incident and the action taken. A copy of the letter will be placed in the student's file, as well as forwarded to the student's advisor for follow-up.

B. Non-Academic Misconduct

Violations of a non-academic nature are the responsibility of the Dean of Student Affairs, in consultation with the dean of the faculty or school in which the student is enrolled and, as necessary, the chief of campus protection. Students should know that the laws of

the Republic of Lebanon apply on campus, and those who violate these laws may be subject to criminal prosecution.

C. List of Primary Disciplinary Actions

Documentation of disciplinary actions, other than suspension and expulsion, will not become part of the student's permanent record. Records of the University Disciplinary Committee decisions, including charges and sanctions, will be maintained as part of the confidential records in the office of the respective Dean, for a period of up to four years after the student graduates or ceases to be a student.

D. Required Withdrawal from Campus Pending Hearing

In extraordinary circumstances, when the student's continued presence is deemed a danger to the university community, the student will be required to withdraw from the campus, pending a meeting of the University Disciplinary Committee. This action shall normally require the approval of the president of the University.

E. Secondary Disciplinary Actions

In addition to the disciplinary actions listed above, the following secondary disciplinary actions may be imposed upon those who violate the Student Code of Conduct. Secondary disciplinary actions may be of an academic or non-academic nature

IV. Complaint Procedure

Any person subject to, or who witnesses, a violation of the Student Code of Conduct should forward a written complaint to a faculty member, a chairperson, or any university official. Academic violations shall be forwarded to the dean of the faculty to which the student accused of the violation belongs. Non-academic violations shall be referred to the dean of student affairs. Violations that may require suspension or expulsion will be referred by the concerned dean to the University Disciplinary Committee.

The University Disciplinary Committee will deal with alleged violations in a manner that ensures that those charged with a violation the committee may take into consideration the student's cumulative discipline record.

Range of Actions

Informal Warning

This may be oral or written. It is a statement that the student has inadvertently violated a university regulation. The warning will be recorded in the respective Dean's records and the student will be documented.
Examples: *Littering and smoking in prohibited areas.*
Reprimand

This will be in writing. It is a statement that the student has violated a university regulation. It is intended to communicate most strongly, both the disapproval and the reprimand of the university community. The reprimand will be kept in the respective Dean's records.
Examples: *Inadvertent plagiarism - failure to cite sources appropriately, and inappropriate physical contact.*
Dean's Warning

This will be in writing. Only two Dean's Warnings are allowed in a student's academic career at AUB. It is recommended that any violation of university regulations after the second Dean's Warning results in consideration of suspension. Such a warning is kept in the file of the student and the respective Dean's records.
Examples: *Plagiarism, academic dishonesty, disruption-obstruction, mental or physical harm, discrimination and harassment.*
Suspension

This will be in writing and will form part of the student's permanent record. A student will be suspended for a fixed period of time during which the student may not participate in any academic or other activities at the University. At the end of the suspension period, the student may be readmitted to the University, only upon the recommendation of the University Disciplinary Committee.
Examples: *Cheating, theft, and destruction of property.*
Expulsion

This will be in writing and will form part of the student's permanent record. Expulsion denies the student the right to participate in any academic or other activities of the University for an indefinite time. Only under the most unusual circumstances, and upon the recommendation of the University Disciplinary Committee, will an expelled student be readmitted to the University.

Examples: *Academic dishonesty, possession of dangerous weapons or materials, and endangering public safety.*

N.B. Any person who maliciously lies to cover up an act sanctioned by the code of conduct will be considered to be an accessory after the fact and may be subject to disciplinary action.

Secondary Disciplinary Actions – Academic

The student may be prohibited from participating in the work study program.

The student may be prohibited from receiving any form of financial aid, scholarship, or monetary award.

The student may be prohibited from receiving any form of honor, merit award, or other academic recognition award.

The student may be prohibited from holding a graduate assistantship.

The student may be given a failing grade in a course or a test or any other form of academic assessment.

Secondary Disciplinary Actions – Non-Academic

The student may be prohibited from representing AUB in any official role, activity, or event.

The student may be prohibited from serving as an officer of any AUB organization including club, team, or society.

The student may be prohibited from living in any AUB hall of residence or similar facility.

The student may be strongly advised to attend treatment or counseling as determined by the director of the counseling center, in consultation with the Dean of Student Affairs.

The student may be required to make financial restitution.

The student's case may be referred to an external agency for further action (this could include the filing of criminal charges).

V. Formal Hearing by the University Disciplinary Committee

The University Disciplinary Committee will deal with alleged violations in a manner that ensures that those charged with a violation understand the charge and the evidence against them and are afforded a reasonable right of rebuttal.

The University Disciplinary Committee shall inform the student of the charge in writing. Evidence shall be presented in the presence of the student who shall have a reasonable right of rebuttal including the right to cross-examine witnesses. In determining penalties, the committee may take into consideration the student's cumulative discipline record.

VI. Appeal Procedure

Any student who is charged with a disciplinary offense has the right to a full and fair hearing for any disciplinary charges brought against him or her under university regulations.

If any of the following apply, a student may appeal to the Dean of the faculty or school regarding faculty or departmental decisions, or to the University Disciplinary Committee against disciplinary action taken by the Dean of Student Affairs or the dean of the faculty or school to which the student belongs:

1. Procedural error
2. New evidence
3. Unsupported conclusion
4. Disproportionate sanctions

The outcome of this appeal may result in higher, lower, identical, or no sanctions at all being imposed. The University Disciplinary Committee's decision shall be final.

Students Rights and Responsibilities

Students are members of the academic community and are also citizens. As citizens, students enjoy the same freedom of speech and right to petition that all citizens enjoy. Students have the responsibility to know and obey Lebanese law and the laws of the University. It is the responsibility of the student to know institutional regulations, policies, and established guidelines as stated in this handbook and in the University Catalogue. Students are accountable for their behavior at all times. Students have the right to freedom from discrimination on the basis of race, color, religion, sex, and age. Students have the right to be informed, in writing, of the expected behaviors and standards by which they will be evaluated prior to participating in classrooms and clinical activities. Students have the right to academic evaluations which are not prejudiced and which are based on stated course requirements. As members of the academic community, students are free, individually or collectively, to voice constructive criticism through identified channels on issues of institutional policy, curriculum, and matters of general interest to the student body without fear of reprisal.

While under the direct supervision of an instructor, students also have the right to adequate safety precautions provided by the School of Nursing. Students also have the right to negotiate participation in clinical situations which they feel are threatening to their personal health or life. Students, individually or collectively, have the right to expect, within a reasonable length of time, feedback concerning all student related issues presented to the faculty.

Freedom in the Classroom

Students are responsible for the content of the courses in which they enroll. They are also free to take reasoned exception to the data or views offered in any course of study, and reserve judgment about matters of opinion.
Students are responsible for complying with standards of academic performance required by each course in which they are enrolled. Such standards shall be communicated clearly in writing on or before the first meeting of each course. Students should have protection against prejudiced, arbitrary, and capricious academic evaluation.

Student Representation on Rafic Hariri School of Nursing Committees

Student representation on Rafic Hariri School of Nursing committees is encouraged. Students can request that items be placed on the agenda of any School of Nursing committee for discussion.

UNIVERSITY SERVICES

Student Services at the Rafic Hariri School of Nursing

Getting in Touch with the Right People at the Rafic Hariri School of Nursing

Students are encouraged to communicate any concerns they might have to the appropriate persons. They can refer to the Student Services Officer for the following issues:

- Answering queries about the BSN and MSN programs
- Student orientation and advising
- Follow up on different awards and scholarships available to nursing students
- Problems in registration (opening capacity, removing restrictions, resolving time conflict problems, removing holds, selection of elective courses, drop and add courses)
- Dealing with the administrative body (Registrar's office, Office of Financial Aid, Office of Student Affairs and specific committees at HSON)
- Writing and submitting petition letters (underload/overload credits, late registration, medical reports, course withdrawal, reactivation and readmission etc.)
- Selection of specific academic forms for internal and external procedures
- Program evaluation and satisfaction surveys
- Career guidance and work opportunities
- Student related activities such as student elections, NSS activities and graduation parties etc.
- Requesting credentials after their graduation.

The Student services office seeks to assist and guide nursing students to develop their plan to academic success, by referring them to the appropriate resources and procedures, and ensuring that they are complying with AUB academic rules and regulations.

Issues related to a particular course are best discussed with the course coordinator. Problems with a student's academic progress should be followed up with the assigned advisor. Students may discuss issues related to a particular class with their advisers. There is one class advisor for each of the three years: BSN II, BSN III, and BSN IV. If the student cannot resolve problems with the course coordinator, adviser, or class adviser, he/she should talk to the BSN coordinator, and then the BSN convener. If necessary, issues are referred to the Director of the School.

Other services offered at HSON:

- Requesting lockers at the locker room
- Requesting badges
- Requesting name pins
- Completing the Clearance process upon graduation or withdrawal from the university
- Facilitating colloquium papers

Simulation and Clinical Competency Center (SCCC)

The Simulation and Clinical Competency Center (SCCC) was established by the Hariri School of Nursing in 2009 to assist AUB students, faculty and healthcare practitioners to achieve higher levels of competence and safer patient-care. Individual students use the Lab facility for self-appraisal; faculty uses it for evaluation purposes and our hospital partners (AUBMC) use it to

enhance clinical practice.

Introduction to Simulation

Simulation started with the aviation industry and it improved pilot performance and airline safety. Simulation is defined as the deliberate creation or imitation of a situation for the purpose of learning using different techniques and technologies.

Simulation in healthcare education is considered an effective tool in clinical teaching. Simulation has the potential to provide immersive, interactive, reflective team-learning experiences in a controlled environment. In simulated environment students learn practical skills (e.g., medication injection), communication skills (obtaining patient history) to critical thinking and decision making skills regarding the care of the simulated patient. The tools of simulation range from single body part, as an arm for injection, to full-body mannequin that are physiologically responsive, to actual people playing the patient's role.

Who Uses SCCC Lab?

- AUB students from nursing, medicine, pharmacy and other health related disciplines
- AUBMC practitioners from all disciplines
- Non-AUB health-care students and practitioners after securing a special permission

Why Use Simulation?

- Safe learning environment: Simulation presents a safe learning experience for healthcare students and practitioners (It is a safe place to make mistakes and learn from them - the patient can't be harmed!)
- Increase in skill development: Simulation offers a chance to practice a skill repeatedly until mastery (with or without instructor guidance)
- Builds effective healthcare teams: Simulation brings people from different healthcare disciplines to work together as a team- a requirement for safe patient care

Location and Hours of Operation

Located on the 2nd floor of the Hariri School of Nursing, the SCCC is composed of 5 spacious rooms which can be used for classrooms, skills training and physical assessment. One room is designated for high fidelity scenarios (houses the highly interactive manikin) and includes a control area and a debriefing space.

The SCCC is open Monday to Friday from 8 am to 5pm during the academic year.

Booking Ahead Of Time

All are urged to book the Lab ahead of time. Priority in booking the SCCC is given to educational programs for AUB nursing and medical students. To schedule a session at the Lab, the student/learner must send an email to the Lab coordinator (Randa Farha rf37@aub.edu.lb). The coordinator in turn will confirm by email based on Lab availability. Any changes to an existing request for a session at the SCCC must be submitted by email to the Lab coordinator.

Code of Conduct

The following are binding practices for everyone using the SCCC facility (faculty, clinical teachers and students):

- No food or drink is allowed at any time in the Lab.
- No personal items are to be placed on the beds.
- Wash hands before coming to the center – use available alcohol-based hand sanitizers.
- Sign in at all times for both practice and testing on the attendance sheet
- Treat manikins like people. Treat simulators with respect as if they were real patients- handle them gently and with care.

- Only manikin lubricant can be used on the simulators when inserting objects (e.g. catheters).
- Never use ink pens at the bedsides as ink permanently stains the manikins. Please use pencil or only write at the tables at the end of the bed
- Gloves must be worn when coming in contact with the simulators (SimMan, SimBaby and NOELLE).
- Leave the center in the same condition it was when you first started (place all the chairs back at the tables, make the bed and return all equipment and supplies to the area where found).
- Sign a confidentiality agreement not to disclose any of the proceedings of a scenario outside the Lab. Report any violation to faculty.

Definitions

Effective simulation-based learning experiences are structured to include a pre-brief and a debrief component. The following are important definitions to learn:

PRE-BRIEF FOR A SIMULATION

Pre-brief is defined as an orientation session held prior to the start of a simulation-based learning experience in which instruction or preparatory information is given to the participants. It is the foundation of a successful simulation learning experience.

DEBRIEFING AFTER SIMULATION

Debriefing is the discussion that immediately follows a simulation-based experience. It is facilitated by an educator who observes the simulated experience. The discussion fit participants' objectives and outcomes of the simulation-based learning experience. Debriefing aims to promote reflective thinking. True learning occurs through a process of self-reflection. Effective debriefing is conducted in an environment that is conducive to learning and supports confidentiality, trust, open communication, self-analysis, and reflection.

University Libraries

The AUB library system consists of two main libraries: the University Libraries and Saab Memorial Medical Library.
The University Libraries include the Jafet Memorial Library (the Central Library) and two branch libraries: the Engineering and Architecture Library, and the Science and Agriculture Library with its annex AREC (Farm) Library.

The University Libraries are currently open 90 hours per week. The schedules of the libraries differ. Refer to the AUB website, click on libraries, in order to know the opening hours. Librarians also send regular emails regarding changes in their operating hours in the various semesters and during holidays. All libraries have photocopying machines that are available for student use. A card containing 100 photocopying units may be bought for 5, 000 LL in vending machines located in each library. Photocopying is also offered at the University Book Store for a small fee.

The Saab Medical Library (SML) is probably the one you will be using the most. The SML collection consists of 1,200 printed periodical subscriptions; over 82,320 back file periodical volumes, nearly 42,000 books, and nearly 2,300 audio-visual items, including computer

software. SML has a large number of the most important bibliographic medical and allied health databases, and more than 2,500 electronic journals. SML is accessible through the internet at http://www.aub.edu.lb/libraries/medical. The library has a special collection called the Lebanese Corner, http://192.168.100.187/, which includes publications about Lebanon or by Lebanese authors in the fields of medicine and other health-related topics. Databases are currently accessible via the AUB website.

Computing and Networking Services

Computing and Networking Services (CNS) provides access to different services that require user authentication. Before using the service, you must activate your **AUBnet account**: The AUB net account provides e-mail, intranet, and Internet access, in addition to other services such as roaming storage space, network printing, and personal web site space. You must activate your AUB net account before you can activate other accounts.

The **AUBsis account** provides access to the AUB Student Information System, a web-based application designed to provide the following on-line services to students and faculty: On-line Registration, Drop and Add, Class Schedules, Grades, Student Transcripts, Address Information, and Billing Statements.

Student computer labs are located throughout the University, including the libraries, faculty of medicine and faculty of health sciences buildings, among others.

An Internet fee of 300, 000 LL is charged every year and will automatically be added to the statement of fees. The quota of Internet data per month per student is 100MB. This is a combined quota of web and e-mail data. Through the AUB Net Resources web site you can find out your Internet data usage for the month. No limit exists on the time spent browsing and sending information on the web. The limit is only on the volume of data that is sent/received in the process.

Access to computer hardware, software, intranet, and the Internet services is provided to students for enhancing their learning. Access to the use of AUB computer facilities is through authorized computer accounts. Students must abide by the AUBnet Code of Conduct for Users of Computing System and Internet Services.

A computer account consists of a unique log-in ID and a password. Your log-in ID tells the computer system who you are. You must always keep your password secret. To activate your AUB computing accounts go to http://www.aub.edu.lb, select ”Get your AUB Computing Account,” and follow the instructions.

Student E-mail Address

To ensure that students receive timely communication and important announcements, the student’s current email address must always be on file in the School of Nursing. Every student is provided with an e-mail address. It is strongly recommended that all students use their AUB e-mail address as their primary one for the duration of the time they are studying here, to avoid missing announcements or other important communication from faculty and staff. We suggest that you get an email account during orientation week and check your email once per day.

The Writing Center

For students who need assistance in writing papers or projects, the AUB writing center located in West Hall Room 307 provides assistance. Tutors from the Department of English are available Monday through Friday 9 am – 3 pm and consulting services are free. The extension to call for taking appointments is 3157.

The Counseling Center

Adjusting to university life may be difficult for some students. For students who experience personal difficulties that lead to anxiety, depression or other psychological problems, the counseling center can provide assistance. The counseling team can assist with study related issues such as exam anxiety and time management, Counseling is free and confidential. The center is located in West Hall Room 206. The extension to call is 3196 or 3178.

Bookstore

The University Bookstore is located at the back of Bliss Hall across from Penrose Hall. It stocks most of the required textbooks for specific courses, dictionaries, and other reference works, and a limited number of general publications. Assorted AUB items and gifts such as clocks, mugs, T-shirts, and binders are also available.

Mail Service

The University Post Office, located in the basement of Ada Dodge Hall, handles local campus mail and mail for the Lebanese postal services. To secure a campus mailbox a student must show a receipt of fee payment at the AUB Post Office. Urgent mail may be sent by Aramex through the AUB Post Office. A special rate is offered to the AUB community. Also DHL offers special rates at the AUB Bookstore.

Food Service

The University operates a modern, cafeteria-style food service on campus in Ada Dodge Hall. In addition to the main cafeteria the University also maintains the Mary Dodge Hall Cafeteria, the Engineering Cafeteria, and the Agriculture Kiosk. These facilities provide a variety of hot and cold refreshments for students and their guests. Vending machines are available in a number of university buildings.

Students Housing

AUB is a residential university. For more information, check the AUB Catalogue, or check the Student affairs Office website at: http://staff.aub.edu.lb/~websao/house/.

Student Transportation

AUB allows very limited automobile access to campus: only students suffering from illness or disabilities may bring cars on campus. Authorization from the Infirmary must be received before a permit can be issued. Students should contact Business Services at extension 3510 for a special permit.

Students with Disabilities

Students with disabilities applying to AUB are strongly encouraged to make their disability known to the Admission Office. This information will not affect the decision on admission; rather, it will give the University the opportunity to offer specific assistance and support through programs and services provided by different departments on campus. Students need to consult with their advisers for assistance.

UNIVERSITY HEALTH SERVICES

Medical Record

An entrance medical record form will be sent to all admitted students who have made the commitment to enroll at AUB. The form should be completed by the student's family physician and mailed before the period of registration. Alternatively the completed form may be delivered by hand to the Office of Admissions.

All new students must have a tuberculin test at the time of the preliminary medical check, held during registration, and must report 48 hours later for the check on the test. Upon clearing the medical test, the student will be issued a clearance slip to proceed with registration. Students will not be registered unless they obtain this clearance slip. Medical checks may be completed in advance of registration provided that the student reports to the University Health Services on campus and brings along a letter of acceptance and the entrance medical record.

Returning students are not required to complete any medical forms. Important changes in the student's medical condition and/or updating immunizations should be reported to a University Physician by appointment at the Health Services Center. Information will be kept confidential.

All nursing students are required to go check on their Hepatitis B status, prior to commencing clinical..

The University Health Services (UHS) provide medical care to members of the university community in Sawaf Building at the following office hours:

Office hours: Monday through Friday

- **Offices** 8:00 a.m. - 5:00 p.m.
- **Clinics** 8:00 a.m. - 7:00 p.m.

Office hours: Saturday

- **Clinics** 10:00 a.m. - 2:00 p.m.

The Sawaf building is located near the AUB Medical Center. Appointments can be made at the reception desk. A physician is also available to receive patients on a walk-in basis. Walk-in patients must have problems of an urgent nature; otherwise, they will be given appointments for a later time. In case of emergency, the patient should report directly to the Emergency Unit at the AUB Medical Center or to the nearest Emergency Service.

Health Insurance Plan (HIP)

Students may elect to enroll in the University's Health Insurance Plan (HIP), provided they register for at least six credit hours. Students enrolled in the spring semester are covered until September 30, provided they do not leave the University or drop all of their courses. A married student will have the option of including his/her spouse and children for an additional fee. A student may be exempt from enrolling in HIP if he/she presents proof of coverage by another health insurance plan. HIP covers only those expenses incurred at the AUB Medical Center. Medical bills from other institutions are not covered.

National Social Security Fund (NSSF) Medical Branch

Membership in the NSSF is mandatory by law for all Lebanese students, excluding freshman and special students, and students who are older than 30 years. Non-Lebanese students may not join NSSF. To facilitate enrollment in the NSSF Medical Branch, students are required to bring the following items when registering:

- A social security application form filled in correctly. Copies of this form will be available for distribution at the time of registration to students.
- A photocopy of the Lebanese Identity Card.
- Their NSSF number if already registered.
- The NSSF number of either parent if insured with the NSSF through father or mother.

STUDENT EXTRACURRICULAR ACTIVITIES

Clubs and Societies

Opportunities for students to participate in extra-curricular activities, generally organized under the auspices of student-governed societies or clubs, are numerous at AUB. Membership is open to all registered students upon completion of a membership application and payment of a nominal fee. Almost all student clubs provide an outlet for artistic expression: Art, Music, Photography, and Poetry Clubs. For further information or to obtain a list of active clubs and societies, go to the Office of Student Activities in West Hall, extension 3182.

Nursing Student Society

The Nursing Student Society (NSS) brings together nursing students from all levels to engage in various professional and social activities, under the guidance of an assigned faculty advisor. Objectives of the NSS are to:

- Serve as an organization through which matters related to the welfare of students and the school is transacted.
- Provide a channel for coordination of activities between the students and faculty members, and with other student organizations.
- Organize activities that promote a spirit of loyalty and fellowship among the student body.
- Provide means for active participation in activities that foster the personal, professional and civic development of students.

The NSS has three standing committees:

1. The Educational Committee organizes educational programs of interest to the community.
2. The Social Committee is responsible for social and recreational activities.
3. The Publicity and Finance Committee is responsible for publicity and financial matters.

Athletics and Recreation

The University offers a wide range of sports, athletic and recreational programs through its Athletics Department. Facilities include AUB's Green Field, which hosts international, national, and varsity sports tournaments. The Green Field includes the University's soccer field, lighted outdoor basketball courts, lighted outdoor volleyball courts, and a lighted 450-meter track.

IMPORTANT TELEPHONE NUMBERS

Finally, here are some helpful telephone numbers for you to have:

Clubs and Student Activities (West Hall)	3182
Emergency Room	6604
Financial Aid	3160
Housing	3175
Infirmary, University Health Services	3000
Registrar	2570
Student Affairs	3170
School of Nursing	5950, 5951

Appendix A

Clinical Practicum Orientation Tips

These are simple "tricks" for a good clinical experience

- **Punctuality:** Be 15 minutes early to the rotation. Have a good breakfast before coming.
- **Preparation:** Make sure you have all the equipment you need and that you reviewed your notes very well ahead of time.
- **Dress Code:** Wear clean shoes and clothes, shave, everyone will respect you when you dress well and act in a professional way.
- **Caring:** Make a special time to go to the patient's room and discuss their condition.
- **Self Learner:** Be interested to learn more, ask whatever question that pops to your head, and just enjoy the learning experience.
- **Professionalism:** Maintain a positive relationship with your preceptor, your fellow students and health care team.
- **Safety:** Assure your own safety. Ensure you have completed your HBV. HAND HYGINE IS VERY IMPORTANT KEEP IT IN MIND.

WELCOME

Welcome to the Rafic Hariri School of Nursing (HSON). We are delighted that you have chosen to study nursing at AUB and look forward to meeting each one of you. This is an exciting time for nursing—both at AUB and throughout the world.

In the field of nursing generally, nurses are taking on new and greater responsibilities. Although taking care of patients is still our primary responsibility, we are also playing a role in setting health care policy at the national, regional, and international levels and researching important health care issues.

Here at AUB, we celebrated our 100th anniversary in 2005 and our 110th anniversary in 2015. We have introduced new programs and are constantly updating and revising our curriculum. Our graduates are in great demand and they are occupying leadership positions in different countries in the world. In 2007 the BSN and MSN programs were granted unconditional accreditation by the Commission on Collegiate Nursing Education (CCNE) in the USA for five years and in 2012 the programs were reaccredited for a period of 10 years. AUB School of Nursing is the first school to be accredited by CCNE outside the USA. In 2008 the HSON received a $10M gift to endow the school and the building and in 2009 the Rafic Hariri School of Nursing building was inaugurated. The building houses faculty offices, classrooms, an auditorium, a computer lab, skills and simulation lab, a research center, and student facilities.

In 2015, HSON won three major regional awards; HSON received the best institution award, Dr. Huda Huijer the distinguished researcher award, and an MSN graduate the best thesis award. The Chi Iota Honor Society Chapter, the first in the region, was formallychartered by Sigma Theta Tau International (STTI) in 2015 and 131 members were inducted into this prestigious honor society. We continue to be proud of these accomplishments and we look forward to working with you to celebrate these achievements. We will be happy to explore with you the different paths from which you can choose when you graduate with a BSN degree

We hope this handbook will be a useful guide for you especially during the first couple of weeks when everything is so unfamiliar. If, however, you are lost or need help, please come and find us. We are eager to do whatever we can to make this a positive and rewarding experience for you.

We also welcome any comments or suggestions you may have on how we might change and improve on this handbook in order to make it more helpful for future School of Nursing students.

Good luck!

Dr. Huda Abu-Saad Huijer, RN, PhD, FEANS, FAAN

AUBMC Pediatrics Educational Council : Mrs. May Khoury

PREFACE

This handbook has been prepared for undergraduate nursing students to provide detailed information about the Bachelor of Science in Nursing (BSN) program at the American University of Beirut (AUB). The handbook includes guidelines to facilitate the student's progress in the program from admission through graduation.

The faculty and administration of the Hariri School of Nursing hope that the educational experience at AUB will be a rewarding and challenging experience for each student. We are here to assist students to reach their professional and educational goals.

In addition to the policies found in this handbook that are specific to the undergraduate program at the School of Nursing, the student should obtain and keep a copy of the AUB Catalogue, which contains policies and procedures that apply to all undergraduate programs in the University. We urge you to consult the catalogue and this handbook often. If you have any questions or are unsure of a particular policy, please contact the BSN Coordinator who is available to assist you.

GENERAL INFORMATION ABOUT THE SCHOOL OF NURSING

Historical Background

The School of Nursing, founded in 1905, was the first nursing school in the Middle East. The five–year Bachelor of Science in Nursing program, established in 1936, was replaced in 1964 by a four–year program leading to the degree of Bachelor of Science in Nursing. Students entering the school as sophomores graduate in three calendar years. The RN-BSN program was reactivated and launched in 2003. The Masters of Science in Nursing (MSN) program was launched in 2003. The Bachelor of Science in Nursing program (BSN) and the MSN program are registered by the Department of Education of New York State, HEGIS codes 1203.00 and 1203.10, respectively. The BSN and MSN programs are accredited by CCNE, the Commission on Collegiate Nursing Education, in the USA. The AUB School of Nursing is the first School of Nursing outside the US territories to be accredited by CCNE.

Mission

The mission of the School of Nursing is to promote and maintain the highest educational standards of excellence, integrity, and professionalism in nursing, following the American model of nursing education and practice. The school aims to provide learning opportunities that will enable students to develop into competent nurses who respect cultural diversity while coordinating and delivering high–quality, compassionate nursing care in Lebanon and beyond, guided by ethical principles. The faculty believes education is an interactive process between faculty and students with both taking responsibility for active learning. The baccalaureate program, drawn primarily from the humanities, sciences, and caring disciplines, focuses on the use of nursing theory and research as a basis for practice. The master's program focuses on preparing nurses for advanced nursing practice roles, and is based on the use and generation of research–based knowledge to guide practice. Nursing students at AUB learn to think critically, develop professional attitudes and leadership skills, and appreciate the value of life–long learning and freedom of speech

Programs

Undergraduate Programs:

» Bachelor of Science in Nursing (BSN)
» Registered Nurse-Bachelor of Science in Nursing (RN-BSN)
» Bachelor of Science-Bachelor of Science in Nursing (BS-BSN)

Graduate Programs:

Master of Science in Nursing (MSN)
MSN students can specialize in one of four areas:

1- Adult Gerontology Clinical Nurse Specialist
2- Psychiatric Mental Health Clinical Nurse Specialist
3- Nursing Administration and Management
4- Community and Public Health Nursing

Undergraduate Program Outline

Admission

Students holding diplomas from a 12–year secondary school may gain admission to the School of Nursing as first year nursing students (see page 38 for required courses at the freshman level). Freshman students wishing to transfer to the School of Nursing from AUB or another institution may gain admission provided they complete the required freshman courses.

Bachelor of Science in Nursing (BSN)

The School of Nursing follows the admission policies and criteria of the University.

RN–BSN Program

The curriculum is designed to permit the graduates of a technical program in nursing to pursue the degree of Bachelor of Science in Nursing provided the university entrance requirements are met. The time limit for completion of the program should not exceed six calendar years. A selected number of nursing courses may be validated if applicable.

Preferred requirement for admission to the program is three years experience in addition to the English Entrance Exam. The candidate may be asked to interview with the school's director and/or program convener.

According to the decree no. 855 dated 01/07/2015, issued by the Ministry of Education and Higher Education, holders of the technical baccalaureate (BT) are only eligible for admission to the same major as that of BT. In this case, holders of BT applying to the BSN program should complete the following remedial/pre-requisite freshman level courses prior to the BSN II year:

- 3 credits in Mathematics (MATH 101 or 102)
- 3 credits in Chemistry (CHEM-101)
- 3 credits in Biology (BIOL-101)
- 3 credits in Physics (PHYS-101, 103 or 200)

BS/BA-BSN Accelerated Program

The School of Nursing accelerated program is designed for individuals who have a BS/BA in fields other than nursing. The streamlined curriculum permits students to earn a BSN in 24 months. Students who graduate from this program are entitled to sit for the National Colloquium Exam to become registered nurses. The admission to the BS/BA-BSN program requires the following:

BS/BA degree in a field other than nursing
A minimum GPA of 75 including prerequisite courses and general education requirements
Completion of the following prerequisite courses prior to admission: ENGL 204, PSYC 201, Biostatistics course, PSYC 210, SOAN 201, and four elective courses

THE BSN DEGREE REQUIREMENTS

A student has a maximum of six (6) years to complete an undergraduate degree at AUB, if he/she enrolls as a sophomore student. You must complete all requirements for the BSN degree in order to participate in graduation activities.

Graduation Requirements

All recommendations for graduation are made by vote of the faculty, upon the recommendation of the academic committee.
To be eligible for graduation with the degree of Bachelor of Science in Nursing, the following requirements must be met:
completion of the prescribed program of study with a minimum of 103 credits after the freshman class or equivalent, 100 credits for those entering at English 204, 91 credits for those entering as registered nurses and
an overall average of 70, excluding freshman courses.
The maximum time allowed for the completion of the degree program should be within the following specified periods:

BSN II	six calendar years
BSN III	four calendar years
BSN IV	two calendar years

Students must petition the academic committee for an extension of time if needed.
All undergraduate transfer students from AUB or from other recognized institutions of higher learning to the School of Nursing need to complete the required prerequisites and all required nursing courses. A minimum residency period of one year or 30 credits for within AUB transfers and 45 credits for transfers from outside must be completed at AUB.
Course credits pertinent to the nursing curriculum may be transferred according to criteria set by the admission and academic committees.

BSN PROGRAM OUTCOMES

I. Integrate knowledge from the arts, humanities, fundamental and basic medical sciences, and nursing theory in professional practice.
II. Demonstrate competency in clinical skills and critical thinking.

III. Utilize current research knowledge related to health promotion and maintenance, illness prevention and restoration of health of individuals, families and groups with diverse cultural backgrounds.
IV. Demonstrate leadership skills in the care management of clients in different health settings based on current health care policy.
V. Collaborate with other health providers to promote the well being of individuals.
VI. Demonstrate responsibility, accountability, and continued professional development.
VII. Participate in professional and community organizations for the promotion of the nursing profession in Lebanon and the region.
VIII. Demonstrate effective use of personal, interpersonal and group communication skills in practice.
IX. Espouse principles of professional ethics and personal integrity in nursing practice.

In order to achieve the BSN program outcomes upon graduation, the student is expected to achieve at the end of each class certain learning outcomes, called level outcomes).

BSN Student Outcomes		
BSN II (Sophomore Year)	**BSN III (Junior Year)**	**BSN IV (Senior Year)**
Upon completion of the sophomore year the student shall be able to: A. Demonstrate beginning skills in effective communication B. Identify healthcare needs of clients based on assessment of physical, psychological, and social parameters C. Identify developmental milestones in relation to the health-illness continuum D. Provide basic nursing care based on the nursing process E. Demonstrate skills in searching the nursing literature F. Identify ethical principles that govern the nursing profession	Upon completion of the junior year the student shall be able to: A. Utilize the nursing process in planning the care of the clients along the health-illness continuum B. Provide comprehensive/holistic care to individual clients across the life span C. Integrate theoretical knowledge from the social and basic sciences with that of nursing as a basis for practice D. Appreciate the use of research in nursing practice (assessment and intervention) E. Demonstrate therapeutic communication skills with clients F. Demonstrate ability to work in groups G. Identify ethical principles that govern nursing practice H. Demonstrate responsibility and accountability for personal and professional growth	Upon completion of the senior year the student shall be able to: A. Utilize appropriate theories and research findings from nursing and related fields in nursing practice B. Evaluate systematically the outcomes of care in a variety of settings based on the nursing process C. Apply knowledge of group dynamics while working with groups of clients, healthcare professionals and co-workers D. Demonstrate leadership skills in planning, managing, and evaluating care of clients E. Demonstrate responsibility and accountability to individuals, families, society at large, and personal professional growth and development F. Determine ethical, social, and political issues affecting the healthcare system in Lebanon

CURRICULUM AND COURSE REQUIREMENTS

The BSN curriculum totals 103 credits for students entering as sophomores and includes two summers of study. Students take courses in English, the Arts and Sciences, basic medical sciences, and nursing. Nursing courses include classroom teaching and clinical training in health-care settings. 12 credits electives in humanities that meet the general education requirement are required for graduation. Students will be asked to take half of the elective humanities from LIST I, and the other half from either lists I or II (check list of courses under GE section). The table below shows the curriculum plan, starting with the Freshman year

AMERICAN UNIVERSITY OF BEIRUT - FACULTY OF MEDICINE - SCHOOL OF NURSING

  - ⁂ Electives as necessary to add up to 30 credits in total
  - ⁂ ◈ For Arabic speaking students; for others credits have to be replaced by an elective

GE Refer to List of courses under General Education section

*Passing grade for NURS 203 is **60**

**Offered either fall or spring semester in the senior year

***Offered either fall or spring semester in the senior year

Students will be asked to take half of the humanities and social sciences requirements from LIST I, and the other half from either lists I or II (check list of courses under GE section)

May 2016

Course Descriptions

Nursing courses are numbered according to level and normally follow a sequence. Below is a list of all undergraduate nursing courses. To the right of the course title is a set of 3 numbers that indicate the following:

- The first number following the title of a course indicates the number of class hours per week.
- The second number indicates the number of clinical hours per week. (Please note that not all courses include clinical hours.)
- The third number indicates the number of credit hours applied toward graduation.

NURS 200 Introduction to Nursing 2.0; 2 cr.
Introduces concepts basic to the nursing profession. The nature of nursing as a profession, past, present, and future, is studied with a focus on the role of nurses in meeting the health needs of humanity throughout the health–illness continuum. *Fall and spring.*

NURS 201 Introduction to Nursing Practice 1.3; 2 cr.
This course introduces students to concepts and interventions basic to nursing practice. The course uses the nursing process as the organizing framework, and the concepts of health, nursing, client, and environment are integrated throughout. Performance of basic client care skills are emphasized, including the scientific rationale for both health promoting and health restoring nursing interventions. *Prerequisite: NURS 200; corequisite: HUMR 248. Spring.*

NURS 202 Health Assessment 1.3; 2 cr.
The course focuses on assessment of health across the life span and provides the student with the knowledge and skills needed to assess the health status of individuals from infancy to old age. Emphasis is placed on assessment of the physical, psychosocial, and cultural dimensions of the individual. The course includes lectures and practical experiences in the assessment of individuals to identify normal and abnormal findings. *Corequisites: NURS 201 and HUMR 248. Spring.*

NURS 203 Biotatistics for Nurses 3.0; 3 cr.
This course is designed to introduce the BSN students to the concepts and applications of statistics in the nursing field. The course starts with a general overview of probability, types of data, and ways to summarize and present them. The course then introduces the concept of hypothesis testing and the methods to carry them. Applications on the computer using the SPSS software will be discussed in class. *Summer.*

NURS 205 Foundation of Professional Nursing 2.0; 2 cr.
In this course students will explore recent issues affecting the nursing profession in terms of role expansion of the nurse. The nursing process is covered as an organizing framework for nursing practice.

NURS 210 Pathophysiology 2.0; 2 cr.
This course focuses on the biologic alterations that affect body dynamic equilibrium or homeostasis. The content of this course is organized into three areas of focus based on the health–illness continuum: 1) control of normal body function 2) pathophysiology or alteration in body function 3) system or organ failure. *Prerequisites: BIOC 246, HUMR 248, and MBIM 237. Summer.*

NURS 300 Nursing Care of Adults I, Theory and Practicum 2.8; 5 cr.
This course covers scientific principles in the care of adults presenting with medical-surgical problems. It builds on the framework of man, environment, health and nursing. The practicum provides students with opportunities to apply knowledge in clinical practice. *Prerequisites: NURS 202 and NURS 210; corequisite: PHRM 240. Fall.*

NURS 302 Nursing Care of Adults II, Theory and Practicum 2.8; 5 cr.
This course is a continuation of NURS 300. Emphasis is placed on the following dysfunctions: metabolic and endocrine, neurologic, eye ear nose and throat, renal and urinary, integumentary, hepatic and biliary, rheumatic, as well as the infectious process. *Prerequisites: PHRM 240 and NURS 300. Spring.*

NURS 304 Nursing Care of the Expectant Family, Theory and Practicum 2.8; 5 cr.
This course focuses on reproductive health, from conception to the neonatal period. The content stresses the nurse's role in reproductive health and risk management. The practicum provides clinical application of knowledge, focusing on women in the childbearing cycle, the newborn, and families as clients in the hospital and outpatient settings. *Prerequisites: NURS 202 and NURS 210; corequisite: PHRM 240. Fall.*

NURS 306 Nursing Care of Children, Theory and Practicum 2.8; 5 cr.
This course focuses on the care of children, from infancy through adolescence. Topics include ambulatory and in-patient care, as well as primary, secondary and tertiary care. The practicum provides the students with opportunities to assess health needs of children based on knowledge of growth and development, and to implement nursing care, based on the nursing process. The roles of nurse as teacher, patient advocate and nurturer are emphasized. *Prerequisites: PHRM 240, NURS 304, and PSYC 210. Spring.*

NURS 307 Practicum I 0.6; 0 cr.
This course is designed to provide students with opportunities to practice advanced nursing skills learned in previous nursing courses, and builds on experiences gained in the sophomore and junior years. *Prerequisites: NURS 302, NURS 304, and NURS 306. Summer.*

NURS 308V Maternal Child Nursing, Theory and Practicum 3.8; 6 cr.
This course focuses on the childbearing family from conception to the newborn period as well as primary and tertiary care of the ill child from infancy to adolescence. The clinical component emphasizes the application of knowledge acquired in class in the care of the childbearing family and children with illnesses from infancy to adolescence.

NURS 311V Nursing Care of Adults, Theory and Practicum 3.8; 6 cr.
Facilitates the development of advanced knowledge and application of scientific principles in the care of clients representing medical–surgical problems of the adult population. This course builds on the framework of person, environment, health status, and nursing. The clinical component provides an opportunity for advanced clinical application of concepts discussed in class in the care of patients and their families.

NURS 312 Mental Health and Psychiatric Nursing, Theory and Practicum 2.8; 5 cr.
The holistic philosophy of clients as bio–psycho–social entities is stressed in both mental health and mental illness. General theories of psychiatry and mental health therapies are presented. The course provides clinical experience in psychiatric–mental health settings. Emphasis is placed on the quality of coping abilities of clients in varying degrees of stress and crisis. Opportunities are

provided for students to work collaboratively with multi–disciplinary health teams to assess, plan, and implement relevant nursing interventions in both mental health and illness. *Prerequisites: SOAN 201 and PSYC 201. Fall and spring.*

NURS 313 Leadership and Management in Nursing, Theory and Practicum 3.6; 5 cr.

This course discusses concepts of leadership, management, creativity, analysis, power, change, and evaluation. Students investigate, analyze, and conceptualize the different modalities of leadership, utilizing nursing and management theories. The practicum allows the student to explore his/her role as a potential leader. The learner observes and assists in the practice of different modalities of leadership and managerial skills in a variety of health care settings.

NURS 314 Community Health Nursing, Theory and Practicum 2.8; 5 cr.

The course provides knowledge in the broad area of the field of nursing, public health, and primary health care. The levels of prime concern are the small group, including the family and its individual members, and the large group, including the community. The focus of the clinical component is on the promotion and maintenance of high levels of health and well-being, and prevention of illness and disability. *Fall and spring.*

NURS 400 Critical Care Nursing, Theory and Practicum 2.6; 4 cr.

This course focuses on the care of clients with critical care problems. Emphasis is placed on cardiovascular and respiratory problems, neurologic disturbances, shock, sepsis, metabolic and endocrine imbalances, altered nutrition, renal failure, emergency and disaster nursing. The practicum provides opportunities to apply knowledge in clinical settings. *Prerequisites: NURS 302 and NURS 307. Fall.*

NURS 402 Mental Health and Psychiatric Nursing, Theory and Practicum 2.8; 5 cr.

This course provides the mental health setting for self-awareness and therapeutic use of self in effective communication. The holistic philosophy of clients as bio-psycho-social entities is stressed in both mental health and mental illness. General theories of psychiatry and mental health therapies are presented. The practicum provides clinical experience in psychiatric-mental health settings. Emphasis is placed on the quality of coping abilities of clients in varying degrees of stress and crisis, with experiences in working with multi-disciplinary health teams to assess, plan, and implement relevant nursing interventions. *Prerequisites: Senior standing, SOAN 201, and PSYC 201. Fall and spring.*

NURS 404 Nursing Informatics 2.0; 2 cr.

This course focuses on the history of health care informatics, basic informatics concepts, and health information management applications. The student progresses from developing knowledge of basic concepts and methods of health care informatics; to learning about specific information management applications in health care administration, practice, education, and research; and finally to a hands-on experience with a specific application of his/her own choosing. *Prerequisite: consent of instructor. Fall.*

NURS 405V Critical Care Nursing, Theory and Practicum 2.6; 4 cr.

This course addresses the management of critically ill adults. Emphasis is placed on diagnostic reasoning, interventions, and outcome assessment in patients presenting with complex cardiovascular, respiratory, renal and metabolic problems, as well as trauma. The clinical component provides experiences where students apply concepts learned in class in critical care areas in the hospital. *Prerequisite: NURS 311V.*

NURS 406 Nursing Research 3.0; 3 cr.
Focuses on the process involved in the scientific approach and its application to nursing. Special emphasis is on the basic research steps, the research design, assessment measures, and data analysis with a focus on research utilization. *Prerequisite: NURS 203. Fall.*

NURS 408 Community Health Nursing, Theory and Practicum 2.8; 5 cr.
This course provides knowledge in the broad field of nursing, public health, and primary health care. The levels of primary concern are the small group, including the family and its individual members, and the large group, including the community. The practicum provides field practice through collaboration with other health professionals in primary care settings, with focus on health promotion, maintenance, and the prevention of illness and disability. *Prerequisite: Senior standing. Fall and spring.*

NURS 410 Leadership and Management in Nursing, Theory and Practicum 3.6; 5 cr.
This course discusses how professional nursing incorporates the concepts of leadership, management, creativity, analysis, power, change, and evaluation. In this course students investigate, analyze, and conceptualize the different modalities of leadership, utilizing nursing and management theories. The practicum allows students to explore their role as potential leaders. Students observe and assist in the practice of different modalities of leadership and managerial skills in a variety of health care settings. *Prerequisite: Senior standing. Spring.*

NURS 411 Intensive Practicum in Area of interest 0.9; 0 cr.
This course focuses on preparing students towards their transition to professional nursing practice. Opportunities are provided for students to synthesize knowledge and refine skills acquired in the planning, provision and evaluation of nursing care, communication, and interdisciplinary practice in a clinical area of their interest. Consent of instructor is required for the site of clinical practice. *Prerequisite: Senior standing. Spring.*

IPEC 300 Interprofessional Education and Collaboration 1.0; 1 cr.
This is a required course for third-year medical, senior undergraduate nursing and Masters of Public Health students, and it aims at demonstrating how population health is best promoted and safe, patient-centered care is best provided through a collaborative health teams approach. The course will be based on cases designed by faculty members belonging to the three aforementioned disciplines, on topics on which inter-professional partnership is necessary. Discussion groups combining students from all three professions will be moderated by faculty members from the three professions. Students will learn the roles and responsibilities of other health professions and how to function in interprofessional teams. *Senior Standing*

ACADEMIC RULES AND REGULATIONS

Categories of Students

Full-Time Students

To be considered a full-time student, a student must carry a minimum load of 12 credits per semester. (Students can register for up to 17 credits per semester.) During the summer session, full-time students are required to take 9 credits. Registering for more than 17 credits (or 9 credits during the summer) requires the approval of the School of Nursing Director.

Part -Time students

These include the following categories:

- AUB staff members who are working toward a degree.
- Those who need to complete less than 12 credits for an undergraduate degree.
- Those who are granted permission by the appropriate faculty committee for health or family reasons to take less than a full course load.

Supervision

Each student will be assigned an academic adviser in his/her first semester who will guide the student on academic matters throughout his years of study. The adviser must be consulted and approve the student's schedule each semester. Students can find out the name of their advisers on the Student Information System (SIS).

Attendance

CLASSES AND LABORATORIES

Students are expected to attend all classes, laboratories, and any other required activities. Absence by students, whether excused or not, from any class or laboratory session does not excuse them from their responsibility for the work done or from any announcements made during their absence.

Students who are absent from more than one fifth of the number of lectures of any course during a semester lose all credit for the course.

Students may not be excused from laboratory and field requirements. All missed clinical and field requirements must be made up. In case of repeated absences from clinical courses, over one fifth of the total hours, the student may be asked to drop the course.

All Nursing courses that contain clinical parts should have an Objective Structured Clinical Examination (OSCE) as part of course assessment

- A cumulative average of 70 and above should be scored on the exams, regardless of the total course grade
- Passing a course requires:
    - Scoring above 70 as total average on the theory part,
    - Passing the OSCE and
    - Passing the clinical part.

Examinations and Quizzes

- Students may not absent themselves from announced final examinations and quizzes unless they present an excuse considered valid by the coordinator of the course. The course coordinator may then require the student to take a make-up examination.
- Students taking non-nursing courses from the other faculties of the University are required to follow the attendance regulations of that faculty.

Computer Literacy

Undergraduate students are expected to have a basic level of computer literacy. Ability to use Microsoft Word and Power Point programs is a minimum requirement, since most courses require term papers and oral presentations. If you feel that you are weak in this area, please take advantage of the various free computer programs that the Academic Computing Center offers throughout the year. You can reach the computing center through the AUB website or by calling 2599.

Grading System

- The School of Nursing uses the following grading system:

GRADING SYSTEM

CAV*	GPA		CAV	GPA		CAV	GPA			
									I	Incomplete
<60	0		70	2.2		81	3.29		P	Pass
60	1		71	2.31		82	3.38		PR	In Progress
61	1.13		72	2.42		83	3.46		W	Withdraw
62	1.26		73	2.52		84	3.54		F	Fail
63	1.38		74	2.62		85	3.63			
64	1.5		75	2.73		86	3.7			
65	1.63		76	2.82		87	3.78			
66	1.74		77	2.92		88	3.86			
67	1.86		78	3.02		89	3.93			
68	1.98		79	3.11		>=90	4			
69	2.09		80	3.2						

* CAV Cumulative Average

- The passing grade in all nursing courses is 70.

INCOMPLETE GRADES

- Incomplete course work will be reported as an “I” followed by a numerical grade that reflects the evaluation of the student available at the end of the semester.

- To secure permission to complete the work for a course, a student must submit a valid excuse to the instructor of the course and the Academic Committee within two weeks from the date of the final exam for the course.
- Students permitted to complete work for a course must do so within **four weeks** from the start of the next regular semester. When the incomplete work has been completed and evaluated by the instructor, the director of the school (upon the recommendation of the Academic Committee) will consider changing the course grade. If this is done, a new grade will be reported to the Office of the Registrar.
- If no valid excuse is presented and the work is not completed within the time limits specified above, the "I" will be dropped, and the numeric grade available becomes the final grade in the course.

REGISTRATION

Academic Year

The academic year at AUB is divided into two semesters, fall, and spring, followed by a summer session. Each semester has a reading period and a final exam period, followed by a break before the next semester.

Course Registration

New students should register on-line via the Internet in August prior to the start of the academic year. The registration procedure is explained during the orientation week that is usually held during August.

Drop and Add

After the start of classes, at a date indicated in the university calendar, students may make changes in their schedules through a process known as "Drop and Add". After obtaining the approval of their advisers, students may change their courses. Depending on the changes that are made, students may need to settle their accounts at the Office of the Comptroller to adjust their tuition fees according to the final number of credits registered.

Payment of Fees

Each AUB student must pay all his/her tuition fees and other charges levied.

1. All students must finalize registration, including payment of tuition fees according to the academic calendar for the first and second semesters. Under special circumstances, late registration will be permitted during a period of no more than five working days after the announced deadline, but subject to a late registration fee (***150, 000 L.L.).***
2. Students who demonstrate financial need may make formal application for deferred payment arrangements for tuition fees to the Office of the Comptroller according to the academic calendar for the first and second semesters. These students are still required to complete all registration formalities within the set deadlines. Deferred payments are not permitted for the summer session in any faculty.
3. A student who applies for deferred payment must pay at least 50% of the net amount of tuition due. All other charges must be paid in full with no deferrals by the set deadlines. A student must pay a deferred payment application fee of $33, whether approved or not.

4. Every student granted deferred payment must sign a statement indicating agreement that failure to complete payment by the set deadline will result in receiving no credit for the semester in which the student failed to pay.

Students are expected to meet all financial obligations by the set deadlines. The University reserves the right to place a hold on the student's record that will prevent registration for future semesters and the release of transcripts and diplomas, as well as access to other University services, if he/she fails to promptly meet his/her financial obligations to the University.
Please consult the Office of the Registrar (ext: 2570 /2571) or the Registrar's website: http://staff.aub.edu.lb/~webregist/ for up-to-date schedules for registration and payment of fees.

ACADEMIC PROGRESS

Promotion

Students shall be promoted at the end of the summer session after completion of **30 or more credits** beyond the requirements from the previous level. However, students who register in September and who lack 6 or fewer credits for completion of a class will be registered in the next higher class at the discretion of the academic committee. **In order to be promoted, students must attain a minimum average of 68 at the end of the second regular semester (sophomore year) and 70 in the following years.**

Placement on the Dean's Honor List

To be placed on the Dean's Honor List at the end of a semester a student must:

- Be a fulltime student (registered at least twelve credits of new courses other than those repeated
- Not be on probation.
- Have passed all courses taken during the semester, have an overall average of 85, or be ranked in the top 10% of the class and have an average of 80.
- Not have been subjected to any disciplinary action within the University.

Placement on Probation

In concordance with AUB policies, a student will be placed on probation for any of the following reasons:
if the student fails 6 or more credits at the end of a semester, and/or
if the student does not attain the minimum required semester average of 65 for the first regular semester of BSN II or 68 for the second regular semester of BSN II, or70 for the following years.

Students in their freshman and sophomore years will be placed on probation at the end of their first semester only if they fail in one half or more of the credit hours carried.
These regulations do not apply to part-time students until they have completed at least 12 credits. For part-time students, a semester is defined as consecutive courses totaling 12 credits.

Removal from Probation

Action to remove probation at the end of a semester will be taken provided the full-time student:

- has passed all courses taken during the semester;
- achieved the minimum required average for that semester; and
- achieved the minimum yearly average required.

A student is expected to be removed from probation within two regular semesters.

Repeating Courses

- A student may repeat a course with the consent of the adviser and course coordinator.
- A student must repeat all required courses that he/she fails.
- When a course is repeated, the highest grade obtained will be considered in the calculation of the cumulative average.
- In exceptional cases, a student may be allowed to take a make-up exam for a course failed, within four weeks from the start of the next regular semester. S/he must have the approval of the course coordinator and the Academic Committee in order to do this.
- Repeating a course may delay the student's graduation from the program

Repeating the Year

The Academic Committee may require a student to repeat the year if he/she

- Fails in one-third or more of the credit load attempted during that year; or
- Fails to remove probation within two semesters; or
- Fails to obtain the minimum yearly average.

A student repeating the year must register for a full load and repeat all courses in which he/she has scored below the minimum required for that year.

Dismissal from the School of Nursing

A student may be **dropped from the BSN program** by vote of the faculty upon the recommendation of the Academic Committee for any of the following reasons

- fails to remove probation within two regular semesters;
- fails in one-third or more of the load attempted during that year and fails to attain the minimum yearly average;
- fails to satisfy the requirements of a repeated year; or
- is not making satisfactory academic progress, has not shown sufficient professional promise, or has behaved in a manner below the norms expected by the school.

Once the student is dropped from the BSN program, he/she will be placed as Majorless for 2 consecutive regular semesters to secure a transfer to another faculty. Failure to do so will lead to the students' **Dismissal from The Hariri School of Nursing**

Application for Readmission

When, in accordance with university regulations, a student is dropped, the implication is that the student is not qualified to continue his/her education at the School of Nursing. Consideration for readmission is given for one of the following reasons:

- If the student was not able to do his/her work efficiently because of health reasons. In such cases, the school will require a medical report from the university physician.

- If the student's adviser or a faculty member or administrative official of the University knows of certain family problems that may have influenced the academic achievement of the student.
- If, after spending one or two years at another institution, the student is able to present a satisfactory record and recommendation.

Ordinarily, supporting documents for the first two reasons must be presented within 30 days of when the student is dropped from the school, but in exceptional cases this presentation may be made at the beginning of the following regular semester.

If a student is on probation and leaves the University after the tenth week of the semester, the Academic Committee will decide whether he/she may be allowed to return to the University.

AWARDS, FINANCIAL AID AND SCHOLARSHIP

AWARDS

A number of awards are given to students who demonstrate exceptional academic achievement. The awards and related criteria are:

Penrose Award

This is a non-cash award that is made to an outstanding graduate of the school on the basis of scholarship, character, leadership, and contribution to university life.

Women's Auxiliary Awards

Cash and certificate awards are granted to senior students who meet the following criteria: academic achievement, professional integrity, and seriousness of purpose, contribution to professional and university life, and willingness to work at the AUB Medical Center after graduation. The awards are:

- Emily Asfour
- Mary Crawford (Florence Nightingale)
- Agnes Shammaa
- Laila Iliya
- Helen Zarwi
- Nada Alameddine Kanso
- Najla Morston
- Jacqueline Rubeiz
- Hanneh Shahine
- Ann Smith

Lions Award

This is a non-cash award, granted to a student who has been commendable for academic achievement and professional integrity.

Women's Auxiliary Contracted Scholarship: Annette Hajjar Scholarship.

The recipient of this award is required to work at the AUB Medical Center for a period of two years.

Financial Aid and Scholarships

AUB offers financial aid to qualified students in the form of need-based financial aid grants, merit scholarships, and student work-study. Nursing students can also apply for a bank loan through the Office of Financial Aid.
Students applying for financial aid for the first time may obtain applications from the Office of Financial Aid in West Hall. Applications must be submitted before the deadline, which can be found at the website: http://staff.aub.edu.lb/~webfaid/ Financial need is assessed for each student annually on the basis of factors such as family income, number of siblings enrolled in school/university, assets such as home(s), and other property, and major changes in financial status. Financial need is a necessary—but not a sufficient condition—for an award. Students with high need and excellent scholastic achievement records are more likely to receive awards than students with low need and average scholastic records.

The Hariri School of Nursing is offering 60% (Financial Aid+HSON scholarship) to full time students who show commitment to nursing and who have a good academic standing. In addition, these students might be eligible to request a 30% bank loan that can be paid back after graduation over a period of 10 years. The students can also apply for the work study program to cover the remaining 10% of the tuition fees. Each student should submit a financial aid application at the office of financial aid to be eligible for this scholarship.

Other scholarships are available for Nursing students and awarded based on financial need and academic performance.

GENERAL POLICIES AND INFORMATION

Non-Discrimination Policy

AUB encourages a diverse student body and workforce, and is committed to the principle of equal opportunity in education and employment. In the administration of its educational, admissions, and employment policies, and other university programs and activities, AUB does not discriminate on the basis of race, color, religion, age, national or ethnic identity, gender or gender identity, marital status, disability, genetic predisposition or carrier status, alienage or citizenship status, political affiliation, or any legally protected characteristic, except as required by Lebanese law.addition, in compliance with Title IX of the US Education Amendments of 1972, which prohibits sex discrimination in education and interprets sex discrimination as including sexual harassment and sexual violence, the University maintains a Title IX coordinator in the Office of the Provost and may appoint deputy Title IX coordinators as needed. Inquiries and complaints regarding sex discrimination, sexual harassment, and sexual violence may be directed to the Title IX coordinator, College Hall, 5th Floor, Beirut, Lebanon, or by email at integrityofficer@aub.edu.lb. The Office of the Provost maintains a resource page on Non-Discrimination, Harassment, and Title IX at www.aub.edu.lb/titleix. AUB will provide reasonable accommodation consistent with the law to members of the AUB community with a disability. What constitutes a reasonable accommodation depends on the circumstances and, thus, will be addressed by AUB on a case-by-case basis.

Academic and Professional Integrity

The Rafic Hariri School of Nursing follows AUB policy regarding the academic conduct of students. **The faculty and staff at the Hariri School of Nursing take all issues related to academic and professional integrity extremely seriously.**
Students are expected to have high standards of integrity in both the clinical and academic settings. Integrity is a reflection of self-respect and is demonstrated by a student's behavior in class and in the clinical setting.
Academic integrity and honesty are central components of a student's education. Ethical conduct at the University will be carried into the student's professional career.
Academic dishonesty, including but not limited to cheating and plagiarism, is deplored and not tolerated. Any act of cheating may be ground for probation, suspension, and/or expulsion from the school. Any act for plagiarism may be grounds for a failing grade on the paper and in the course. In addition, other sanctions may be imposed by the school for acts of academic dishonesty.

In clinical settings, students are expected to protect patients' confidentiality, and to be honest in any documentation regarding the patient's condition and their own assessment and interventions. Students are expected to maintain high professional standards, including being physically, intellectually, emotionally and academically prepared when caring for patients.

Student Code of Conduct (http://pnp.aub.edu.lb/general/conductcode/index.html)

The purpose of this code is to provide students with a clear statement of the standards of behavior expected in an educational environment, so that they make responsible choices regarding their

participation in the academic community and understand the consequences of their infringement of these standards. Violations may be of an academic or non-academic nature.

Jurisdiction of academic violations lies initially under the authority of the Dean of the faculty or school to which the student belongs. Misconduct that is clearly non-academic falls under the jurisdiction of the Dean of Student Affairs who will take the necessary action in consultation with the Dean(s) of the faculty or school to which the student belongs.

The following are examples of actions deemed in violation of the Student Code of Conduct; they are not intended to define misconduct in exhaustive or exclusive terms. Any student who violates the principles described in the preamble to this document shall be subject to disciplinary action in accordance with the Student Code of Conduct.

I. Definitions of Misconduct

A. Academic Misconduct

Offences involving academic misconduct include, but are not limited to, the following:

1. Cheating

While taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, cell phones, or another's work.

Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

2. Plagiarism

Whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.

3. In-Class Disruption

Students in class are expected to behave appropriately, and shall not disrupt classes or exams by extraneous conversation and/or misbehaving.

4. Dishonesty

Students are expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).

b. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).

c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

d. Stealing or damaging library books.

e. Unlawfully copying computer software.

f. Engaging in bribery of any kind.

B. Non-Academic Misconduct

1. Disruption/Obstruction

Students have the right to express their opinions on matters of concern to the University in an organized manner and in a public space, excluding residences on campus, but they must notify and consult with the Dean of Student Affairs before doing so. The nature of the event and any publicity accompanying it must be reviewed by the dean to assure that neither Lebanese law, nor university policies and norms are being violated.

In cases where student-sponsored events, including protests, sit-ins, and demonstrations are, after such consultation, not approved by the Dean of Student Affairs, or, if needed by the Board of Deans or the president, it may become necessary for the dean of student affairs to undertake disciplinary measures and even to instruct campus protection to bring the public gathering to an end.

Disrupting or obstructing the normal educational process or any university function or activity by student demonstrations, sit-ins, or 'strikes' is strictly prohibited. This includes, but is not limited to: disrupting classes, library operations, seminars, exhibitions, meetings, ceremonial events, or examinations; impeding or preventing others from attending such events; falsely activating a disaster alarm; or making a threat.

Under no circumstances are any members of the university family to be intimidated or threatened in the execution of their normal duties and responsibilities. That means that students and faculty who wish to hold or attend classes or to go to their offices or places of study shall not be prevented from doing so; non-academic staff and administrators shall not be impeded from going to their places of work.

2. Distribution of Unauthorized Published Material

The public distribution and posting of published materials such as fliers, leaflets, posters, audiovisuals, etc., must be approved and stamped by the Dean of student Affairs. The campus protection office will remove from display any such unauthorized material.

Students must not distribute, possess, store, or use, on campus or at a university-authorized event off campus, any kind of weapon, device, explosive, dangerous chemicals, hazardous materials, or any other instrument designed to do bodily harm or to threaten bodily harm. Instruments used to simulate such weapons, which endanger or tend to endanger any person, shall be considered weapons.

Students are also prohibited from distributing, possessing, storing, transferring, selling or attempting to sell, delivering, using or attempting to use, any illegal drugs, narcotic or hallucinogenic, on campus or at any university-authorized event off campus.

3. Theft

Stealing on campus or at a university-authorized event off campus, including unauthorized use of university equipment or services (e.g., telephones, photocopiers, or computer facilities), or possession of stolen property, is prohibited.

4. Destruction of Property/Endangering Public Safety

Students are expected to protect university property and to respect the safety of others. Acts contrary to these principles, which include, but are not restricted to, the following, are subject to disciplinary procedure:

a. Engaging in vandalism or other intentional damage (such as spray painting or graffiti) to property on campus or at university-authorized events off campus.

b. Littering, such as disposing of waste (empty bottles, cigarette butts, food containers, etc.) in other than designated places on campus.

c. Unjustified discharge, damaging, or tampering with any fire extinguisher, fire alarm, or other safety devices.

d. Taking, or attempting to take, action that damages or could damage private property, without the consent of the owner or person legally responsible.

e. Appropriating, or attempting to appropriate or possess, private property, without the consent of the owner or person legally responsible.

f. Unauthorized entry, unapproved duplication of keys or use of such, or unauthorized use of campus facilities.

5. Mental or Physical Harm

Acts that inflict mental or physical harm are prohibited, including the following:

a. Engaging in physical aggression including, but not limited to, assault.

b. Engaging, or attempting to engage, in intimidation, coercion, extortion, blackmail, or bribery; bullying; threatening violence, injury, or harm to others on campus or at university-authorized events off campus; endangering or tending to endanger the safety, health, or life of any person.

c. Engaging in behavior that creates a substantial risk of, or results in, injury to others, such as committing arson or causing a riot.

d. Using force, inciting violence, inflicting or attempting to inflict injury to others on campus or at a university-authorized event off campus.

e. Engaging in any activity that endangers the health and safety of an individual or demeans an individual in conduct of an unbecoming or humiliating nature, or in any way that detracts from an individual's academic pursuits.

6. Possession of Dangerous Weapons or Materials

Students must not distribute, possess, store, or use, on campus or at a university-authorized event off campus, any kind of weapon, device, explosive, dangerous chemicals, hazardous materials, or any other instrument designed to do bodily harm or to threaten bodily harm. Instruments used to simulate such weapons, which endanger or tend to endanger any person, shall be considered weapons.

Students are also prohibited from distributing, possessing, storing, transferring, selling or attempting to sell, delivering, using or attempting to use, any illegal drugs, narcotic or hallucinogenic, on campus or at any university-authorized event off campus.

7. Discrimination and Harassment

Students are not allowed to discriminate on the basis of race, gender, age, religion, national origin, ethnic origin, marital status, mental or physical disability. Nor shall they harass, intimidate, insult, or threaten others whether verbally, in writing, or through electronic means.

Engaging in sexual harassment, e.g., requests for sexual favors, unwelcome sexual advances, unwelcome physical contact of a sexual nature, spoken comments or abuse (including email) of a sexual nature, and the public display of sexually suggestive objects or pictures is prohibited (refer to the University Policy Against Discrimination and Harassment).

8. Smoking and Alcohol

The consumption of alcohol, on campus, by students is not permitted. Smoking is not permitted in university buildings other than private residences and those areas within the student dormitories, as may be designated from time to time by the Dean of Student Affairs (refer to the University Policy on Smoking). Students must abide by the following:

- Smoking is not permitted in any University building, including the Medical Center, except for private residences and student dormitory rooms, as may be designated by the Dean of Student Affairs. Smoking is prohibited in all dormitory common rooms, corridors, lavatories, and other public spaces. Smoking is prohibited in all university vehicles.
- Persons smoking in outside open areas, or in private residences, or in designated dormitory rooms where smoking is permitted, are required to ensure that smoking materials are disposed of in a tidy and safe manner. On no account are cigarette butts to be disposed of on the ground or thrown into the wooded or landscaped areas.
- All persons on AUB property are expected to respect this Smoking Policy. Breaches of the Policy should be reported to the Environmental Health and Safety Center,

extension 2360. Persons who are found to have breached the Policy will be subject to disciplinary actions.

9. Inappropriate Sexual Behavior

Publicly engaging in sexual behavior is prohibited as deemed by Lebanese law.

10. Use of Computers

Accessing protected computer accounts or other computer functions, knowingly transmitting computer viruses, and unethical use of AUB access is prohibited (refer to the University Policy on the Use of Computers).

II. Jurisdiction over Violations

AUB holds all students responsible for actions occurring on campus and at the AUB Farm, the AUB medical center, and university-authorized events.

Students attending an off-campus function as representatives of the University (such as, but not limited to, students serving on academic or athletic teams or engaging in club activities) are subject to disciplinary sanctions for violations of this code.

III. Disciplinary Actions

Disciplinary action will be imposed according to the nature (academic or non-academic) and severity level of the violation.

A. Academic Misconduct

In principle, enforcement of disciplinary actions for academic violations is carried out by those immediately responsible.

It is the responsibility of the faculty to uphold university policies. Thus, the immediate responsibility for dealing with instances of cheating, plagiarism, and other academic violations rests with the faculty member. If a faculty member has good reason to believe that a student has violated academic standards, it is his or her responsibility to discipline the student expeditiously. A faculty member who has good reason to believe that a student has violated academic standards must give a grade of zero on the exam or assignment where the violation occurred.

When the instructor has taken disciplinary action, he or she should send a letter to the Student Affairs Committee in the faculty or school in which the student is enrolled, informing that committee of the incident and the action taken. A copy of the letter will be placed in the student's file, as well as forwarded to the student's advisor for follow-up.

B. Non-Academic Misconduct

Violations of a non-academic nature are the responsibility of the Dean of Student Affairs, in consultation with the dean of the faculty or school in which the student is enrolled and, as necessary, the chief of campus protection. Students should know that the laws of the

Republic of Lebanon apply on campus, and those who violate these laws may be subject to criminal prosecution.

C. List of Primary Disciplinary Actions

Documentation of disciplinary actions, other than suspension and expulsion, will not become part of the student's permanent record. Records of the University Disciplinary Committee decisions, including charges and sanctions, will be maintained as part of the confidential records in the office of the respective Dean, for a period of up to four years after the student graduates or ceases to be a student.

D. Required Withdrawal from Campus Pending Hearing

In extraordinary circumstances, when the student's continued presence is deemed a danger to the university community, the student will be required to withdraw from the campus, pending a meeting of the University Disciplinary Committee. This action shall normally require the approval of the president of the University.

E. Secondary Disciplinary Actions

In addition to the disciplinary actions listed above, the following secondary disciplinary actions may be imposed upon those who violate the Student Code of Conduct. Secondary disciplinary actions may be of an academic or non-academic nature

IV. Complaint Procedure

Any person subject to, or who witnesses, a violation of the Student Code of Conduct should forward a written complaint to a faculty member, a chairperson, or any university official. Academic violations shall be forwarded to the dean of the faculty to which the student accused of the violation belongs. Non-academic violations shall be referred to the dean of student affairs. Violations that may require suspension or expulsion will be referred by the concerned dean to the University Disciplinary Committee.

The University Disciplinary Committee will deal with alleged violations in a manner that ensures that those charged with a violation the committee may take into consideration the student's cumulative discipline record.

Range of Actions

Informal Warning

This may be oral or written. It is a statement that the student has inadvertently violated a university regulation. The warning will be recorded in the respective Dean's records and the student will be documented.
Examples: *Littering and smoking in prohibited areas.*
Reprimand

This will be in writing. It is a statement that the student has violated a university regulation. It is intended to communicate most strongly, both the disapproval and the reprimand of the university community. The reprimand will be kept in the respective Dean's records.
Examples: *Inadvertent plagiarism - failure to cite sources appropriately, and inappropriate physical contact.*
Dean's Warning

This will be in writing. Only two Dean's Warnings are allowed in a student's academic career at AUB. It is recommended that any violation of university regulations after the second Dean's Warning results in consideration of suspension. Such a warning is kept in the file of the student and the respective Dean's records.
Examples: *Plagiarism, academic dishonesty, disruption-obstruction, mental or physical harm, discrimination and harassment.*
Suspension

This will be in writing and will form part of the student's permanent record. A student will be suspended for a fixed period of time during which the student may not participate in any academic or other activities at the University. At the end of the suspension period, the student may be readmitted to the University, only upon the recommendation of the University Disciplinary Committee.
Examples: *Cheating, theft, and destruction of property.*
Expulsion

This will be in writing and will form part of the student's permanent record. Expulsion denies the student the right to participate in any academic or other activities of the University for an indefinite time. Only under the most unusual circumstances, and upon the recommendation of the University Disciplinary Committee, will an expelled student be readmitted to the University.

Examples: *Academic dishonesty, possession of dangerous weapons or materials, and endangering public safety.*

N.B. Any person who maliciously lies to cover up an act sanctioned by the code of conduct will be considered to be an accessory after the fact and may be subject to disciplinary action.

Secondary Disciplinary Actions – Academic

The student may be prohibited from participating in the work study program.

The student may be prohibited from receiving any form of financial aid, scholarship, or monetary award.

The student may be prohibited from receiving any form of honor, merit award, or other academic recognition award.

The student may be prohibited from holding a graduate assistantship.

The student may be given a failing grade in a course or a test or any other form of academic assessment.

Secondary Disciplinary Actions – Non-Academic

The student may be prohibited from representing AUB in any official role, activity, or event.

The student may be prohibited from serving as an officer of any AUB organization including club, team, or society.

The student may be prohibited from living in any AUB hall of residence or similar facility.

The student may be strongly advised to attend treatment or counseling as determined by the director of the counseling center, in consultation with the Dean of Student Affairs.

The student may be required to make financial restitution.

The student's case may be referred to an external agency for further action (this could include the filing of criminal charges).

V. Formal Hearing by the University Disciplinary Committee

The University Disciplinary Committee will deal with alleged violations in a manner that ensures that those charged with a violation understand the charge and the evidence against them and are afforded a reasonable right of rebuttal.

The University Disciplinary Committee shall inform the student of the charge in writing. Evidence shall be presented in the presence of the student who shall have a reasonable right of rebuttal including the right to cross-examine witnesses. In determining penalties, the committee may take into consideration the student's cumulative discipline record.

VI. Appeal Procedure

Any student who is charged with a disciplinary offense has the right to a full and fair hearing for any disciplinary charges brought against him or her under university regulations.

If any of the following apply, a student may appeal to the Dean of the faculty or school regarding faculty or departmental decisions, or to the University Disciplinary Committee against disciplinary action taken by the Dean of Student Affairs or the dean of the faculty or school to which the student belongs:

1. Procedural error
2. New evidence
3. Unsupported conclusion
4. Disproportionate sanctions

The outcome of this appeal may result in higher, lower, identical, or no sanctions at all being imposed. The University Disciplinary Committee's decision shall be final.

Students Rights and Responsibilities

Students are members of the academic community and are also citizens. As citizens, students enjoy the same freedom of speech and right to petition that all citizens enjoy. Students have the responsibility to know and obey Lebanese law and the laws of the University. It is the responsibility of the student to know institutional regulations, policies, and established guidelines as stated in this handbook and in the University Catalogue. Students are accountable for their behavior at all times. Students have the right to freedom from discrimination on the basis of race, color, religion, sex, and age. Students have the right to be informed, in writing, of the expected behaviors and standards by which they will be evaluated prior to participating in classrooms and clinical activities. Students have the right to academic evaluations which are not prejudiced and which are based on stated course requirements. As members of the academic community, students are free, individually or collectively, to voice constructive criticism through identified channels on issues of institutional policy, curriculum, and matters of general interest to the student body without fear of reprisal.

While under the direct supervision of an instructor, students also have the right to adequate safety precautions provided by the School of Nursing. Students also have the right to negotiate participation in clinical situations which they feel are threatening to their personal health or life. Students, individually or collectively, have the right to expect, within a reasonable length of time, feedback concerning all student related issues presented to the faculty.

Freedom in the Classroom

Students are responsible for the content of the courses in which they enroll. They are also free to take reasoned exception to the data or views offered in any course of study, and reserve judgment about matters of opinion.
Students are responsible for complying with standards of academic performance required by each course in which they are enrolled. Such standards shall be communicated clearly in writing on or before the first meeting of each course. Students should have protection against prejudiced, arbitrary, and capricious academic evaluation.

Student Representation on Rafic Hariri School of Nursing Committees

Student representation on Rafic Hariri School of Nursing committees is encouraged. Students can request that items be placed on the agenda of any School of Nursing committee for discussion.

UNIVERSITY SERVICES

Student Services at the Rafic Hariri School of Nursing

Getting in Touch with the Right People at the Rafic Hariri School of Nursing

Students are encouraged to communicate any concerns they might have to the appropriate persons. They can refer to the Student Services Officer for the following issues:

- Answering queries about the BSN and MSN programs
- Student orientation and advising
- Follow up on different awards and scholarships available to nursing students
- Problems in registration (opening capacity, removing restrictions, resolving time conflict problems, removing holds, selection of elective courses, drop and add courses)
- Dealing with the administrative body (Registrar's office, Office of Financial Aid, Office of Student Affairs and specific committees at HSON)
- Writing and submitting petition letters (underload/overload credits, late registration, medical reports, course withdrawal, reactivation and readmission etc.)
- Selection of specific academic forms for internal and external procedures
- Program evaluation and satisfaction surveys
- Career guidance and work opportunities
- Student related activities such as student elections, NSS activities and graduation parties etc.
- Requesting credentials after their graduation.

The Student services office seeks to assist and guide nursing students to develop their plan to academic success, by referring them to the appropriate resources and procedures, and ensuring that they are complying with AUB academic rules and regulations.

Issues related to a particular course are best discussed with the course coordinator. Problems with a student's academic progress should be followed up with the assigned advisor. Students may discuss issues related to a particular class with their advisers. There is one class advisor for each of the three years: BSN II, BSN III, and BSN IV. If the student cannot resolve problems with the course coordinator, adviser, or class adviser, he/she should talk to the BSN coordinator, and then the BSN convener. If necessary, issues are referred to the Director of the School.

Other services offered at HSON:

- Requesting lockers at the locker room
- Requesting badges
- Requesting name pins
- Completing the Clearance process upon graduation or withdrawal from the university
- Facilitating colloquium papers

Simulation and Clinical Competency Center (SCCC)

The Simulation and Clinical Competency Center (SCCC) was established by the Hariri School of Nursing in 2009 to assist AUB students, faculty and healthcare practitioners to achieve higher levels of competence and safer patient-care. Individual students use the Lab facility for self-appraisal; faculty uses it for evaluation purposes and our hospital partners (AUBMC) use it to enhance clinical practice.

Introduction to Simulation

Simulation started with the aviation industry and it improved pilot performance and airline safety. Simulation is defined as the deliberate creation or imitation of a situation for the purpose of learning using different techniques and technologies.

Simulation in healthcare education is considered an effective tool in clinical teaching. Simulation has the potential to provide immersive, interactive, reflective team-learning experiences in a controlled environment. In simulated environment students learn practical skills (e.g., medication injection), communication skills (obtaining patient history) to critical thinking and decision making skills regarding the care of the simulated patient. The tools of simulation range from single body part, as an arm for injection, to full-body mannequin that are physiologically responsive, to actual people playing the patient's role.

Who Uses SCCC Lab?

- AUB students from nursing, medicine, pharmacy and other health related disciplines
- AUBMC practitioners from all disciplines
- Non-AUB health-care students and practitioners after securing a special permission

Why Use Simulation?

- Safe learning environment: Simulation presents a safe learning experience for healthcare students and practitioners (It is a safe place to make mistakes and learn from them - the patient can't be harmed!)
- Increase in skill development: Simulation offers a chance to practice a skill repeatedly until mastery (with or without instructor guidance)
- Builds effective healthcare teams: Simulation brings people from different healthcare disciplines to work together as a team- a requirement for safe patient care

Location and Hours of Operation

Located on the 2nd floor of the Hariri School of Nursing, the SCCC is composed of 5 spacious rooms which can be used for classrooms, skills training and physical assessment. One room is designated for high fidelity scenarios (houses the highly interactive manikin) and includes a control area and a debriefing space.

The SCCC is open Monday to Friday from 8 am to 5pm during the academic year.

Booking Ahead Of Time

All are urged to book the Lab ahead of time. Priority in booking the SCCC is given to educational programs for AUB nursing and medical students. To schedule a session at the Lab, the student/learner must send an email to the Lab coordinator (Randa Farha rf37@aub.edu.lb). The coordinator in turn will confirm by email based on Lab availability. Any changes to an existing request for a session at the SCCC must be submitted by email to the Lab coordinator.

Code of Conduct

The following are binding practices for everyone using the SCCC facility (faculty, clinical teachers and students):

- No food or drink is allowed at any time in the Lab.
- No personal items are to be placed on the beds.
- Wash hands before coming to the center – use available alcohol-based hand sanitizers.
- Sign in at all times for both practice and testing on the attendance sheet
- Treat manikins like people. Treat simulators with respect as if they were real patients- handle them gently and with care.

- Only manikin lubricant can be used on the simulators when inserting objects (e.g. catheters).
- Never use ink pens at the bedsides as ink permanently stains the manikins. Please use pencil or only write at the tables at the end of the bed
- Gloves must be worn when coming in contact with the simulators (SimMan, SimBaby and NOELLE).
- Leave the center in the same condition it was when you first started (place all the chairs back at the tables, make the bed and return all equipment and supplies to the area where found).
- Sign a confidentiality agreement not to disclose any of the proceedings of a scenario outside the Lab. Report any violation to faculty.

Definitions

Effective simulation-based learning experiences are structured to include a pre-brief and a debrief component. The following are important definitions to learn:

PRE-BRIEF FOR A SIMULATION

Pre-brief is defined as an orientation session held prior to the start of a simulation-based learning experience in which instruction or preparatory information is given to the participants. It is the foundation of a successful simulation learning experience.

DEBRIEFING AFTER SIMULATION

Debriefing is the discussion that immediately follows a simulation-based experience. It is facilitated by an educator who observes the simulated experience. The discussion fit participants' objectives and outcomes of the simulation-based learning experience. Debriefing aims to promote reflective thinking. True learning occurs through a process of self-reflection. Effective debriefing is conducted in an environment that is conducive to learning and supports confidentiality, trust, open communication, self-analysis, and reflection.

University Libraries

The AUB library system consists of two main libraries: the University Libraries and Saab Memorial Medical Library.
The University Libraries include the Jafet Memorial Library (the Central Library) and two branch libraries: the Engineering and Architecture Library, and the Science and Agriculture Library with its annex AREC (Farm) Library.

The University Libraries are currently open 90 hours per week. The schedules of the libraries differ. Refer to the AUB website, click on libraries, in order to know the opening hours. Librarians also send regular emails regarding changes in their operating hours in the various semesters and during holidays. All libraries have photocopying machines that are available for student use. A card containing 100 photocopying units may be bought for 5, 000 LL in vending machines located in each library. Photocopying is also offered at the University Book Store for a small fee.

The Saab Medical Library (SML) is probably the one you will be using the most. The SML collection consists of 1,200 printed periodical subscriptions; over 82,320 back file periodical volumes, nearly 42,000 books, and nearly 2,300 audio-visual items, including computer software. SML has a large number of the most important bibliographic medical and allied health databases, and more than 2,500 electronic journals. SML is accessible through the internet at

http://www.aub.edu.lb/libraries/medical. The library has a special collection called the Lebanese Corner, http://192.168.100.187/, which includes publications about Lebanon or by Lebanese authors in the fields of medicine and other health-related topics. Databases are currently accessible via the AUB website.

Computing and Networking Services

Computing and Networking Services (CNS) provides access to different services that require user authentication. Before using the service, you must activate your **AUBnet account**: The AUB net account provides e-mail, intranet, and Internet access, in addition to other services such as roaming storage space, network printing, and personal web site space. You must activate your AUB net account before you can activate other accounts.

The **AUBsis account** provides access to the AUB Student Information System, a web-based application designed to provide the following on-line services to students and faculty: On-line Registration, Drop and Add, Class Schedules, Grades, Student Transcripts, Address Information, and Billing Statements.

Student computer labs are located throughout the University, including the libraries, faculty of medicine and faculty of health sciences buildings, among others.

An Internet fee of 300, 000 LL is charged every year and will automatically be added to the statement of fees. The quota of Internet data per month per student is 100MB. This is a combined quota of web and e-mail data. Through the AUB Net Resources web site you can find out your Internet data usage for the month. No limit exists on the time spent browsing and sending information on the web. The limit is only on the volume of data that is sent/received in the process.

Access to computer hardware, software, intranet, and the Internet services is provided to students for enhancing their learning. Access to the use of AUB computer facilities is through authorized computer accounts. Students must abide by the AUBnet Code of Conduct for Users of Computing System and Internet Services.

A computer account consists of a unique log-in ID and a password. Your log-in ID tells the computer system who you are. You must always keep your password secret. To activate your AUB computing accounts go to http://www.aub.edu.lb, select ”Get your AUB Computing Account,” and follow the instructions.

Student E-mail Address

To ensure that students receive timely communication and important announcements, the student’s current email address must always be on file in the School of Nursing. Every student is provided with an e-mail address. It is strongly recommended that all students use their AUB e-mail address as their primary one for the duration of the time they are studying here, to avoid missing announcements or other important communication from faculty and staff. We suggest that you get an email account during orientation week and check your email once per day.

The Writing Center

For students who need assistance in writing papers or projects, the AUB writing center located in West Hall Room 307 provides assistance. Tutors from the Department of English are available Monday through Friday 9 am – 3 pm and consulting services are free. The extension to call for taking appointments is 3157.

The Counseling Center

Adjusting to university life may be difficult for some students. For students who experience personal difficulties that lead to anxiety, depression or other psychological problems, the counseling center can provide assistance. The counseling team can assist with study related issues such as exam anxiety and time management, Counseling is free and confidential. The center is located in West Hall Room 206. The extension to call is 3196 or 3178.

Bookstore

The University Bookstore is located at the back of Bliss Hall across from Penrose Hall. It stocks most of the required textbooks for specific courses, dictionaries, and other reference works, and a limited number of general publications. Assorted AUB items and gifts such as clocks, mugs, T-shirts, and binders are also available.

Mail Service

The University Post Office, located in the basement of Ada Dodge Hall, handles local campus mail and mail for the Lebanese postal services. To secure a campus mailbox a student must show a receipt of fee payment at the AUB Post Office. Urgent mail may be sent by Aramex through the AUB Post Office. A special rate is offered to the AUB community. Also DHL offers special rates at the AUB Bookstore.

Food Service

The University operates a modern, cafeteria-style food service on campus in Ada Dodge Hall. In addition to the main cafeteria the University also maintains the Mary Dodge Hall Cafeteria, the Engineering Cafeteria, and the Agriculture Kiosk. These facilities provide a variety of hot and cold refreshments for students and their guests. Vending machines are available in a number of university buildings.

Students Housing

AUB is a residential university. For more information, check the AUB Catalogue, or check the Student affairs Office website at: http://staff.aub.edu.lb/~websao/house/.

Student Transportation

AUB allows very limited automobile access to campus: only students suffering from illness or disabilities may bring cars on campus. Authorization from the Infirmary must be received before a permit can be issued. Students should contact Business Services at extension 3510 for a special permit.

Students with Disabilities

Students with disabilities applying to AUB are strongly encouraged to make their disability known to the Admission Office. This information will not affect the decision on admission; rather, it will give the University the opportunity to offer specific assistance and support through programs and services provided by different departments on campus. Students need to consult with their advisers for assistance.

UNIVERSITY HEALTH SERVICES

Medical Record

An entrance medical record form will be sent to all admitted students who have made the commitment to enroll at AUB. The form should be completed by the student's family physician and mailed before the period of registration. Alternatively the completed form may be delivered by hand to the Office of Admissions.

All new students must have a tuberculin test at the time of the preliminary medical check, held during registration, and must report 48 hours later for the check on the test. Upon clearing the medical test, the student will be issued a clearance slip to proceed with registration. Students will not be registered unless they obtain this clearance slip. Medical checks may be completed in advance of registration provided that the student reports to the University Health Services on campus and brings along a letter of acceptance and the entrance medical record.

Returning students are not required to complete any medical forms. Important changes in the student's medical condition and/or updating immunizations should be reported to a University Physician by appointment at the Health Services Center. Information will be kept confidential.

All nursing students are required to go check on their Hepatitis B status, prior to commencing clinical..

The University Health Services (UHS) provide medical care to members of the university community in Sawaf Building at the following office hours:

Office hours: Monday through Friday

- **Offices** 8:00 a.m. - 5:00 p.m.
- **Clinics** 8:00 a.m. - 7:00 p.m.

Office hours: Saturday

- **Clinics** 10:00 a.m. - 2:00 p.m.

The Sawaf building is located near the AUB Medical Center. Appointments can be made at the reception desk. A physician is also available to receive patients on a walk-in basis. Walk-in patients must have problems of an urgent nature; otherwise, they will be given appointments for a later time. In case of emergency, the patient should report directly to the Emergency Unit at the AUB Medical Center or to the nearest Emergency Service.

Health Insurance Plan (HIP)

Students may elect to enroll in the University's Health Insurance Plan (HIP), provided they register for at least six credit hours. Students enrolled in the spring semester are covered until September 30, provided they do not leave the University or drop all of their courses. A married student will have the option of including his/her spouse and children for an additional fee. A student may be exempt from enrolling in HIP if he/she presents proof of coverage by another health insurance plan. HIP covers only those expenses incurred at the AUB Medical Center. Medical bills from other institutions are not covered.

National Social Security Fund (NSSF) Medical Branch

Membership in the NSSF is mandatory by law for all Lebanese students, excluding freshman and special students, and students who are older than 30 years. Non-Lebanese students may not join NSSF. To facilitate enrollment in the NSSF Medical Branch, students are required to bring the following items when registering:

- A social security application form filled in correctly. Copies of this form will be available for distribution at the time of registration to students.
- A photocopy of the Lebanese Identity Card.
- Their NSSF number if already registered.
- The NSSF number of either parent if insured with the NSSF through father or mother.

STUDENT EXTRACURRICULAR ACTIVITIES

Clubs and Societies

Opportunities for students to participate in extra-curricular activities, generally organized under the auspices of student-governed societies or clubs, are numerous at AUB. Membership is open to all registered students upon completion of a membership application and payment of a nominal fee. Almost all student clubs provide an outlet for artistic expression: Art, Music, Photography, and Poetry Clubs. For further information or to obtain a list of active clubs and societies, go to the Office of Student Activities in West Hall, extension 3182.

Nursing Student Society

The Nursing Student Society (NSS) brings together nursing students from all levels to engage in various professional and social activities, under the guidance of an assigned faculty advisor. Objectives of the NSS are to:

- Serve as an organization through which matters related to the welfare of students and the school is transacted.
- Provide a channel for coordination of activities between the students and faculty members, and with other student organizations.
- Organize activities that promote a spirit of loyalty and fellowship among the student body.
- Provide means for active participation in activities that foster the personal, professional and civic development of students.

The NSS has three standing committees:

1. The Educational Committee organizes educational programs of interest to the community.
2. The Social Committee is responsible for social and recreational activities.
3. The Publicity and Finance Committee is responsible for publicity and financial matters.

Athletics and Recreation

The University offers a wide range of sports, athletic and recreational programs through its Athletics Department. Facilities include AUB's Green Field, which hosts international, national, and varsity sports tournaments. The Green Field includes the University's soccer field, lighted outdoor basketball courts, lighted outdoor volleyball courts, and a lighted 450-meter track.

IMPORTANT TELEPHONE NUMBERS

Finally, here are some helpful telephone numbers for you to have:

Clubs and Student Activities (West Hall)	3182
Emergency Room	6604
Financial Aid	3160
Housing	3175
Infirmary, University Health Services	3000
Registrar	2570
Student Affairs	3170
School of Nursing	5950, 5951

Appendix A

Clinical Practicum Orientation Tips

These are simple "tricks" for a good clinical experience

- **Punctuality:** Be 15 minutes early to the rotation. Have a good breakfast before coming.
- **Preparation:** Make sure you have all the equipment you need and that you reviewed your notes very well ahead of time.
- **Dress Code:** Wear clean shoes and clothes, shave, everyone will respect you when you dress well and act in a professional way.
- **Caring:** Make a special time to go to the patient's room and discuss their condition.
- **Self Learner:** Be interested to learn more, ask whatever question that pops to your head, and just enjoy the learning experience.
- **Professionalism:** Maintain a positive relationship with your preceptor, your fellow students and health care team.
- **Safety:** Assure your own safety. Ensure you have completed your HBV. HAND HYGINE IS VERY IMPORTANT KEEP IT IN MIND.

AMERICAN UNIVERSITY OF BEIRUT

RAFIC HARIRI SCHOOL OF NURSING

MINUTES OF FACULTY MEETING

DATE AND TIME: May 18, 2018 at 2:00 p.m.

PLACE: School of Nursing Conference Room #605

PRESIDING: Dr. Huda Huijer, HSON Director

MEMBERS PRESENT: Dr. M. Adra, Dr. N. Alayan, Mrs. M. Arevian, Dr. G. Assaf, Mrs. T. Avedissian, Dr. M. Clinton, Mrs. S. Dakessian, Dr. H. Darwish, Dr. S. Dhaini, Dr. N. Dumit, Dr. S. Fares, Dr. L. Farhood, Mrs. T. Gulgulian, Dr. G. Honein, Dr. L. Kantar, Mrs. M. Khoury, Dr. D. Madi, Dr. A. Massouh, Dr. S. Noureddine, Ms. H Tashjian and Dr. L. Younan.

MEMBERS ABSENT: Mrs. D. Damianos

I. APPROVAL OF MINUTES

- Minutes of March 07, 2018: Minutes approved as corrected.

II. UPDATE ON MINUTES

- No updates on the minutes of March 07, 2018.

III. TENURE AND PROMOTION EVALUATION CRITERIA

A motion was made to approve the document circulated by email titled "Policy and Procedures for Tenure and Promotion Evaluation of Tenure-Eligible Faculty Members" and seconded. Members discussed the document by going through it page by page. All questions were addressed by the task force.

Motion: 2018.01: Motion to recommend the approval of the tenure and promotion evaluation criteria document was made by Dr. Laila Farhood and seconded by Dr. Samar Noureddine.

Vote: 2018.01: Motion was approved (8 – 0 – 1) by secret ballot

IV. CRITERIA FOR PROMOTION ON THE CLINICAL TRACK

It was agreed by all members prior to the meeting and after the circulation of the agenda to postpone the discussion and vote on the document to another full faculty meeting.

V. FACULTY STATUS REPORT

Dr. Huijer informed the faculty that the working group on the independent faculty status document was appointed by Dean Sayegh and not by her. The report was presented by an introductory recapitulation of the work process. The report was prepared based on feedback from HSON faculty during the retreat, the documents provided by the HSON administration, and feedback of the working group. A motion was made to approve the report and seconded.

Motion: 2018.02: Motion to recommend the approval of the faculty status report was made by Dr. Nuhad Dumit and seconded by Dr. Hala Darwish.

Votes: 2018.02: Motion was approved (20 – 0 – 1) by secret ballot

Meeting adjourned at 4:30 p.m.
Minutes Recorded by Patricia Assaf Chedid

Executive Summary
The Essentials of Baccalaureate Education for Professional Nursing Practice (2008)

This *Essentials* document serves to transform baccalaureate nursing education by providing the curricular elements and framework for building the baccalaureate nursing curriculum for the 21st century. These *Essentials* address the key stakeholders' recommendations and landmark documents such as the IOM's recommendations for the core knowledge required of all healthcare professionals. This document emphasizes such concepts as patient-centered care, interprofessional teams, evidence-based practice, quality improvement, patient safety, informatics, clinical reasoning/critical thinking, genetics and genomics, cultural sensitivity, professionalism, and practice across the lifespan in an ever-changing and complex healthcare environment

Essentials I-IX delineate the outcomes expected of graduates of baccalaureate nursing programs. Achievement of these outcomes will enable graduates to practice within complex healthcare systems and assume the roles: provider of care; designer/manager/coordinator of care; and member of a profession. Essential IX describes generalist nursing practice at the completion of baccalaureate nursing education. This Essential includes practice-focused outcomes that integrate the knowledge, skills, and attitudes delineated in Essentials I – VIII. The time needed to accomplish each Essential will vary, and each Essential does not require a separate course for achievement of the outcomes.

The nine Essentials are:

- **Essential I: Liberal Education for Baccalaureate Generalist Nursing Practice**
  - A solid base in liberal education provides the cornerstone for the practice and education of nurses.
- **Essential II: Basic Organizational and Systems Leadership for Quality Care and Patient Safety**
  - Knowledge and skills in leadership, quality improvement, and patient safety are necessary to provide high quality health care.
- **Essential III: Scholarship for Evidence Based Practice**
  - Professional nursing practice is grounded in the translation of current evidence into one's practice.
- **Essential IV: Information Management and Application of Patient Care Technology**
  - Knowledge and skills in information management and patient care technology are critical in the delivery of quality patient care.
- **Essential V: Health Care Policy, Finance, and Regulatory Environments**
  - Healthcare policies, including financial and regulatory, directly and indirectly influence the nature and functioning of the healthcare system and thereby are important considerations in professional nursing practice.
- **Essential VI: Interprofessional Communication and Collaboration for Improving Patient Health Outcomes**
  - Communication and collaboration among healthcare professionals are critical to delivering high quality and safe patient care.

- **Essential VII: Clinical Prevention and Population Health**
    - Health promotion and disease prevention at the individual and population level are necessary to improve population health and are important components of baccalaureate generalist nursing practice.
- **Essential VIII: Professionalism and Professional Values**
    - Professionalism and the inherent values of altruism, autonomy, human dignity, integrity, and social justice are fundamental to the discipline of nursing.
- **Essential IX: Baccalaureate Generalist Nursing Practice**
    - The baccalaureate-graduate nurse is prepared to practice with patients, including individuals, families, groups, communities, and populations across the lifespan and across the continuum of healthcare environments.
    - The baccalaureate graduate understands and respects the variations of care, the increased complexity, and the increased use of healthcare resources inherent in caring for patients.

Learning opportunities, including direct clinical experiences, must be sufficient in breadth and depth to ensure the baccalaureate graduate attains these practice-focused outcomes and integrates the delineated knowledge and skills into the graduate's professional nursing practice. Clinical learning is focused on developing and refining the knowledge and skills necessary to manage care as part of an interprofessional team. Simulation experiences augment clinical learning and are complementary to direct care opportunities essential to assuming the role of the professional nurse. A clinical immersion experience provides opportunities for building clinical reasoning, management, and evaluation skills.

Introduction

The Essentials of Baccalaureate Education for Professional Nursing Practice provides the educational framework for the preparation of professional nurses. This document describes the outcomes expected of graduates of baccalaureate nursing programs.

The Essentials apply to all pre-licensure and RN completion programs, whether the degree is baccalaureate or graduate entry. Program curricula are designed to prepare students to meet the end-of-program outcomes delineated under each Essential.

Background

The healthcare delivery system has changed dramatically since *The Essentials of Baccalaureate Education for Professional Nursing Practice* was endorsed by the American Association of Colleges of Nursing (AACN, 1998). Building a safer healthcare system has become the focus of all health professions following numerous reports from the Institute of Medicine (IOM, 2000, 2001, 2004), American Hospital Association (2002), Robert Wood Johnson Foundation (Kimball & O'Neill, 2002), the Joint Commission (2002) and other authorities. Nursing has been identified as having the potential for making the biggest impact on a transformation of healthcare delivery to a safer, higher quality, and more cost-effective system. With the increasing awareness of the need for change in the healthcare system, the clinical microsystems (small, functional units where care is provided within the larger system) have become an important focus for improving healthcare outcomes (Nelson, Batalden, & Godfrey, 2007).

In addition to the concern over healthcare outcomes, the United States and the global market are experiencing a nursing shortage that is expected to intensify as the demand for more and different nursing services grows. Buerhaus, Staiger, and Auerbach (2008) reported that the U.S. may experience a shortage of more than 500,000 registered nurses by the year 2025. Despite annual increases in enrollments in entry-level baccalaureate nursing programs since 2001 (Fang, Htut, & Bednash, 2008), these increases are not sufficient to meet the projected demand for nurses. According to Buerhaus et al. (2008), enrollment in nursing programs would have to increase at least 40% annually to replace the nurses expected to leave the workforce through retirement alone. Addressing the need for an increased number of baccalaureate-prepared nurses is critical but not sufficient. Nursing must educate future professionals to deliver patient-centered care as members of an interprofessional team, emphasizing evidence-based practice, quality improvement approaches, and informatics (IOM, 2003b). Nursing education and practice must work together to better align education with practice environments (Joint Commission, 2002, Kimball & O'Neill, 2002;).

The environments in which professional nurses practice have become more diverse and more global in nature. Scientific advances, particularly in the areas of genetics and

genomics, have had and will continue to have a growing and significant impact on prevention, diagnosis, and treatment of diseases, illnesses, and conditions. The increased prevalence of chronic illness is a result of an increasingly older adult population, environmental threats, lifestyles that increase risk of disease, and enhanced technological and therapeutic interventions that prolong life. Increases in longevity of life have made the older adult the fastest growing segment of the population. In 2003, 12 % of the population was older than 65 years of age. By 2030, this population will increase to 20%, with a large majority older than 80 years of age (He, Sengupta, Velkoff, & DeBarros, 2005). Those older than 65 years of age had almost four times the number of hospitalization days than those younger than 65 years of age (Centers for Disease Control, 2007)

Education for the baccalaureate generalist must include content and experiences across the lifespan, including the very young who are especially vulnerable. The percentage of the population under 18 years of age is 24.6% (U.S. Census Bureau, 2008). U.S. infant mortality in 2006 ranked 38th in the world (World Health Organization, 2008). Prevention is critical in addressing both acute and chronic conditions across the lifespan. The role of the nurse in prevention continues to be of utmost importance.

Increasing globalization of healthcare and the diversity of this nation's population mandates an attention to diversity in order to provide safe, high quality care. The professional nurse practices in a multicultural environment and must possess the skills to provide culturally appropriate care. According to the U.S. Census Bureau (2008), the nation's minority population totaled 102 million or 34% of the U.S. population in 2006. With projections pointing to even greater levels of diversity in the coming years, professional nurses need to demonstrate a sensitivity to and understanding of a variety of cultures to provide high quality care across settings. Liberal education, including the study of a second language, facilitates the development of an appreciation for diversity.

Strong forces influencing the role of nurses include:

- scientific advances, particularly in the area of genetics and genomics,
- changing demographics of patient populations,
- new care technologies, and
- patient access to healthcare information.

These forces call for new ways of thinking and providing health care. Nursing is uniquely positioned to respond to these major forces, requiring an increased emphasis on designing and implementing patient-centered care, developing partnerships with the patient, and a focus on customer service.

Nursing Education

In response to calls for transforming the healthcare system and how healthcare professionals are educated, AACN has maintained an ongoing dialogue with a broad representation of stakeholders internal and external to nursing. The dialogue has focused on the knowledge, skills, and attitudes needed by nurses to practice effectively within this

complex and changing environment. New innovative models of nursing education have emerged, and AACN has taken a leadership role in crafting a preferred vision for nursing education.

In 2004, the AACN Board of Directors reaffirmed its position that baccalaureate education is the minimum level required for entry into professional nursing practice in today's complex healthcare environment. Baccalaureate generalist education, as defined in this document, is the foundation upon which all graduate nursing education builds.

The preferred vision for nursing education includes generalist, advanced generalist, and advanced specialty nursing education. Generalist nurse education occurs at a minimum in baccalaureate-degree nursing programs. Advanced generalist education occurs in master's degree nursing programs, including the Clinical Nurse Leader (CNL®), which is an advanced generalist nursing role. Advanced specialty education occurs at the doctoral level in Doctor of Nursing Practice (DNP) or research-focused degree programs (PhD, DNS, or DNSc). End-of-program outcomes for the baccalaureate, master's, and doctoral nursing programs build on each other.

The Discipline of Nursing

Roles for the baccalaureate generalist nurse are derived from the discipline of nursing. The roles of the baccalaureate generalist include:

- provider of care,
- designer/manager/coordinator of care, and
- member of a profession.

Nursing generalist practice includes both direct and indirect care for patients, which includes individuals, families, groups, communities, and populations. Nursing practice is built on nursing knowledge, theory, and research. In addition, nursing practice derives knowledge from a wide array of other fields and professions, adapting and applying this knowledge as appropriate to professional practice.

In the senior college and university setting, every academic discipline is grounded in discrete inquiry-based applications that are distinctive to that discipline. Scientific advances, (particularly in the area of genetics and genomics), changing demographics of patient populations, new care technologies, and patient access to health care information call for new ways of thinking and doing in the provision of health care. The academic setting provides a forum for contemplating physical, psychological, social, cultural, behavioral, ethical, and spiritual problems within and across disciplines. Faculty have a responsibility to facilitate the translation of knowledge from a liberal education base into the practice of nursing. Nursing faculty introduce nursing science and theories, and guide the student in developing an understanding of the discipline of nursing's distinctive perspective.

Baccalaureate-prepared nurses provide patient-centered care that identifies, respects, and addresses patients' differences, values, preferences, and expressed needs (IOM, 2003a). Patient-centered care also involves the coordination of continuous care, listening to,

communicating with, and educating patients and caregivers regarding health, wellness, and disease management and prevention. The generalist nurse provides the human link between the healthcare system and the patient by translating the plan of care to the patient. A broad-based skill set is required to fill this human interface role. Patient-centered care also requires the development of a nurse-patient partnership. Patients, as consumers of healthcare services, and as integral members of the healthcare team, have an increasing role and responsibility for the mutual planning of care and healthcare decision making.

The fundamental aspects of generalist nursing practice are: direct care of the sick in and across all environments, health promotion and clinical prevention, and population-based health care. A defining feature of professional nursing practice is the focus on health promotion and risk reduction. Advances in science and technology will continue to emerge, which will help to predict future health problems. Nurses will design and implement measures to modify risk factors and promote healthy lifestyles. These same advances in science and technology also have allowed individuals to live longer and often with increasing numbers of chronic illnesses and conditions. With an increasing emphasis on cost-savings and cost-benefits, nurses will play a leading role in the provision of care.

Assumptions

The baccalaureate generalist graduate is prepared to:

- practice from a holistic, caring framework;
- practice from an evidence base;
- promote safe, quality patient care;
- use clinical/critical reasoning to address simple to complex situations;
- assume accountability for one's own and delegated nursing care;
- practice in a variety of healthcare settings;
- care for patients across the health-illness continuum;
- care for patients across the lifespan;
- care for diverse populations;
- engage in care of self in order to care for others; and
- engage in continuous professional development.

Roles for the Baccalaureate Generalist Nurse

Baccalaureate Generalist nurses are providers of direct and indirect care. In this role, nurses are patient advocates and educators. Historically, the nursing role has emphasized partnerships with patients – whether individuals, families, groups, communities, or populations – in order to foster and support the patient's active participation in determining healthcare decisions. Patient advocacy is a hallmark of the professional nursing role and requires that nurses deliver high quality care, evaluate care outcomes, and provide leadership in improving care.

Changing demographics and ongoing advances in science and technology are a reality of healthcare practice. The generalist nurse provides evidence-based care to patients within this changing environment. This clinician uses research findings and other evidence in designing and implementing care that is multi-dimensional, high quality, and cost-effective. The generalist nurse also is prepared for the ethical dilemmas that arise in practice and will be able to make and assist others in making decisions within a professional ethical framework. Understanding advances in science and technology and the influence these advances have on health care and individual well-being is essential. Understanding patients and the values they bring to the healthcare relationship is equally important.

The generalist nurse practices from a holistic, caring framework. Holistic nursing care is comprehensive and focuses on the mind, body, and spirit, as well as emotions. The generalist nurse recognizes the important distinction between disease and the individual's illness experience. Assisting patients to understand this distinction is an important aspect of nursing. In addition, nurses recognize that determining the health status of the patient within the context of the patient's values is essential in providing a framework for planning, implementing, and evaluating outcomes of care.

The generalist nurse provides care in and across all environments. Nurses focus on individual, family, community, and population health care, as they monitor and manage aspects of the environment to foster health.

Baccalaureate generalist nurses are designers, coordinators, and managers of care. The generalist nurse, prepared at the baccalaureate-degree level, will have the knowledge and authority to delegate tasks to other healthcare personnel, as well as to supervise and evaluate these personnel. As healthcare providers who function autonomously and interdependently within the healthcare team, nurses are accountable for their professional practice and image, as well as for outcomes of their own and delegated nursing care. Nurses are members of healthcare teams, composed of professionals and other personnel that deliver treatment and services in complex, evolving healthcare systems. Nurses bring a unique blend of knowledge, judgment, skills, and caring to the healthcare team.

Baccalaureate generalist nurses are members of the profession and in this role are advocates for the patient and the profession. The use of the term "professional" implies the formation of a professional identity and accountability for one's professional image. As professionals, nurses are knowledge workers who use a well-delineated and broad knowledge base for practice. Professional nursing requires strong critical reasoning, clinical judgment, communication, and assessment skills. The professional nurse also requires the development and demonstration of an appropriate set of values and ethical framework for practice. As advocates for high quality care for all patients, nurses are knowledgeable and active in the policy processes defining healthcare delivery and systems of care. The generalist nurse also is committed to lifelong learning, including career planning, which increasingly will include graduate level study.

Preparation for the Baccalaureate Generalist Nurse Roles: Components of *The Essentials*

This section outlines the nine *Essentials of Baccalaureate Education for Professional Nursing Practice*. These *Essentials* are the curricular elements that provide the framework for baccalaureate nursing education. Each Essential is operationalized through the program's curriculum and is not intended to represent a course. Essential IX describes baccalaureate nursing practice and integrates the knowledge, skills, and attitudes from Essentials I-VIII. Each Essential includes a *rationale* explaining its relevance for the education of the professional nurse today and in the future. The rationale for each Essential is followed by outcomes that delineate the knowledge, skills, and attitudes expected of new baccalaureate generalist graduates. These outcomes serve as a guide to help faculty identify program and course objectives that are specific and measurable. Next, *sample content* is listed to aid faculty in selecting material suited to achieving the specific Essential. The list of content is not inclusive, nor is it intended as required. A vast selection of content is available for each Essential, and the specific baccalaureate program's curriculum will specify the content as appropriate to their mission, community served, and student population. The Essential outcomes can be obtained through a variety of content approaches, and potential content can and will evolve over time as new knowledge develops. The sample content is offered as a guide to programs or to further elucidate the nature of the Essential with which the content is listed.

The Essentials of Baccalaureate Education for Professional Nursing Practice

Essential I: Liberal Education for Baccalaureate Generalist Nursing Practice

Rationale

As defined by the Association of American Colleges and Universities (AAC&U), a liberal education is one that intentionally fosters, across multiple fields of study, wide-ranging knowledge of science, cultures, and society; high-level intellectual and practical skills; an active commitment to personal and social responsibility; and the demonstrated ability to apply learning to complex problems and challenges (AAC&U, 2007, p. 4). For the purposes of this document, a liberal education includes both the sciences and the arts. The sciences include:

- physical sciences (e.g., physics and chemistry),
- life sciences (e.g., biology and genetics),
- mathematical sciences, and
- social sciences (e.g., psychology and sociology).

The arts include:

- fine arts (e.g., painting and sculpture),
- performing arts (e.g., dance and music), and
- humanities (e.g., literature and theology).

Liberal education is critical to the generation of responsible citizens in a global society. In addition, liberal education is needed for the development of intellectual and innovative capacities for current and emergent generalist nursing practice. Liberally educated nurses work within a healthcare team to address issues important to the profession of nursing, question dominant assumptions, and solve complex problems related to individuals and population-based health care. Nursing graduates with a liberal education exercise appropriate clinical judgment, understand the reasoning behind policies and standards, and accept responsibility for continued development of self and the discipline of nursing.

A solid base in liberal education provides the distinguishing cornerstone for the study and practice of professional nursing. Studying the humanities, social sciences, and natural sciences expands the learner's capacity to engage in socially valued work and civic leadership in society. A strong foundation in liberal arts includes a general education curriculum that provides broad exposure to multiple disciplines and ways of knowing. Other than the nursing major, some aspects of liberal arts study will be provided as discrete parts of the full educational curriculum; however the rich and diverse perspectives and knowledge embedded in the liberal arts and sciences will be integrated throughout the nursing curriculum, as these perspectives are integral to the full spectrum of professional nursing practice (Hermann, 2004).

Successful integration of liberal education and nursing education provides graduates with knowledge of human cultures, including spiritual beliefs, and the physical and natural worlds supporting an inclusive approach to practice. The study of history, fine arts, literature, and languages are important building blocks for developing cultural competence and clinical reasoning. Furthermore, the integration of concepts from behavioral, biological, and natural sciences throughout the nursing curriculum promotes the understanding of self and others and contributes to safe, quality care. The integration of concepts from the arts and sciences provides the foundation for understanding health as well as disease processes, and forms the basis for clinical reasoning. As noted by the Carnegie Foundation for the Advancement of Teaching, the sciences are a critical aspect of liberal education for nurses. Sciences that have clinical relevance are especially important to the profession of nursing to ensure that graduates have the ability to keep pace with changes driven by research and new technologies (Carnegie Foundation, in press).

A liberal education for nurses forms the basis for intellectual and practical abilities for nursing practice as well as for engagement with the larger community, both locally and globally. Skills of inquiry, analysis, critical thinking, and communication in a variety of modes, including the written and spoken word, prepare baccalaureate graduates to involve others in the common good through use of information technologies, team work, and interprofessional problem solving. Liberal education, including the study of a second language, facilitates the development of an appreciation for cultural and ethnic diversity.

Strong emphasis on the development of a personal values system that includes the capacity to make and act upon ethical judgments is a hallmark of liberal education. Students educated in a liberal education environment are encouraged to pursue

meaningful personal and professional goals as well as to commit to honesty in relationships and the search for truth. The development of leadership skills and acceptance of responsibility to promote social justice are expected outcomes of a liberal education.

Liberal education allows the graduate to form the values and standards needed to address twenty-first century changes in technology, demographics, and economics. These trends include an aging population, diverse family and community structures, and increasing global interdependence, as well as economic and political changes in the United States healthcare system. Liberal education provides the baccalaureate graduate with the ability to integrate knowledge, skills, and values from the arts and sciences to provide humanistic, safe quality care; to act as advocates for individuals, families, groups, communities, and/or populations; and to promote social justice. Liberally educated graduates practice from a foundation of professional values and standards.

The baccalaureate program prepares the graduate to:

1. Integrate theories and concepts from liberal education into nursing practice.

2. Synthesize theories and concepts from liberal education to build an understanding of the human experience.

3. Use skills of inquiry, analysis, and information literacy to address practice issues.

4. Use written, verbal, non-verbal, and emerging technology methods to communicate effectively.

5. Apply knowledge of social and cultural factors to the care of diverse populations.

6. Engage in ethical reasoning and actions to provide leadership in promoting advocacy, collaboration, and social justice as a socially responsible citizen.

7. Integrate the knowledge and methods of a variety of disciplines to inform decision making.

8. Demonstrate tolerance for the ambiguity and unpredictability of the world and its effect on the healthcare system.

9. Value the ideal of lifelong learning to support excellence in nursing practice.

Sample Content

- selected concepts and ways of knowing from the sciences
- selected concepts and ways of knowing from the arts
- principles related to working with peoples from diverse cultures

- concepts related to intellectual diversity, tolerance, and social justice
- concepts related to globalization and migration of populations

Essential II: Basic Organizational and Systems Leadership for Quality Care and Patient Safety

Rationale

Organizational and systems leadership, quality improvement, and safety are critical to promoting high quality patient care. Leadership skills are needed that emphasize ethical and critical decision-making, initiating and maintaining effective working relationships, using mutually respectful communication and collaboration within interprofessional teams, care coordination, delegation, and developing conflict resolution strategies. Basic nursing leadership includes an awareness of complex systems, and the impact of power, politics, policy, and regulatory guidelines on these systems. To be effective, baccalaureate graduates must be able to practice at the microsystem level within an ever-changing healthcare system. This practice requires creativity and effective leadership and communication skills to work productively within interprofessional teams in various healthcare settings.

As a member of a healthcare team, baccalaureate graduates will understand and use quality improvement concepts, processes, and outcome measures. In addition, graduates will be able to assist or initiate basic quality and safety investigations; assist in the development of quality improvement action plans; and assist in monitoring the results of these action plans within the clinical microsystem, which is embedded within a larger system of care.

An important component of quality is safety. Safety in health care is defined as the minimization of "risk of harm to patients and providers through both system effectiveness and individual performance" (Cronenwett et al., 2007). Research has demonstrated that nurses more than any other healthcare professional are able to recognize, interrupt, evaluate, and correct healthcare errors (Rothschild et al., 2006) The baccalaureate graduate implements safety principles and works with others on the interprofessional healthcare team to create a safe, caring environment for care delivery.

Baccalaureate graduates will be skilled in working within organizational and community arenas and in the actual provision of care by themselves and/or supervising care provided by other licensed and non-licensed assistive personnel. They will be able to recognize safety and quality concerns and apply evidence-based knowledge from the nursing profession and other clinical sciences to their practice. Baccalaureate nursing graduates are distinguished by their abilities to identify, assess, and evaluate practice in care delivery models that are based in contemporary nursing science and are feasible within current cultural, economic, organizational, and political perspectives.

The baccalaureate program prepares the graduate to:

1. Apply leadership concepts, skills, and decision making in the provision of high quality nursing care, healthcare team coordination, and the oversight and accountability for care delivery in a variety of settings.

2. Demonstrate leadership and communication skills to effectively implement patient safety and quality improvement initiatives within the context of the interprofessional team.

3. Demonstrate an awareness of complex organizational systems.

4. Demonstrate a basic understanding of organizational structure, mission, vision, philosophy, and values.

5. Participate in quality and patient safety initiatives, recognizing that these are complex system issues, which involve individuals, families, groups, communities, populations, and other members of the healthcare team.

6. Apply concepts of quality and safety using structure, process, and outcome measures to identify clinical questions and describe the process of changing current practice.

7. Promote factors that create a culture of safety and caring.

8. Promote achievement of safe and quality outcomes of care for diverse populations.

9. Apply quality improvement processes to effectively implement patient safety initiatives and monitor performance measures, including nurse-sensitive indicators in the microsystem of care.

10. Use improvement methods, based on data from the outcomes of care processes, to design and test changes to continuously improve the quality and safety of health care.

11. Employ principles of quality improvement, healthcare policy, and cost-effectiveness to assist in the development and initiation of effective plans for the microsystem and/or system-wide practice improvements that will improve the quality of healthcare delivery.

12. Participate in the development and implementation of imaginative and creative strategies to enable systems to change.

Sample Content

- leadership, including theory, behaviors, characteristics, contemporary approaches, leadership development, and styles of leadership

- leadership skills and strategies (negotiating, collaborating, coordinating); decision making to promote quality patient care in a variety of healthcare settings
- change theory and complexity science
- community organizing models
- social change theories
- creative and imaginative strategies in problem solving
- communication, including elements, channels, levels, barriers, models, organizational communication, skill development, workplace communication, conflict resolution, optimizing patient care outcomes, and chain-of-command
- principles of interpersonal interactions/communication
- healthcare systems (structure and finance) and organizational structures and relationships (e.g., between finance, organizational structure, and delivery of care, particularly at the microsystem level, including mission/vision/philosophy and values)
- reliability and reliability sciences in health care
- operations research, queuing theory, and systems designs in health care
- teamwork skills, including effective teams/characteristics, application to patient care teams, team process, conflict resolution, delegation, supervision, and collaboration
- microsystems and their relationship to complex systems, quality care, and patient safety
- patient safety principles, including safety standards, organizational safety processes, reporting processes, departmental responsibilities, ownership, national initiatives, and financial implications
- quality improvement (QI), including history, elements, Continuous Quality Improvement (CQI) models, concepts, principles, benchmarking, processes, tools, departmental ownership, roles/responsibility, methodologies, regulatory requirements, organizational structures for QI, outcomes, monitoring, Quality Assurance (QA) vs. QI, beginning resource need assessment, and resource identification, acquisition, and evaluation
- overview of QI process techniques, including benchmarks, basic statistics, root cause analyses, and Failure Mode Effects Analysis (FMEA) in the quality improvement process
- principles of nursing care delivery management and evaluation

Essential III: Scholarship for Evidence-Based Practice

Rationale

Professional nursing practice is grounded in the translation of current evidence into practice. Scholarship for the baccalaureate graduate involves identification of practice issues; appraisal and integration of evidence; and evaluation of outcomes. As practitioners at the point of care, baccalaureate nurses are uniquely positioned to monitor patient outcomes and identify practice issues. Evidence-based practice models provide a

systematic process for the evaluation and application of scientific evidence surrounding practice issues (IOM, 2003b). Dissemination is a critical element of scholarly practice; baccalaureate graduates are prepared to share evidence of best practices with the interprofessional team.

Baccalaureate education provides a basic understanding of how evidence is developed, including the research process, clinical judgment, interprofessional perspectives, and patient preference as applied to practice. This basic understanding serves as a foundation for more complex applications at the graduate level (AACN, 2006a). Baccalaureate nurses integrate reliable evidence from multiple ways of knowing to inform practice and make clinical judgments. In collaboration with other healthcare team members, graduates participate in documenting and interpreting evidence for improving patient outcomes (AACN, 2006b).

In all healthcare settings, ethical and legal precepts guide research conduct to protect the rights of patients eligible for, or participating in, investigations. Professional nurses safeguard patient rights, including those of the most vulnerable patients, in situations where an actual or potential conflict of interest, misconduct, or the potential for harm are identified.

The baccalaureate program prepares the graduate to:

1. Explain the interrelationships among theory, practice, and research.

2. Demonstrate an understanding of the basic elements of the research process and models for applying evidence to clinical practice.

3. Advocate for the protection of human subjects in the conduct of research.

4. Evaluate the credibility of sources of information, including but not limited to databases and Internet resources.

5. Participate in the process of retrieval, appraisal, and synthesis of evidence in collaboration with other members of the healthcare team to improve patient outcomes.

6. Integrate evidence, clinical judgment, interprofessional perspectives, and patient preferences in planning, implementing, and evaluating outcomes of care.

7. Collaborate in the collection, documentation, and dissemination of evidence.

8. Acquire an understanding of the process for how nursing and related healthcare quality and safety measures are developed, validated, and endorsed.

9. Describe mechanisms to resolve identified practice discrepancies between identified standards and practice that may adversely impact patient outcomes.

Sample Content

- principles and models of evidence-based practice
- nurse-sensitive quality indicators (National Quality Forum, 2004), performance measures
- overview of qualitative and quantitative research processes
- methods for locating and appraising health and other relevant research literature and other sources of evidence
- basic applied statistics
- basic designs, corresponding questions, analytical methods related to research questions, and limits on implications of findings (e.g., causal vs. relational)
- ethical conduct of research and scholarly work
- linkages among practice, research evidence, patient outcomes, and cost containment
- forces driving research agendas
- locating and evaluating sources of evidence
- electronic database search strategies (e.g., CINAHL, PubMed)
- systematic application of information
- levels of evidence: textbooks, case studies, reviews of literature, research critiques, controlled trials, evidence-based clinical practice guidelines (www.guideline.gov), meta-analyses, and systematic reviews (e.g., the Cochrane Database of Systematic Reviews)
- differentiation of clinical opinion from research and evidence summaries
- scholarship dissemination methods: oral/visual presentations, publications, newsletters, etc.

Essential IV: Information Management and Application of Patient Care Technology

Rationale

Knowledge and skills in information and patient care technology are critical in preparing baccalaureate nursing graduates to deliver quality patient care in a variety of healthcare settings (IOM, 2003a). Graduates must have basic competence in technical skills, which includes the use of computers, as well as the application of patient care technologies such as monitors, data gathering devices, and other technological supports for patient care interventions. In addition, baccalaureate graduates must have competence in the use of information technology systems, including decision-support systems, to gather evidence to guide practice. Specific introductory level nursing informatics competencies include the ability to use selected applications in a comfortable and knowledgeable way.

Computer and information literacy are crucial to the future of nursing. Improvement of cost effectiveness and safety depend on evidence-based practice, outcomes research, interprofessional care coordination, and electronic health records, all of which involve information management and technology (McNeil et al., 2006). Therefore, graduates of

baccalaureate programs must have competence in using both patient care technologies and information management systems.

In addition, baccalaureate graduates ethically manage data, information, knowledge, and technology to communicate effectively; provide safe and effective patient care; and use research and clinical evidence to inform practice decisions. Graduates will be aware that new technology often requires new workflow patterns and changes in practice approaches to patient care prior to implementation.

The use and understanding of standardized terminologies are foundational to the development of effective clinical information systems (CIS). Integration of standardized terminologies into the CIS not only supports day-to-day nursing practice but also the capacity to enhance interprofessional communication and automatically generate standardized data to continuously evaluate and improve practice (American Nurses Association, 2008). Baccalaureate graduates are prepared to gather and document care data that serve as a foundation for decision making for the healthcare team.

Course work and clinical experiences will provide the baccalaureate graduate with knowledge and skills to use information management and patient care technologies to deliver safe and effective care. Graduates will have exposure to information systems that provide data about quality improvement and required regulatory reporting through information systems. Course work and clinical experiences will expose graduates to a range of technologies that facilitate clinical care, including patient monitoring systems, medication administration systems, and other technologies to support patient care.

Integral to these basic skills is an attitude of openness to innovation and continual learning, as information systems and patient care technologies are constantly changing.

The baccalaureate program prepares the graduate to:

1. Demonstrate skills in using patient care technologies, information systems, and communication devices that support safe nursing practice.

2. Use telecommunication technologies to assist in effective communication in a variety of healthcare settings.

3. Apply safeguards and decision making support tools embedded in patient care technologies and information systems to support a safe practice environment for both patients and healthcare workers.

4. Understand the use of CIS systems to document interventions related to achieving nurse sensitive outcomes.

5. Use standardized terminology in a care environment that reflects nursing's unique contribution to patient outcomes.

6. Evaluate data from all relevant sources, including technology, to inform the delivery of care.

7. Recognize the role of information technology in improving patient care outcomes and creating a safe care environment.

8. Uphold ethical standards related to data security, regulatory requirements, confidentiality, and clients' right to privacy.

9. Apply patient-care technologies as appropriate to address the needs of a diverse patient population.

10. Advocate for the use of new patient care technologies for safe, quality care.

11. Recognize that redesign of workflow and care processes should precede implementation of care technology to facilitate nursing practice.

12. Participate in evaluation of information systems in practice settings through policy and procedure development.

Sample Content

- use of patient care technologies (e.g., monitors, pumps, computer-assisted devices)
- use of technology and information systems for clinical decision-making
- computer skills that may include basic software, spreadsheet, and healthcare databases
- information management for patient safety
- regulatory requirements through electronic data monitoring systems
- ethical and legal issues related to the use of information technology, including copyright, privacy, and confidentiality issues
- retrieval information systems, including access, evaluation of data, and application of relevant data to patient care
- online literature searches
- technological resources for evidence-based practice
- web-based learning and online literature searches for self and patient use
- technology and information systems safeguards (e.g., patient monitoring, equipment, patient identification systems, drug alerts and IV systems, and barcoding)
- interstate practice regulations (e.g., licensure, telehealth)
- technology for virtual care delivery and monitoring
- principles related to nursing workload measurement/resources and information systems
- information literacy
- electronic health record/physician order entry

- decision-support tools
- role of the nurse informaticist in the context of health informatics and information systems

Essential V: Healthcare Policy, Finance, and Regulatory Environments

Rationale

Healthcare policies, including financial and regulatory policies, directly and indirectly influence nursing practice as well as the nature and functioning of the healthcare system. These policies shape responses to organizational, local, national, and global issues of equity, access, affordability, and social justice in health care. Healthcare policies also are central to any discussion about quality and safety in the practice environment.

The baccalaureate-educated graduate will have a solid understanding of the broader context of health care, including how patient care services are organized and financed, and how reimbursement is structured. Regulatory agencies define boundaries of nursing practice, and graduates need to understand the scope and role of these agencies. Baccalaureate graduates also will understand how healthcare issues are identified, how healthcare policy is both developed and changed, and how that process can be influenced through the efforts of nurses, and other healthcare professionals, as well as lay and special advocacy groups.

Healthcare policy shapes the nature, quality, and safety of the practice environment and all professional nurses have the responsibility to participate in the political process and advocate for patients, families, communities, the nursing profession, and changes in the healthcare system as needed. Advocacy for vulnerable populations with the goal of promoting social justice is recognized as moral and ethical responsibilities of the nurse.

The baccalaureate program prepares the graduate to:

1. Demonstrate basic knowledge of healthcare policy, finance, and regulatory environments, including local, state, national, and global healthcare trends.

2. Describe how health care is organized and financed, including the implications of business principles, such as patient and system cost factors.

3. Compare the benefits and limitations of the major forms of reimbursement on the delivery of health care services.

4. Examine legislative and regulatory processes relevant to the provision of health care.

5. Describe state and national statutes, rules, and regulations that authorize and define professional nursing practice.

6. Explore the impact of socio-cultural, economic, legal, and political factors influencing healthcare delivery and practice.

7. Examine the roles and responsibilities of the regulatory agencies and their effect on patient care quality, workplace safety, and the scope of nursing and other health professionals' practice.

8. Discuss the implications of healthcare policy on issues of access, equity, affordability, and social justice in healthcare delivery.

9. Use an ethical framework to evaluate the impact of social policies on health care, especially for vulnerable populations.

10. Articulate, through a nursing perspective, issues concerning healthcare delivery to decision makers within healthcare organizations and other policy arenas.

11. Participate as a nursing professional in political processes and grassroots legislative efforts to influence healthcare policy.

12. Advocate for consumers and the nursing profession.

Sample Content

- policy development and the legislative process
- policy development and the regulatory process
- licensure and regulation of nursing practice
- social policy/public policy
- policy analysis and evaluation
- healthcare financing and reimbursement
- economics of health care
- consumerism and advocacy
- political activism and professional organizations
- disparities in the healthcare system
- impact of social trends such as genetics and genomics, childhood obesity, and aging on health policy
- role of nurse as patient advocate
- ethical and legal issues
- professional organizations' role in healthcare policy, finance and regulatory environments
- scope of practice and policy perspectives of other health professionals
- negligence, malpractice, and risk management
- Nurse Practice Act

Essential VI: Interprofessional Communication and Collaboration for Improving Patient Health Outcomes

Rationale

Effective communication and collaboration among health professionals is imperative to providing patient-centered care. All health professions are challenged to educate future clinicians to deliver patient-centered care as members of an interprofessional team, emphasizing communication, evidence-based practice, quality improvement approaches, and informatics (IOM, 2003a). Interprofessional education is defined as interactive educational activities involving two or more professions that foster collaboration to improve patient care (Freeth, Hammick, Koppel, & Reeves, 2002). Teamwork among healthcare professionals is associated with delivering high quality and safe patient care (Barnsteiner, Disch, Hall, Mayer, & Moore, 2007). Collaboration is based on the complementarities of roles and the understanding of these roles by the members of the healthcare teams.

Interprofessional education enables the baccalaureate graduate to enter the workplace with baseline competencies and confidence for interactions and with communication skills that will improve practice, thus yielding better patient outcomes. Interprofessional education can occur in a variety of settings. An essential component for the establishment of collegial relationships is recognition of the unique discipline-specific practice spheres. Fundamental to effective interprofessional and intra-professional collaboration is a definition of shared goals; clear role expectations of members; a flexible decision-making process; and the establishment of open communication patterns and leadership. Thus, interprofessional education optimizes opportunities for the development of respect and trust for other members of the healthcare team.

The baccalaureate program prepares the graduate to:

1. Compare/contrast the roles and perspectives of the nursing profession with other care professionals on the healthcare team (i.e., scope of discipline, education and licensure requirements).

2. Use inter- and intraprofessional communication and collaborative skills to deliver evidence-based, patient-centered care.

3. Incorporate effective communication techniques, including negotiation and conflict resolution to produce positive professional working relationships.

4. Contribute the unique nursing perspective to interprofessional teams to optimize patient outcomes.

5. Demonstrate appropriate teambuilding and collaborative strategies when working with interprofessional teams.

6. Advocate for high quality and safe patient care as a member of the interprofessional team.

Sample Content

- interprofessional and intraprofessional communication, collaboration, and socialization, with consideration of principles related to communication with diverse cultures
- teamwork/concepts of teambuilding/cooperative learning
- professional roles, knowledge translation, role boundaries, and diverse disciplinary perspectives
- relationship building
- navigating complex systems, system facilitation
- interdependence and resource sharing of healthcare professions
- individual accountability/shared accountability
- advocacy
- ethical codes and core values of different healthcare professions
- autonomy
- safety
- scopes of practice
- conflict management, conflict resolution strategies, and negotiation
- group dynamics
- principles of referral process for specialized services
- participatory decision-making
- caring

Essential VII: Clinical Prevention and Population Health

Rationale

Health promotion, disease, and injury prevention across the lifespan are essential elements of baccalaureate nursing practice at the individual and population levels. These concepts are necessary to improve population health. Epidemiologic studies show that lifestyle, environmental, and genetic factors are major determinants of population health in areas of health, illness, disease, disability, and mortality (U.S. Department of Health and Human Services, 2000a). Thus, acute care and disease-based episodic interventions alone are inadequate for improving health (Allan et al., 2004; Allan, Stanley, Crabtree, Werner, & Swenson, 2005). Health promotion along with disease and injury prevention are important throughout the lifespan and include assisting individuals, families, groups, communities, and populations to prepare for and minimize health consequences of emergencies, including mass casualty disasters.

Clinical prevention refers to individually focused interventions such as immunizations, screenings, and counseling aimed at preventing escalation of diseases and conditions. (Allan, Stanley, Crabtree, Werner, & Swenson, 2005) Because these interventions are relevant across the lifespan, nurses need knowledge about growth and development as well as evidence-based clinical prevention practices. Nurses collaborate with other healthcare professionals and patients for improving health through clinical prevention.

In population-focused nursing, the aggregate, community, or population is the unit of care. Emphasis is placed on health promotion and disease prevention. Because population-focused care is fundamental to nursing practice, and because a baccalaureate degree in nursing is the recommended minimal educational credential for population-focused care, baccalaureate programs prepare graduates for population health as well as clinical prevention (AACN, 1998; American Public Health Association, 1996; Quad Council of Public Health Nursing Organizations, 2004). Population-focused nursing involves identifying determinants of health, prioritizing primary prevention when possible, actively identifying and reaching out to those who might benefit from a service, and using available resources to assure best overall improvement in the health of the population (American Nurses Association, 2007). For instance, population-focused interventions involve reaching an appropriate level of herd immunity in the community and ensuring that information about appropriate screenings reach the entire population, not just those who choose to come to healthcare facilities. Collaboration with other healthcare professionals and populations is necessary to promote conditions and healthy behaviors that improve population health.

The baccalaureate program prepares the graduate to:

1. Assess protective and predictive factors, including genetics, which influence the health of individuals, families, groups, communities, and populations.

2. Conduct a health history, including environmental exposure and a family history that recognizes genetic risks, to identify current and future health problems.

3. Assess health/illness beliefs, values, attitudes, and practices of individuals, families, groups, communities, and populations.

4. Use behavioral change techniques to promote health and manage illness.

5. Use evidence-based practices to guide health teaching, health counseling, screening, outreach, disease and outbreak investigation, referral, and follow-up throughout the lifespan.

6. Use information and communication technologies in preventive care.

7. Collaborate with other healthcare professionals and patients to provide spiritually and culturally appropriate health promotion and disease and injury prevention interventions.

8. Assess the health, healthcare, and emergency preparedness needs of a defined population.

9. Use clinical judgment and decision-making skills in appropriate, timely nursing care during disaster, mass casualty, and other emergency situations.

10. Collaborate with others to develop an intervention plan that takes into account determinants of health, available resources, and the range of activities that contribute to health and the prevention of illness, injury, disability, and premature death.

11. Participate in clinical prevention and population-focused interventions with attention to effectiveness, efficiency, cost-effectiveness, and equity.

12. Advocate for social justice, including a commitment to the health of vulnerable populations and the elimination of health disparities.

13. Use evaluation results to influence the delivery of care, deployment of resources, and to provide input into the development of policies to promote health and prevent disease.

Sample Content

- prevention and harm reduction
- ecological model as framework for understanding determinants of health
- public health principles
- fundamentals of epidemiology and biostatistics (distribution, incidence, prevalence, rates, risk factors, health status indicators, and control of disease in populations)
- public health core functions
- systems theory
- ethical, legal, and economic principles related to clinical prevention and population health
- cultural, psychological, and spiritual implications of clinical prevention and population health
- environmental health risks
- health literacy
- health behavior change theories
- theoretical foundations and principles of individual and population-focused education and counseling
- genetics and genomics
- nutrition
- global health
- occupational health, including ergonomics

- evidence-based clinical prevention practices
- complementary and alternative therapies
- population assessment
- individual and population-focused interventions (e.g. weight control, nicotine management, social marketing, policy development)
- health surveillance
- health disparities and vulnerable populations
- screening
- immunization
- pharmaceutical preventive strategies
- communicating and sharing health information with the public
- risk communication
- emergency preparedness and disaster response including self protection
- using technology in population focused care and clinical prevention
- outcome measurement
- pedigree from a three-generation family health history using standardized symbols and terminology

Essential VIII: Professionalism and Professional Values

Rationale

Professional values and their associated behaviors are foundational to the practice of nursing. Inherent in professional practice is an understanding of the historical, legal, and contemporary context of nursing practice. Professionalism is defined as the consistent demonstration of core values evidenced by nurses working with other professionals to achieve optimal health and wellness outcomes in patients, families, and communities by wisely applying principles of altruism, excellence, caring, ethics, respect, communication, and accountability (Interprofessional Professionalism Measurement Group, 2008). Professionalism also involves accountability for one's self and nursing practice, including continuous professional engagement and lifelong learning. As discussed in the American Nurses Association Code of Ethics for Nursing (2005, p.16), "The nurse is responsible for individual nursing practice and determines the appropriate delegation of tasks consistent with the nurse's obligation to provide optimum patient care." Also, inherent in accountability is responsibility for individual actions and behaviors, including civility. In order to demonstrate professionalism, civility must be present. Civility is a fundamental set of accepted behaviors for a society/culture upon which professional behaviors are based (Hammer, 2003).

Professional nursing has enjoyed a long tradition of high respect from the public (Gallup Poll, 2006). A primary reason for this recognition is the caring and compassion of the nurse. Caring is a concept central to professional nursing practice. Caring as related to this Essential encompasses the nurse's empathy for, connection to, and being with the patient, as well as the ability to translate these affective characteristics into compassionate, sensitive, and patient-centered care. Historically, nurses have provided

care for patients within a context of privileged intimacy; a space into which a nurse is allowed and in partnership with the patient creates a unique, healing relationship. Through this connection, the nurse and patient work toward an understanding of a wide variety of physical, psychosocial, cultural, and spiritual needs, health-illness decisions, and life challenges. Professional nursing requires a balance between evidence-based knowledge, skills, and attitudes and professional confidence, maturity, caring, and compassion. In this global society, patient populations are increasingly diverse. Therefore, essential to the care of diverse populations is the need for evidence-based knowledge and sensitivity to variables such as age, gender, culture, health disparities, socioeconomic status, race, and spirituality. Baccalaureate graduates are prepared to care for at-risk patients, including the very young and the frail elderly, and to assist patients with decision-making about end-of-life concerns within the context of the patient's value system. In addition, nurses are prepared to work with patients across the lifespan who require genetic technologies and treatments.

Baccalaureate education includes the development of professional values and value-based behavior. Understanding the values that patients and other health professionals bring to the therapeutic relationship is critically important to providing quality patient care. Baccalaureate graduates are prepared for the numerous dilemmas that will arise in practice and are able to make and assist others in making decisions within a professional ethical framework. Ethics is an integral part of nursing practice and has always involved respect and advocacy for the rights and needs of patients regardless of setting. Honesty and acting ethically are two key elements of professional behavior, which have a major impact on patient safety. A blame-free culture of accountability and an environment of safety are important for encouraging team members to report errors. Such an environment enhances the safety of all patients.

The following professional values epitomize the caring, professional nurse. Nurses, guided by these values, demonstrate ethical behavior in patient care.

Altruism is a concern for the welfare and well being of others. In professional practice, altruism is reflected by the nurse's concern and advocacy for the welfare of patients, other nurses, and other healthcare providers.

Autonomy is the right to self-determination. Professional practice reflects autonomy when the nurse respects patients' rights to make decisions about their health care.

Human Dignity is respect for the inherent worth and uniqueness of individuals and populations. In professional practice, concern for human dignity is reflected when the nurse values and respects all patients and colleagues.

Integrity is acting in accordance with an appropriate code of ethics and accepted standards of practice. Integrity is reflected in professional practice when the nurse is honest and provides care based on an ethical framework that is accepted within the profession.

Social Justice is acting in accordance with fair treatment regardless of economic status, race, ethnicity, age, citizenship, disability, or sexual orientation.

The baccalaureate program prepares the graduate to:

1. Demonstrate the professional standards of moral, ethical, and legal conduct.

2. Assume accountability for personal and professional behaviors.

3. Promote the image of nursing by modeling the values and articulating the knowledge, skills, and attitudes of the nursing profession.

4. Demonstrate professionalism, including attention to appearance, demeanor, respect for self and others, and attention to professional boundaries with patients and families as well as among caregivers.

5. Demonstrate an appreciation of the history of and contemporary issues in nursing and their impact on current nursing practice.

6. Reflect on one's own beliefs and values as they relate to professional practice.

7. Identify personal, professional, and environmental risks that impact personal and professional choices and behaviors.

8. Communicate to the healthcare team one's personal bias on difficult healthcare decisions that impact one's ability to provide care.

9. Recognize the impact of attitudes, values, and expectations on the care of the very young, frail older adults, and other vulnerable populations.

10. Protect patient privacy and confidentiality of patient records and other privileged communications.

11. Access interprofessional and intraprofessional resources to resolve ethical and other practice dilemmas.

12. Act to prevent unsafe, illegal, or unethical care practices.

13. Articulate the value of pursuing practice excellence, lifelong learning, and professional engagement to foster professional growth and development.

14. Recognize the relationship between personal health, self renewal, and the ability to deliver sustained quality care.

Sample Content

- Nurse Practice Acts and scope of practice
- professional codes of conduct and professional standards (e.g., ANA, *Code of Ethics for Nurses with Interpretive Statements*, 2005; International Council of Nursing, *Code of Ethics for Nurses*, 2006, and AACN's *Hallmarks of the Professional Nursing Practice Environment, 2002)*
- ethical and legal frameworks and social implications
- communication
- interprofessional teams and team building concepts
- cultural humility and spiritual awareness
- health disparities
- history of nursing
- contemporary nursing issues
- problem solving methods such as appreciative inquiry
- professional accountability
- stereotypes and biases, such as gender, race, and age discrimination
- nurse self care/stress management strategies
- human rights
- informed consent
- professional identity formation
- privacy, confidentiality
- moral agency
- professional image
- self reflection, personal knowing, personal self-care plan
- professional organizations, particularly nursing and healthcare organizations

Essential IX: Baccalaureate Generalist Nursing Practice

Rationale

Essential IX describes generalist nursing practice at the completion of baccalaureate nursing education. This Essential includes practice-focused outcomes that integrate the knowledge, skills, and attitudes delineated in Essentials I - VIII into the nursing care of individuals, families, groups, communities, and populations in a variety of settings. Because professional nurses are the human link between the patient and the complex healthcare environment, they must provide compassionate care informed by a scientific base of knowledge, including current evidence from nursing research. Essential IX recognizes that the integration of knowledge and skills is critical to practice. Practice occurs across the lifespan and in the continuum of healthcare environments. The baccalaureate graduate demonstrates clinical reasoning within the context of patient-centered care to form the basis for nursing practice that reflects ethical values.

Knowledge acquisition related to wellness, health promotion, illness, disease management and care of the dying is core to nursing practice. In addition, acquisition of communication and psychomotor skills is critical to providing nursing care. Skill development will focus on the mastery of core scientific principles that underlie all skills, thus preparing the baccalaureate graduate to incorporate current and future technical skills into other nursing responsibilities and apply skills in diverse contexts of healthcare delivery. Direct care may be delivered in person or virtually and that care is based on a shared understanding with the patient and the healthcare team. This base of knowledge and skills prepares the graduate for practice as a member and leader of the interprofessional healthcare team.

Baccalaureate-educated nurses will be prepared to care for patients across the lifespan, from the very young to the older adult. Special attention will be paid to changing demographics. Among these demographics are the increased prevalence of chronic illnesses and co-morbidities among all ages, including those related to mental disorders, specifically depression. However, there is clear evidence that the largest group seeking and receiving healthcare services is the older adult population. The graduate will understand and respect the variations of care, the increased complexity, and the increased use of healthcare resources inherent in caring for patients who are vulnerable due to age, the very young and very old, as well as disabilities and chronic disease.

The increasing diversity of this nation's population mandates an attention to diversity in order to provide safe, humanistic high quality care. This includes cultural, spiritual, ethnic, gender, and sexual orientation diversity. In addition, the increasing globalization of healthcare requires that professional nurses be prepared to practice in a multicultural environment and possess the skills needed to provide culturally competent care.

Baccalaureate graduates will have knowledge, skills, and attitudes that prepare them for a long-term career in a changing practice environment. The increased prevalence of chronic illness is a result of an increasingly older adult population, environmental threats, lifestyles that increase risk of disease, and enhanced technological and therapeutic interventions that prolong life. In addition to primary prevention, the professional nurse provides support for management of chronic illness, health education, and patient-centered care in partnership with the patient and the interprofessional team. Patients and their families often are knowledgeable about health care; therefore, the graduate will be able to communicate with these consumers and appreciate the importance of the care partnership.

Graduates translate, integrate, and apply knowledge that leads to improvements in patient outcomes. Knowledge is increasingly complex and evolving rapidly. For example, genetics and genomics are areas where knowledge is escalating and the graduate will be cognizant of customized therapies designed to improve care outcomes. Therefore, baccalaureate graduates will be expected to focus on continuous self-evaluation and lifelong learning.

The baccalaureate program prepares the graduate to:

1. Conduct comprehensive and focused physical, behavioral, psychological, spiritual, socioeconomic, and environmental assessments of health and illness parameters in patients, using developmentally and culturally appropriate approaches.

2. Recognize the relationship of genetics and genomics to health, prevention, screening, diagnostics, prognostics, selection of treatment, and monitoring of treatment effectiveness, using a constructed pedigree from collected family history information as well as standardized symbols and terminology.

3. Implement holistic, patient-centered care that reflects an understanding of human growth and development, pathophysiology, pharmacology, medical management, and nursing management across the health-illness continuum, across the lifespan, and in all healthcare settings.

4. Communicate effectively with all members of the healthcare team, including the patient and the patient's support network.

5. Deliver compassionate, patient-centered, evidence-based care that respects patient and family preferences.

6. Implement patient and family care around resolution of end-of-life and palliative care issues, such as symptom management, support of rituals, and respect for patient and family preferences.

7. Provide appropriate patient teaching that reflects developmental stage, age, culture, spirituality, patient preferences, and health literacy considerations to foster patient engagement in their care.

8. Implement evidence-based nursing interventions as appropriate for managing the acute and chronic care of patients and promoting health across the lifespan.

9. Monitor client outcomes to evaluate the effectiveness of psychobiological interventions.

10. Facilitate patient-centered transitions of care, including discharge planning and ensuring the caregiver's knowledge of care requirements to promote safe care.

11. Provide nursing care based on evidence that contributes to safe and high quality patient outcomes within healthcare microsystems.

12. Create a safe care environment that results in high quality patient outcomes.

13. Revise the plan of care based on an ongoing evaluation of patient outcomes.

14. Demonstrate clinical judgment and accountability for patient outcomes when delegating to and supervising other members of the healthcare team.

15. Manage care to maximize health, independence, and quality of life for a group of individuals that approximates a beginning practitioner's workload

16. Demonstrate the application of psychomotor skills for the efficient, safe, and compassionate delivery of patient care.

17. Develop a beginning understanding of complementary and alternative modalities and their role in health care.

18. Develop an awareness of patients as well as healthcare professionals' spiritual beliefs and values and how those beliefs and values impact health care.

19. Manage the interaction of multiple functional problems affecting patients across the lifespan, including common geriatric syndromes.

20. Understand one's role and participation in emergency preparedness and disaster response with an awareness of environmental factors and the risks they pose to self and patients.

21. Engage in caring and healing techniques that promote a therapeutic nurse-patient relationship.

22. Demonstrate tolerance for the ambiguity and unpredictability of the world and its effect on the healthcare system as related to nursing practice.

Sample Content

- theories of human growth and development
- principles of basic nursing care (e.g., skin, mobility, pain management, immediate patient care environment, etc.)
- patient and family-centered care
- management of acute and chronic physical and psychosocial conditions across the lifespan
- integration of pathophysiology into care
- care across the lifespan focusing on changing demographics with an emphasis on care of older adults and the very young.
- palliative and end-of-life care
- common geriatric syndromes
- genetics and genomics

- nutrition
- emergency preparedness and disaster response
- bioterrorism
- infection control issues, such as drug resistant organisms and management
- caring and healing techniques
- psychobiological interventions
- milieu therapy
- depression screening
- health promotion
- patient advocacy
- disparities
- complementary and alternative therapies
- spiritual care
- therapeutic communication
- culturally diverse care
- evidence-based practice
- pharmacology/pharmacogenetics
- nursing care management
- prioritization of patient care needs
- principles of delegating and monitoring care
- leadership
- information management systems
- integrating technology into practice
- resource management
- teaching/learning principles

Expectations for Clinical Experiences within the Baccalaureate Program

Baccalaureate programs provide rich and varied opportunities for practice experiences designed to assist graduates to achieve the *Baccalaureate Essentials* upon completion of their program. Clinical experiences are essential for baccalaureate nursing programs to prepare students to care for a variety of patients across the lifespan and across the continuum of care. In addition clinical experiences assist the graduate to:

- develop proficiency in performing psychomotor skills;
- apply professional communication strategies to client and interprofessional interactions; and
- acquire a professional identity.

Clinical learning is focused on developing and refining the knowledge and skills necessary to manage care as part of an interprofessional team. Theoretical learning becomes reality as students are coached to make connections between the standard case or situation that is presented in the classroom or laboratory setting and the constantly shifting reality of actual patient care. Clinical educators for baccalaureate programs are well informed about the specific learning that is taking place in the classroom and

laboratory setting and find clinical education opportunities to reinforce and apply that learning. Programs provide clinical placements across the range of practice settings and across the continuum of care that are safe, supportive, and conducive for groups of students to practice and learn professional roles. Clinical practice opportunities expose students to practice issues such as technological innovations, accelerated care transitions, an unpredictable fast-paced environment, and complex system issues, which are all important in preparing the students for practice following graduation. In addition, clinical practice opportunities provide students with experiences and nursing role models that prepare them for practice in complex, changing healthcare environments.

Simulation experiences augment clinical learning and are complementary to direct care opportunities essential to assuming the role of the professional nurse. Laboratory and simulation experiences provide an effective, safe environment for learning and applying the cognitive and performance skills needed for practice. Reality-based, simulated patient care experiences increase self-confidence in communication and psychomotor skills, and professional role development. Beginning research supports the use of simulation in nursing education. Nehring, Ellis, and Lashley (2001) describe the use of human patient simulators in nursing education as an excellent tool to measure competency in the application of knowledge and technical skills. Debriefing, or feedback to the students, is as essential for simulation as it is for instruction in the clinical setting (National Council of State Boards of Nursing, 2005). Simulation is a valuable element of clinical preparation. However, patient care experiences with actual patients form the most important component of clinical education. Over time, as evidence emerges regarding the use of simulation as a substitute for actual patient experience, the balance between actual and simulated patient care may change.

Direct patient care clinical experiences provide valuable opportunities for student learning not found in other experiences. Early learning experiences, including providing care for a limited number of patients, allow students to explore the challenging world of clinical practice. As students become more experienced, increasingly complex clinical learning opportunities are selected to provide a sufficient breadth and depth of learning to develop the competence necessary for entry-level practice with diverse patients across the life span in various types of settings. Through an immersion experience, students have the opportunity to develop increasing autonomy and assume an assignment that more closely approximates a realistic workload of a novice nurse in that environment.

A clinical immersion experience provides opportunities for building clinical reasoning, management, and evaluation skills. These opportunities increase the student's self-confidence, professional image, and sense of belonging that facilitate the transition to competent and confident practice. Immersion experiences allow students to integrate previous learning and more fully develop the roles of the baccalaureate generalist nurse:

- provider of care
    - evaluate client changes and progress over time
    - develop a beginning proficiency and efficiency in delivering safe care
- designer/manager/coordinator of care
    - manage care transitions

- be an active participant on the interprofessional team
- identify system issues
- develop working skills in delegation, prioritization, and oversight of care

- member of a profession
  - evaluate one's own practice
  - assume responsibility for supporting the profession

An immersion experience provides faculty opportunities to observe student performance over time and more effectively evaluate the student's professional development.

Graduates of all types of baccalaureate programs need sufficient didactic, laboratory, and clinical experiences to attain the end-of-program outcomes of these *Essentials.* The nursing program determines and assesses clinical sites to ensure the clinical experiences for students provide:

- patients from diverse backgrounds, cultures, and of differing gender, religious, and spiritual practices;
- the continuum of care, including population-focused care;
- all age groups, including the very young and the frail elderly; and
- comprehensive learning opportunities to promote integration of baccalaureate learning outcomes that prepare the graduate for professional nursing practice.

Summary

The Essentials for Baccalaureate Education for Professional Nursing Practice serves to transform baccalaureate nursing education and are a dramatic revision of the 1998 version. Further, these *Essentials* meet the IOM's recommendations for core knowledge needed for all healthcare professionals (IOM, 2003b). Due to the ever-changing and complex healthcare environment, this document emphasizes such concepts as patient-centered care, interprofessional teams, evidence-based practice, quality improvement, patient safety, informatics, clinical reasoning/critical thinking, genetics and genomics, cultural sensitivity, professionalism, practice across the lifespan, and end-of-life care.

Essentials I-IX delineate the outcomes expected for baccalaureate nursing program graduates. Achievement of these outcomes will enable the baccalaureate-prepared generalist nurse to practice within complex healthcare systems and assume the roles:

- provider of care
  - evaluate client changes and progress over time
  - develop a beginning proficiency and efficiency in delivering safe care
- designer/manager/coordinator of care
  - manage care transitions
  - be an active participant on the interprofessional team
  - identify system issues
  - develop working skills in delegation, prioritization, and oversight of care
- member of a profession
  - evaluate one's own practice
  - assume responsibility for supporting the profession

Essential IX describes generalist nursing practice at the completion of baccalaureate nursing education. This Essential includes practice-focused outcomes that integrate the knowledge, skills, and attitudes delineated in Essentials I – VIII. The time needed to accomplish each Essential will vary, and each Essential does not require a separate course for achievement of the outcomes. Learning opportunities, including clinical experiences, must be sufficient in breadth and depth to ensure the graduate attains these practice-focused outcomes and integrates this knowledge and these skills into one's professional nursing practice.

Baccalaureate graduates translate, integrate, and apply knowledge that leads to improvements in patient outcomes. Knowledge is increasingly complex and evolving rapidly. Therefore, baccalaureate graduates are expected to focus on continuous self-evaluation and lifelong learning.

Glossary

Critical Thinking: All or part of the process of questioning, analysis, synthesis, interpretation, inference, inductive and deductive reasoning, intuition, application, and creativity (AACN, 1998). Critical thinking underlies independent and interdependent decision making.

Clinical Judgment: The outcomes of critical thinking in nursing practice. Clinical judgments begin with an end in mind. Judgments are about evidence, meaning and outcomes achieved (Pesut, 2001).

Clinical Reasoning: The process used to assimilate information, analyze data, and make decisions regarding patient care (Simmons, Lanuza, Fonteyn, & Hicks, 2003).

Clinical Prevention: Individually focused interventions such as immunizations, screenings, and counseling, aimed at preventing escalation of diseases and conditions.

Cultural Humility: Incorporates a lifelong commitment to self-evaluation and self-critique, to redressing the power imbalances in the patient-clinician dynamic, and to developing mutually beneficial and advocacy partnerships with communities on behalf of individuals and defined populations. Cultural humility is proposed as a more suitable goal than cultural competence in healthcare education (Tervalon & Murray-Garcia, 1998).

Cultural Sensitivity: Cultural sensitivity is experienced when neutral language, both verbal and not verbal, is used in a way that reflects sensitivity and appreciation for the diversity of another. Cultural sensitivity may be conveyed through words, phrases, and categorizations that are intentionally avoided, especially when referring to any individual who may be interpreted as impolite or offensive (American Academy of Nursing Expert Panel on Cultural Competence, 2007).

Decision-Support System (Clinical): Interactive computer programs designed to assist clinicians with decision making tasks. Clinical decision-support systems link health observations with health knowledge to influence choices by clinicians for improved health care.

Diversity: The range of human variation, including age, race, gender, disability, ethnicity, nationality, religious and spiritual beliefs, sexual orientation, political beliefs, economic status, native language, and geographical background.

Evidence-based Practice: Care that integrates the best research with clinical expertise and patient values for optimum care (IOM, 2003b).

Health Determinants: Complex interrelationships of factors, such as the social and economic environment, the physical environment, individual characteristics, and behaviors that influence health.

Health Literacy: The degree to which individuals have the capacity to obtain, process, and understand basic health information and services needed to make appropriate health decisions (U.S. Department of Health and Human Services, 2000b)

Healthcare Team: The patient plus all of the healthcare professionals who care for the patient. The patient is an integral member of the healthcare team.

Herd Immunity: Immunity of a sufficient proportion of the population to reduce the probability of infection of susceptible members of that population.

Immersion Experience: Clinical experiences with a substantive number of hours in a consistent clinical setting over a concentrated period of time.

Information Technology: The study, design, development implementation, support, or management of computer-based information systems, particularly software applications and computer hardware.

Integrative Strategies for Learning: Coherent organization of educational practices that integrate general education concepts throughout the major, through the widespread use of powerful, active, and collaborative instructional methods (Association of American Colleges and Universities, 2004) .

Interprofessional: Working across healthcare professions to cooperate, collaborate, communicate, and integrate care in teams to ensure that care is continuous and reliable. The team consists of the patient, the nurse, and other healthcare providers as appropriate (IOM, 2003b).

Intraprofessional: Working with healthcare team members within the profession to ensure that care is continuous and reliable.

Microsystem: The structural unit responsible for delivering care to specific patient populations or the frontline places where patients, families, and care teams meet (Nelson, Batalden, Godfrey, 2007).

Moral Agency: A person's capacity for making ethical judgments. Most philosophers suggest that only rational beings, people who can reason and form self-interested judgments, are capable of being moral agents.

Multi-dimensional Care: Relating to or having several dimensions; it speaks to the fullness of the patient-clinician experience, but also to people's lives in general. Spirituality is one of those many dimensions.

Nurse Sensitive Indicators: Measures of processes and outcomes—and structural proxies for these processes and outcomes (e.g., skill mix, nurse staffing hours)—that are affected, provided, and influenced by nursing personnel, but for which nursing is not exclusively responsible (National Quality Forum, 2003).

Outcome: Broad performance indicator, related to the knowledge, skills, and attitudes, needed by a baccalaureate graduate.

Patient: The recipient of nursing care or services. This term was selected for consistency and in recognition and support of the historically established tradition of the nurse-patient relationship. Patients may be individuals, families, groups, communities, or populations. Further, patients may function in independent, interdependent, or dependent roles, and may seek or receive nursing interventions related to disease prevention, health promotion, or health maintenance, as well as illness and end-of-life care. Depending on the context or setting, patients may, at times, more appropriately be termed clients, *consumers,* or *customers* of nursing services (AACN, 1998, p. 2).

Patient-centered Care: Includes actions to identify, respect and care about patients' differences, values, preferences, and expressed needs; relieve pain and suffering; coordinate continuous care; listen to, clearly inform, communicate with, and educate patients; share decision making and management; and continuously advocate disease prevention, wellness, and promotion of healthy lifestyles, including a focus on population health (IOM, 2003b).

Population Health Interventions: Actions intended to improve the health of a collection of individuals having personal or environmental characteristics in common. Population health interventions are based on population-focused assessments.

Professional Nurse: An individual prepared with a minimum of a baccalaureate in nursing but is also inclusive of one who *enters* professional practice with a master's degree in nursing or a nursing doctorate (AACN, 1998).

Simulation: An activity that mimics the reality of a clinical environment and is designed to demonstrate procedures, decision-making, and critical thinking through techniques

such as role-playing and the use of devices (e.g., interactive videos, mannequins) (National Council of State Boards of Nursing, 2005).

Spiritual Care: "Interventions, individual or communal, that facilitate the ability to experience the integration of the body, mind, and spirit to achieve wholeness, health, and a sense of connection to self, others, and a higher power" (American Nurses Association and Health Ministries Association, 2005, p. 38).

Spirituality: Speaks to what gives ultimate meaning and purpose to one's life. It is that part of people that seeks healing and reconciliation with self or others (Puchalski, 2006).

Vulnerable Populations: Refers to social groups with increased relative risk (i.e., exposure to risk factors) or susceptibility to health-related problems. The vulnerability is evidenced in higher comparative mortality rates, lower life expectancy, reduced access to care, and diminished quality of life (Center for Vulnerable Populations Research, UCLA School of Nursing, 2008).

APPENDIX A

Task Force on the Revision of *The Essentials of Baccalaureate Education for Professional Nursing*

Patricia Martin, PhD, RN *chair*
Dean, Wright State University
College of Nursing and Health

Carol A. Ashton, PhD, RN
Associate Dean and Director,
Idaho State University
School of Nursing

Derryl Block, PhD, MPH, RN
Chair, University of Wisconsin-Green Bay
Professional Program in Nursing

Daisy Cruz-Richman, PhD, RN
Dean, SUNY Downstate Medical Center
College of Nursing

Teri Murray, PhD, RN
Dean, Saint Louis University
School of Nursing

Linda Niedringhaus, PhD, RN, *faculty representative*
Elmhurst College
Deicke Center for Nursing Education

Donald "Chip" Bailey, PhD, RN, *faculty representative*
Duke University
School of Nursing

Jean W. Lange, PhD, RN, CNL, *faculty representative*
Fairfield University
School of Nursing

Roxanne A. Moutafis, MS, RN, BC, *faculty representative*
The University of Arizona
College of Nursing

Judith Sands, EdD, RN, *faculty representative*
University of Virginia
School of Nursing

Karen Drenkard, PhD, RN, NEA-BC, *practice representative*
Chief Nurse Executive,
INOVA Health Systems

Polly Bednash, PhD, RN, FAAN, *staff liaison*
Executive Director

Kathy McGuinn, MSN, RN, CPHQ, *staff liaison*
Director of Special Projects

Joan Stanley, PhD, RN, FAAN, *staff liaison*
Senior Director of Education Policy

Horacio Oliveira, *staff liaison*
Education Policy and Special Projects Assistant

APPENDIX B
Consensus Process to Revise the *Essentials of Baccalaureate Education for Professional Nursing Practice*

In 2006, the AACN Board of Directors established a task force and charged this group to revise and update the 1998 *Essentials* document. This task force was comprised of individuals representing an array of experts in baccalaureate nursing education, including deans and faculty representatives. Additionally, a chief nurse executive represented the practice setting on the committee (see Appendix A). The task force began their work by reviewing the literature and considering the changes occurring in health care, higher education, and health professions education. In February 2007, the task force convened a group of 20 stakeholders representing leaders from higher education, professional nursing, and interprofessional education; in June 2007, three additional stakeholders met with the task force (see Appendix C). These leaders were asked to identify, from their own perspectives, the anticipated role of the professional nurse in the future healthcare system and the critical competencies needed to function in this role. These wide-ranging and lively discussions served as the basis for the development of a draft document that was then shared with nursing professionals on the AACN Web site in August 2007, prior to the beginning of the next phase of the revision process.

The next phase consisted of a series of five regional meetings from September 2007 to April 2008. The purpose of these meetings was to gather feedback and to build consensus about the *Essentials* draft document. Participants, including nurse educators, clinicians, administrators, and researchers representing a range of nursing programs, specialties, and organizations, discussed, debated, and made recommendations regarding the draft document. Over 700 individuals, representing all 50 states and the District of Columbia, participated in the consensus-building process. In addition, 329 schools of nursing, 11 professional organizations, and 13 healthcare delivery systems were represented (see Appendices D, E, & F). To ensure a broad base of nursing input, the task force sought the participation of a wide range of nursing organizations and many of these organizations such as the American Academy of Nursing, Sigma Theta Tau, and American Organization of Nurse Executives sent written feedback to the task force. Nursing administrators and clinicians were specifically asked to participate to ensure that the recommendations for nursing education would address future healthcare practice. Participants in the regional meetings were asked to focus on the rationale supporting each Essential and a list of end of program outcomes. In addition, the participants provided input into the development of supporting documents including a list of integrative learning strategies, quality indicators, and clinical learning environments. The process was iterative and following each of the regional meetings, an updated document was posted on the AACN Web site for review and comment. AACN member schools and the nursing community at large were able to provide ongoing feedback.

On July 19, 2008, the AACN Board unanimously approved the revised *Essentials of Baccalaureate Nursing Education.*

Appendix C
Participants who attended Stakeholder Meetings (N=23)

Amy Berman
John A. Hartford Foundation, Inc.
Program Officer
New York, NY

Linda Cronenwett
Quality and Safety Education for Nurses (QSEN)
Chapel Hill, NC

Lisa Day
The Carnegie Foundation for the Advancement of Teaching
San Francisco, CA

Jerry Gaff
Association of American Colleges & Universities (AAC&U)
Senior Fellow
Washington, DC

Jody Gandy
Interprofessional Professionalism Group, American Physical Therapy Association (APTA)
Director, Physical Therapy Education
Alexandria, VA

Pam Hagan
American Nurses Association (ANA)
Chief Programs Officer
Silver Spring, MD

Janie E. Heath
American Association of Critical-Care Nurses (AACN)
Past Board Member
Aliso Viejo, CA

Jean Jenkins
Advisory Group for Genetics and Genomics National Institutes of Health (NIH), National Human Genome Research Institute (NHGRI)
Senior Clinical Advisor
Bethesda, MD

Linda Olson Keller
Association of State and Territorial Directors of Nursing (ASTDN)
Project Director
Arlington, VA

Darrell Kirch
Association of American Medical Colleges (AAMC)
President
Washington, DC

Ellen Kurtzman
National Quality Forum (NQF)
Senior Program Director
Washington, DC

Pam Malloy
End-of-Life Nursing Education Consortium (ELNEC)
Project Director, AACN
Washington, DC

Jeanne Matthews
Quad Council of Public Health Nursing Organizations
Chair-elect, APHA Public Health Nursing (PHN) Section for the Quad Council
Washington, DC

Leyla McCurdy
National Environmental Education & Training Foundation (NEETF)
Senior Director
Washington, DC

Dula Pacquiao
AACN Cultural Advisory Group,
Associate Professor and Director School of Nursing
University of Medicine & Dentistry of NJ
Newark, NJ

Patricia Rutherford
Institute for Health Care Improvement (IHI)
Vice President
Cambridge, MA

Douglas Scheckelhoff
American Society of Health-System Pharmacists (ASHP)
Director, Pharmacy Practice Sections
Bethesda, MD

Nancy Spector
National Council of State Boards of Nursing (NCSBN)
Director of Education
Chicago, IL

Molly Sutphen
The Carnegie Foundation for the Advancement of Teaching
Research Scholar
Stanford, CA

Todd Uhlmann
National Student Nurses Association (NSNA)
President
Brooklyn, NY

Tener Veneema
Disaster Preparedness Expert
Associate Professor of Clinical Nursing
University of Rochester
Rochester, NY

Mary Wakefield
Institute of Medicine (IOM) Chair of Quality Chasm Series
Health Care Services Board,
Associate Dean for Rural Health,
University of North Dakota
Washington, DC

Julia Watkins
Council on Social Work Education
Executive Director
Alexandria, VA

The Essentials of Master's Education in Nursing
March 21, 2011

The *Essentials of Master's Education in Nursing* reflect the profession's continuing call for imagination, transformative thinking, and evolutionary change in graduate education. The extraordinary explosion of knowledge, expanding technologies, increasing diversity, and global health challenges produce a dynamic environment for nursing and amplify nursing's critical contributions to health care. Master's education prepares nurses for flexible leadership and critical action within complex, changing systems, including health, educational, and organizational systems. Master's education equips nurses with valuable knowledge and skills to lead change, promote health, and elevate care in various roles and settings. Synergy with these *Essentials,* current and future healthcare reform legislation, and the action-oriented recommendations of the Initiative on the Future of Nursing (IOM, 2010) highlights the value and transforming potential of the nursing profession.

These *Essentials* are core for all master's programs in nursing and provide the necessary curricular elements and framework, regardless of focus, major, or intended practice setting. These *Essentials* delineate the outcomes expected of all graduates of master's nursing programs. These *Essentials* are not prescriptive directives on the design of programs. Consistent with the *Baccalaureate* and *Doctorate of Nursing Practice Essentials*, this document does not address preparation for specific roles, which may change and emerge over time. These *Essentials* also provide guidance for master's programs during a time when preparation for specialty advanced nursing practice is transitioning to the doctoral level.

Master's education remains a critical component of the nursing education trajectory to prepare nurses who can address the gaps resulting from growing healthcare needs. Nurses who obtain the competencies outlined in these *Essentials* have significant value for current and emerging roles in healthcare delivery and design through advanced nursing knowledge and higher level leadership skills for improving health outcomes. For some nurses, master's education equips them with a fulfilling lifetime expression of their mastery area. For others, this core is a graduate foundation for doctoral education. Each preparation is valued.

Introduction

The dynamic nature of the healthcare delivery system underscores the need for the nursing profession to look to the future and anticipate the healthcare needs for which nurses must be prepared to address. The complexities of health and nursing care today make expanded nursing knowledge a necessity in contemporary care settings. The transformation of health care and nursing practice requires a new conceptualization of master's education. Master's education must prepare the graduate to:

- Lead change to improve quality outcomes,

- Advance a culture of excellence through lifelong learning,
- Build and lead collaborative interprofessional care teams,
- Navigate and integrate care services across the healthcare system,
- Design innovative nursing practices, and
- Translate evidence into practice.

Graduates of master's degree programs in nursing are prepared with broad knowledge and practice expertise that builds and expands on baccalaureate or entry-level nursing practice. This preparation provides graduates with a fuller understanding of the discipline of nursing in order to engage in higher level practice and leadership in a variety of settings and commit to lifelong learning. For those nurses seeking a terminal degree, the highest level of preparation within the discipline, the new conceptualization for master's education will allow for seamless movement into a research or practice-focused doctoral program (AACN, 2006, 2010).

The nine Essentials addressed in this document delineate the knowledge and skills that *all* nurses prepared in master's nursing programs acquire. These Essentials guide the preparation of graduates for diverse areas of practice in any healthcare setting.

- **Essential I: Background for Practice from Sciences and Humanities**
  - Recognizes that the master's-prepared nurse integrates scientific findings from nursing, biopsychosocial fields, genetics, public health, quality improvement, and organizational sciences for the continual improvement of nursing care across diverse settings.
- **Essential II: Organizational and Systems Leadership**
  - Recognizes that organizational and systems leadership are critical to the promotion of high quality and safe patient care. Leadership skills are needed that emphasize ethical and critical decision making, effective working relationships, and a systems-perspective.
- **Essential III: Quality Improvement and Safety**
  - Recognizes that a master's-prepared nurse must be articulate in the methods, tools, performance measures, and standards related to quality, as well as prepared to apply quality principles within an organization.
- **Essential IV: Translating and Integrating Scholarship into Practice**
  - Recognizes that the master's-prepared nurse applies research outcomes within the practice setting, resolves practice problems, works as a change agent, and disseminates results.
- **Essential V: Informatics and Healthcare Technologies**

    - Recognizes that the master's-prepared nurse uses patient-care technologies to deliver and enhance care and uses communication technologies to integrate and coordinate care.
- **Essential VI: Health Policy and Advocacy**
    - Recognizes that the master's-prepared nurse is able to intervene at the system level through the policy development process and to employ advocacy strategies to influence health and health care.
- **Essential VII: Interprofessional Collaboration for Improving Patient and Population Health Outcomes**
    - Recognizes that the master's-prepared nurse, as a member and leader of interprofessional teams, communicates, collaborates, and consults with other health professionals to manage and coordinate care.
- **Essential VIII: Clinical Prevention and Population Health for Improving Health**
    - Recognizes that the master's-prepared nurse applies and integrates broad, organizational, client-centered, and culturally appropriate concepts in the planning, delivery, management, and evaluation of evidence-based clinical prevention and population care and services to individuals, families, and aggregates/identified populations.
- **Essential IX: Master's-Level Nursing Practice**
    - Recognizes that nursing practice, at the master's level, is broadly defined as any form of nursing intervention that influences healthcare outcomes for individuals, populations, or systems. Master's-level nursing graduates must have an advanced level of understanding of nursing and relevant sciences as well as the ability to integrate this knowledge into practice. . Nursing practice interventions include both direct and indirect care components.

Master's Education in Nursing and Areas of Practice

Graduates with a master's degree in nursing are prepared for a variety of roles and areas of practice. Graduates may pursue new and innovative roles that result from health reform and changes in an evolving and global healthcare system. Some graduates will pursue direct care practice roles in a variety of settings (e.g., the Clinical Nurse Leader, nurse educator). Others may choose indirect care roles or areas of practice that focus on aggregate, systems, or have an organizational focus, (e.g. nursing or health program management, informatics, public health, or clinical research coordinator). In addition to developing competence in the nine Essential core areas delineated in this document, each graduate will have additional coursework in an area of practice or functional role. This coursework may include more in-depth preparation and competence in one or two of the Essentials or in an additional/ supplementary area of practice.

For example, more concentrated coursework or further development of the knowledge and skills embedded in Essential IV (Translational Scholarship for Evidence-Based Practice) will prepare the nurse to manage research projects for nurse scientists and other

healthcare researchers working in multi-professional research teams. More in-depth preparation in Essential II (Organizational and System Leadership) will provide knowledge useful for nursing management roles.

In some instances, graduates of master's in nursing programs will seek to fill roles as educators. As outlined in Essential IX, all master's-prepared nurses will develop competence in applying teaching/learning principles in work with patients and/or students across the continuum of care in a variety of settings. However, as recommended in the Carnegie Foundation report (2009), *Educating Nurses: A Call for Radical Transformation,* those individuals, as do all master's graduates, who choose a nurse educator role require preparation across all nine Essential areas, including graduate-level clinical practice content and experiences. In addition, a program preparing individuals for a nurse educator role should include preparation in curriculum design and development, teaching methodologies, educational needs assessment, and learner-centered theories and methods. Master's prepared nurses may teach patients and their families and/or student nurses, staff nurses, and variety of direct-care providers. The master's prepared nurse educator differs from the BSN nurse in depth of his/her understanding of the nursing discipline, nursing practice, and the added pedagogical skills. To teach students, patients, and caregivers regarding health promotion, disease prevention, or disease management, the master's-prepared nurse educator builds on baccalaureate knowledge with *graduate-level content in the areas of health assessment, physiology/pathophysiology, and pharmacology* to strengthen his/her scientific background and facilitate his/her understanding of nursing and health-related information. Those master's students who aspire to faculty roles in baccalaureate and higher degree programs will be advised that additional education at the doctoral level is needed (AACN, 2008).

Context for Nursing Practice

Health care in the United States and globally is changing dramatically. Interest in evolving health care has prompted greater focus on health promotion and illness prevention, along with cost-effective approaches to high acuity, chronic disease management, care coordination, and long-term care. Public concerns about cost of health care, fiscal sustainability, healthcare quality, and development of sustainable solutions to healthcare problems are driving reform efforts. Attention to affordability and accessibility of health care, maintaining healthy environments, and promoting personal and community responsibility for health is growing among the public and policy makers.

In addition to broad public mandates for a reformed and responsive healthcare system, a number of groups are calling for changes in the ways all health professionals are educated to meet current and projected needs for contemporary care delivery. The Institute of

Medicine (IOM), an interprofessional healthcare panel, described a set of core competencies that all health professionals regardless of discipline will demonstrate: 1) the provision of patient-centered care, 2) working in interprofessional teams, 3) employing evidence-based practice, 4) applying quality improvement approaches, and 5) utilizing informatics (IOM, 2003).

Given the ongoing public trust in nursing (Gallup, 2010), and the desire for fundamental reorganization of relationships among individuals, the public, healthcare organizations and healthcare professionals, graduate education for nurses is needed that is wide in scope and breadth, emphasizes all systems-level care and includes mastery of practice knowledge and skills. Such preparation reflects mastery of higher level thinking and conceptualization skills than at the baccalaureate level, as well as an understanding of the interrelationships among practice, ethical, and legal issues; financial concerns and comparative effectiveness; and interprofessional teamwork.

Master's Nursing Education Curriculum

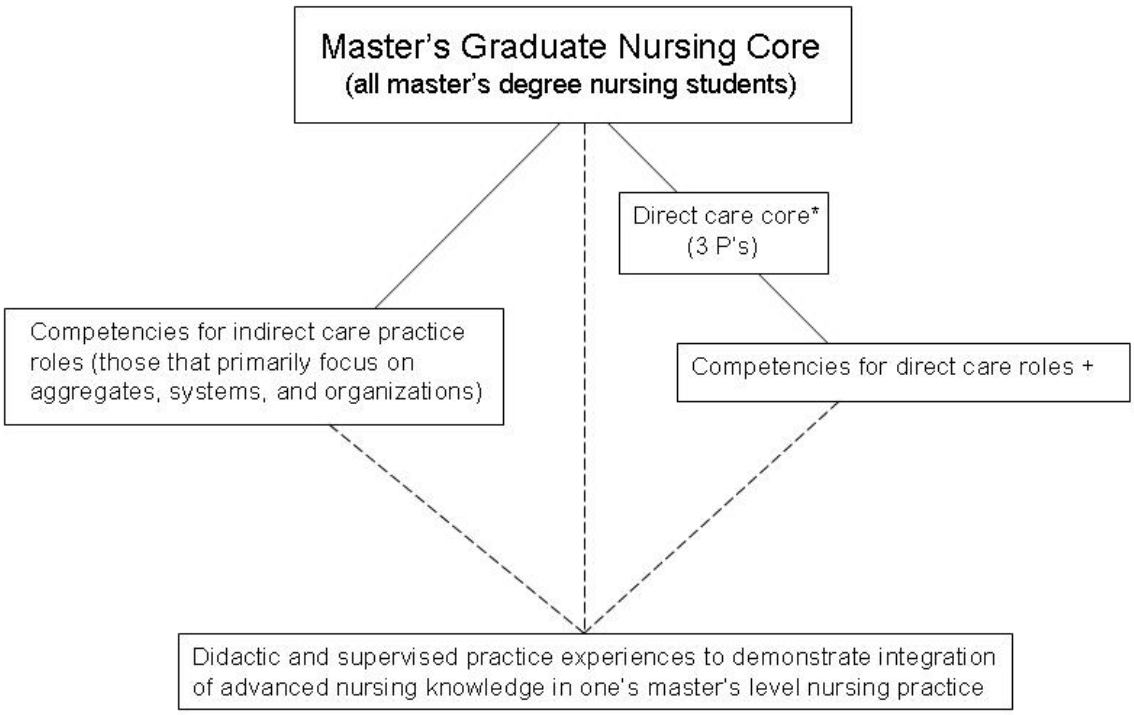
The master's nursing curriculum is conceptualized in Figure 1 and includes three components:

1. Graduate Nursing Core: foundational curriculum content deemed essential for all students who pursue a master's degree in nursing regardless of the functional focus.
2. Direct Care Core: essential content to provide direct patient services at an advanced level.
3. Functional Area Content: those clinical and didactic learning experiences identified and defined by the professional nursing organizations and certification bodies for specific nursing roles or functions.

This document delineates the graduate nursing core competencies for all master's graduates. These core outcomes reflect the many changes in the healthcare system occurring over the past decade. In addition, these expected outcomes for all master's degree graduates reflect the increasing responsibility of nursing in addressing many of the gaps in health care as well as growing patient and population needs.

Master's nursing education, as is all nursing education, is evolving to meet these needs and to prepare nurses to assume increasing accountabilities, responsibilities, and leadership positions. As master's nursing education is re-envisioned and preparation of individuals for advanced specialty nursing practice transitions to the practice doctorate these *Essentials* delineate the foundational, core expectations for these master's program graduates until the transition is completed.

Figure 1: Model of Master's Nursing Curriculum



* *All* master's degree programs that prepare graduates for roles that have a component of direct care practice are required to have graduate level content/coursework in the following three areas: physiology/pathophysiology, health assessment, and pharmacology. However, graduates being prepared for any one of the four APRN roles (CRNA, CNM, CNS, or CNP), must complete three separate comprehensive, graduate level courses that meet the criteria delineated in the 2008 *Consensus Model for APRN Licensure, Accreditation, Certification and Education*. (http://www.aacn.nche.edu/education/pdf/APRNReport.pdf). In addition, the expected outcomes for each of these three APRN core courses are delineated in *The Essentials of Doctoral Education for Advanced Nursing Practice* (pg. 23-24) (http://www.aacn.nche.edu/DNP/pdf/Essentials.pdf).

+ The nursing educator is a direct care role and therefore requires graduate-level content in the three Direct Care Core courses. *All graduates of a master's nursing program must have supervised practice experiences that are sufficient to demonstrate mastery of the Essentials.* The term "supervised" is used broadly and can include precepted experiences with faculty site visits. These learning experiences may be accomplished through diverse teaching methods, including face-to-face or simulated methods.

In addition, development of clinical proficiency is facilitated through the use of focused and sustained clinical experiences designed to strengthen patient care delivery skills, as

well as system assessment and intervention skills, which will lead to an enhanced understanding of organizational dynamics. These immersion experiences afford the student an opportunity to focus on a population of interest or may focus on a specific role. Most often, the immersion experience occurs toward the end of the program as a culminating synthesis experience.

The *Essentials of Master's Education in Nursing*

Essential I: Background for Practice from Sciences and Humanities

Rationale

Master's-prepared nurses build on the competencies gained in a baccalaureate nursing program by developing a deeper understanding of nursing and the related sciences needed to fully analyze, design, implement, and evaluate nursing care. These nurses are well prepared to provide care to diverse populations and cohorts of patients in clinical and community-based systems. The master's-prepared nurse integrates findings from the sciences and the humanities, biopsychosocial fields, genetics, public health, quality improvement, health economics, translational science, and organizational sciences for the continual improvement of nursing care at the unit, clinic, home, or program level. Master's-prepared nursing care reflects a more sophisticated understanding of assessment, problem identification, design of interventions, and evaluation of aggregate outcomes than baccalaureate-prepared nursing care.

Students being prepared for direct care roles will have graduate-level content that builds upon an undergraduate foundation in health assessment, pharmacology, and pathophysiology. Having master's-prepared graduates with a strong background in these three areas is seen as imperative from the practice perspective. It is recommended that the master's curriculum preparing individuals for direct care roles include three separate graduate-level courses in these three content areas. In addition, the inclusion of these three separate courses facilitates the transition of these master's program graduates into the DNP advanced-practice registered-nurse programs.

Master's-prepared nurses understand the intersection between systems science and organizational science in order to serve as integrators within and across systems of care. Care coordination is based on systems science (Nelson et al., 2008). Care management incorporates an understanding of the clinical and community context, and the research relevant to the needs of the population. Nurses at this level use advanced clinical reasoning for ambiguous and uncertain clinical presentations, and incorporate concerns of family, significant others, and communities into the design and delivery of care. Master's-prepared nurses use a variety of theories and frameworks, including nursing and ethical theories in the analysis of clinical problems, illness prevention, and health promotion strategies. Knowledge from information sciences, health communication, and health literacy are used to provide care to multiple populations. These nurses are able to

address complex cultural issues and design care that responds to the needs of multiple populations, who may have potentially conflicting cultural needs and preferences. As healthcare technology becomes more sophisticated and its use more widespread, master's-prepared nurse are able to evaluate when its use is appropriate for diagnostic, educational, and therapeutic interventions. Master's-prepared nurses use improvement science and quality processes to evaluate outcomes of the aggregate of patients, community members, or communities under their care, monitor trends in clinical data, and understand the implications of trends for changing nursing care.

The master's-degree program prepares the graduate to:

1. Integrate nursing and related sciences into the delivery of advanced nursing care to diverse populations.

2. Incorporate current and emerging genetic/genomic evidence in providing advanced nursing care to individuals, families, and communities while accounting for patient values and clinical judgment.

3. Design nursing care for a clinical or community-focused population based on biopsychosocial, public health, nursing, and organizational sciences.

4. Apply ethical analysis and clinical reasoning to assess, intervene, and evaluate advanced nursing care delivery.

5. Synthesize evidence for practice to determine appropriate application of interventions across diverse populations.

6. Use quality processes and improvement science to evaluate care and ensure patient safety for individuals and communities.

7. Integrate organizational science and informatics to make changes in the care environment to improve health outcomes.

8. Analyze nursing history to expand thinking and provide a sense of professional heritage and identity.

Sample Content

- Healthcare economics and finance models
- Advanced nursing science, including the major streams of nursing scientific development
- Scientific bases of illness prevention, health promotion, and wellness
- Genetics, genomics, and pharmacogenomics
- Public health science, such as basic epidemiology, surveillance, environmental science, and population health analysis and program planning
- Organizational sciences

- Systems science and integration, including microsystems, mesosystems, and macro-level systems
- Chaos theory and complexity science
- Leadership science
- Theories of bioethics
- Information science
- Quality processes and improvement science
- Technology assessment
- Nursing Theories

Essential II: Organizational and Systems Leadership

Rationale

Organizational and systems leadership are critical to the promotion of high quality and safe patient care. Leadership skills are needed that emphasize ethical and critical decision making. The master's-prepared nurse's knowledge and skills in these areas are consistent with nursing and healthcare goals to eliminate health disparities and to promote excellence in practice. Master's-level practice includes not only direct care but also a focus on the systems that provide care and serve the needs of a panel of patients, a defined population, or community.

To be effective, graduates must be able to demonstrate leadership by initiating and maintaining effective working relationships using mutually respectful communication and collaboration within interprofessional teams, demonstrating skills in care coordination, delegation, and initiating conflict resolution strategies. The master's-prepared nurse provides and coordinates comprehensive care for patients–individuals, families, groups, and communities–in multiple and varied settings. Using information from numerous sources, these nurses navigate the patient through the healthcare system and assume accountability for quality outcomes. Skills essential to leadership include communication, collaboration, negotiation, delegation, and coordination.

Master's-prepared nurses are members and leaders of healthcare teams that deliver a variety of services. These graduates bring a unique blend of knowledge, judgment, skills, and caring to the team. As a leader and partner with other health professionals, these nurses seek collaboration and consultation with other providers as necessary in the design, coordination, and evaluation of patient care outcomes.

In an environment with ongoing changes in the organization and financing of health care, it is imperative that all master's-prepared nurses have a keen understanding of healthcare policy, organization, and financing. The purpose of this content is to prepare a graduate to provide quality cost-effective care; to participate in the implementation of care; and to

assume a leadership role in the management of human, fiscal, and physical healthcare resources. Program graduates understand the economies of care, business principles, and how to work within and affect change in systems.

The master's-prepared nurse must be able to analyze the impact of systems on patient outcomes, including analyzing error rates. These nurses will be prepared with knowledge and expertise in assessing organizations, identifying systems' issues, and facilitating organization-wide changes in practice delivery. Master's-prepared nurses must be able to use effective interdisciplinary communication skills to work across departments identifying opportunities and designing and testing systems and programs to improve care. In addition, nurse practice at this level requires an understanding of complexity theory and systems thinking, as well as the business and financial acumen needed for the analysis of practice quality and costs.

The master's-degree program prepares the graduate to:

1. Apply leadership skills and decision making in the provision of culturally responsive, high-quality nursing care, healthcare team coordination, and the oversight and accountability for care delivery and outcomes.

2. Assume a leadership role in effectively implementing patient safety and quality improvement initiatives within the context of the interprofessional team using effective communication (scholarly writing, speaking, and group interaction) skills.

3. Develop an understanding of how healthcare delivery systems are organized and financed (and how this affects patient care) and identify the economic, legal, and political factors that influence health care.

4. Demonstrate the ability to use complexity science and systems theory in the design, delivery, and evaluation of health care.

5. Apply business and economic principles and practices, including budgeting, cost/benefit analysis, and marketing, to develop a business plan.

6. Design and implement systems change strategies that improve the care environment.

7. Participate in the design and implementation of new models of care delivery and coordination.

Sample Content

• Leadership, including theory, leadership styles, contemporary approaches, and strategies (organizing, managing, delegating, supervising, collaborating, coordinating)
• Data-driven decision-making based on an ethical framework to promote culturally responsive, quality patient care in a variety of settings, including creative and imaginative strategies in problem solving
• Communication–both interpersonal and organizational–including elements and channels, models, and barriers
• Conflict, including conflict resolution, mediation, negotiation, and managing conflict
• Change theory and social change theories
• Systems theory and complexity science
• Healthcare systems and organizational relationships (e.g., finance, organizational structure, and delivery of care, including mission/vision/philosophy and values)
• Healthcare finance, including budgeting, cost/benefit analysis, variance analysis, and marketing
• Operations research (e.g., queuing theory, supply chain management, and systems designs in health care)
• Teams and teamwork, including team leadership, building effective teams, and nurturing teams

Essential III: Quality Improvement and Safety

Rationale

Continuous quality improvement involves every level of the healthcare organization. A master's-prepared nurse must be articulate in the methods, tools, performance measures, culture of safety principles, and standards related to quality, as well as prepared to apply quality principles within an organization to be an effective leader and change agent.

The Institute of Medicine report (1998) *To Err is Human* defined patient safety as "freedom from accidental injury" and stated that patients should not be at greater risk for accidental injury in a hospital or healthcare setting than they are in their own home. Improvement in patient safety along with reducing and ultimately eliminating harm to patients is fundamental to quality care. Skills are needed that assist in identifying actual or potential failures in processes and systems that lead to breakdowns and errors and then redesigning processes to make patients safe.

Knowledge and skills in human factors and basic safety design principles that affect unsafe practices are essential. Graduates of master's-level programs must be able to analyze systems and work to create a just culture of safety in which personnel feel comfortable disclosing errors—including their own—while maintaining professional

accountability. Learning how to evaluate, calculate, and improve the overall reliability of processes are core skills needed by master's-prepared nurses.

Knowledge of both the potential and the actual impact of national patient safety resources, initiatives, and regulations and the use of national benchmarks are required. Changes in healthcare reimbursement with the introduction of Medicare's list of "never events" and the regulatory push for more transparency on quality outcomes require graduates to be able to determine if the outcomes of standards of practice, performance, and competence have been met and maintained.

The master's-prepared nurse provides leadership across the care continuum in diverse settings using knowledge regarding high reliability organizations. These organizations achieve consistently safe and effective performance records despite unpredictable operating environments or intrinsically hazardous endeavors (Weick, 2001). The master's-prepared nurse will be able to monitor, analyze, and prioritize outcomes that need to be improved. Using quality improvement and high reliability organizational principles, these nurses will be able to quantify the impact of plans of action.

The master's-degree program prepares the graduate to:

1. Analyze information about quality initiatives recognizing the contributions of individuals and inter-professional healthcare teams to improve health outcomes across the continuum of care.

2. Implement evidence-based plans based on trend analysis and quantify the impact on quality and safety.

3. Analyze information and design systems to sustain improvements and promote transparency using high reliability and just culture principles.

4. Compare and contrast several appropriate quality improvement models.

5. Promote a professional environment that includes accountability and high-level communication skills when involved in peer review, advocacy for patients and families, reporting of errors, and professional writing.

6. Contribute to the integration of healthcare services within systems to affect safety and quality of care to improve patient outcomes and reduce fragmentation of care.

7. Direct quality improvement methods to promote culturally responsive, safe, timely, effective, efficient, equitable, and patient-centered care.

8. Lead quality improvement initiatives that integrate socio-cultural factors affecting the delivery of nursing and healthcare services.

Sample Content

• Quality improvement models differentiating structure, process, and outcome indicators
• Principles of a just culture and relationship to analyzing errors
• Quality improvement methods and tools: Brainstorming, Fishbone cause and effect diagram, flow chart, Plan, Do Study, Act (PDSA), Plan, Do, Check, Act (PDCA),Find, Organize, Clarify, Understand, Select-Plan, Do, Check, Act (FOCUS-PDCA), Six Sigma, Lean
• High-Reliability Organizations (HROs) / High-reliability techniques
• National patient safety goals and other relevant regulatory standards (e.g., CMS core measures, pay for performance indicators, and never events)
• Nurse-sensitive indicators
• Data management (e.g., collection tools, display techniques, data analysis, trend analysis, control charts)
•Analysis of errors (e.g., Root Cause Analysis [RCA], Failure Mode Effects Analysis [FMEA], serious safety events)
• Communication (e.g., hands-off communication, chain-of-command, error disclosure)
• Participate in executive patient safety rounds
• Simulation training in a variety of settings (e.g., disasters, codes, and other high-risk clinical areas)
• RN fit for duty/impact of fatigue and distractions in care environment on patient safety

Essential IV: Translating and Integrating Scholarship into Practice

Rationale

Professional nursing practice at all levels is grounded in the ethical translation of current evidence into practice. Fundamentally, nurses need a questioning/inquiring attitude toward their practice and the care environment.

The master's-prepared nurse examines policies and seeks evidence for every aspect of practice, thereby translating current evidence and identifying gaps where evidence is lacking. These nurses apply research outcomes within the practice setting, resolve practice problems (individually or as a member of the healthcare team), and disseminate results both within the setting and in wider venues in order to advance clinical practice. Changing practice locally, as well as more broadly, demands that the master's-prepared nurse is skilled at challenging current practices, procedures, and policies. The emerging sciences referred to as implementation or improvement sciences are providing evidence about the processes that are effective when making needed changes where the change processes and context are themselves evidence based (Damschroder et al., 2009; Sobo, Bowman, & Gifford, 2008; van Achterberg, Schoonhoven, & Grol, 2008). Master's-

prepared nurses, therefore, must be able to implement change deemed appropriate given context and outcome analysis, and to assist others in efforts to improve outcomes.

Master's-prepared nurses lead continuous improvement processes based on translational research skills. The cyclical processes in which these nurses are engaged includes identifying questions needing answers, searching or creating the evidence for potential solutions/innovations, evaluating the outcomes, and identifying additional questions.

Master's-prepared nurses, when appropriate, lead the healthcare team in the implementation of evidence-based practice. These nurses support staff in lifelong learning to improve care decisions, serving as a role model and mentor for evidence-based decision making. Program graduates must possess the skills necessary to bring evidence-based practice to both individual patients for whom they directly care and to those patients for whom they are indirectly responsible. Those skills include knowledge acquisition and dissemination, working in groups, and change management.

The master's-degree program prepares the graduate to:

1. Integrate theory, evidence, clinical judgment, research, and interprofessional perspectives using translational processes to improve practice and associated health outcomes for patient aggregates.
2. Advocate for the ethical conduct of research and translational scholarship (with particular attention to the protection of the patient as a research participant).
3. Articulate to a variety of audiences the evidence base for practice decisions, including the credibility of sources of information and the relevance to the practice problem confronted.
4. Participate, leading when appropriate, in collaborative teams to improve care outcomes and support policy changes through knowledge generation, knowledge dissemination, and planning and evaluating knowledge implementation.
5. Apply practice guidelines to improve practice and the care environment.
6. Perform rigorous critique of evidence derived from databases to generate meaningful evidence for nursing practice.

Sample Content:

• Research process
• Implementation/Improvement science
• Evidence-based practice:

- Clinical decision making
- Critical thinking
- Problem identification
- Outcome measurement

• Translational science:
- Data collection in nursing practice
- Design of databases that generate meaningful evidence for nursing practice
- Data analysis in practice
- Evidence-based interventions
- Prediction and analysis of outcomes
- Patterns of behavior and outcomes
- Gaps in evidence for practice
- Importance of cultural relevance

• Scholarship:
- Application of research to the clinical setting
- Resolution of clinical problems
- Appreciative inquiry
- Dissemination of results

• Advocacy in research
• Research ethics
• Knowledge acquisition
• Group process
• Management of change
• Evidence-based policy development in practice
• Quality improvement models/methodologies
• Safety issues in practice
• Innovation processes

Essential V: **Informatics and Healthcare Technologies**

Rationale

Informatics and healthcare technologies encompass five broad areas:

- Use of patient care and other technologies to deliver and enhance care;
- Communication technologies to integrate and coordinate care;
- Data management to analyze and improve outcomes of care;
- Health information management for evidence-based care and health education; and

- Facilitation and use of electronic health records to improve patient care.

Knowledge and skills in each of these four broad areas is essential for all master's-prepared nurses. The extent and focus of each will vary depending upon the nurse's role, setting, and practice focus.

Knowledge and skills in information and healthcare technology are critical to the delivery of quality patient care in a variety of settings (IOM, 2003a). The use of technologies to deliver, enhance, and document care is changing rapidly. In addition, information technology systems, including decision-support systems, are essential to gathering evidence to impact practice. Improvement in cost effectiveness and safety depend on evidence-based practice, outcomes research, interprofessional care coordination, and electronic health records, all of which involve information management and technology (McNeil et al., 2006). As nursing and healthcare practices evolve to better meet patient needs, the application of these technologies will change as well.

As the use of technology expands, the master's-prepared nurse must have the knowledge and skills to use current technologies to deliver and coordinate care across multiple settings, analyze point of care outcomes, and communicate with individuals and groups, including the media, policymakers, other healthcare professionals, and the public. Integral to these skills is an attitude of openness to innovation and continual learning, as information systems and care technologies are constantly changing, including their use at the point of care.

Graduates of master's-level nursing programs will have competence to determine the appropriate use of technologies and integrate current and emerging technologies into one's practice and the practice of others to enhance care outcomes. In addition, the master's-prepared nurse will be able to educate other health professionals, staff, patients, and caregivers using current technologies and about the principles related to the safe and effective use of care and information technologies.

Graduates ethically manage data, information, knowledge, and technology to communicate effectively with healthcare team, patients, and caregivers to integrate safe and effective care within and across settings. Master's-prepared nurses use research and clinical evidence to inform practice decisions.

Master's-degree graduates are prepared to gather, document, and analyze outcome data that serve as a foundation for decision making and the implementation of interventions or strategies to improve care outcomes. The master's-prepared nurse uses statistical and epidemiological principles to synthesize these data, information, and knowledge to evaluate and achieve optimal health outcomes.

The usefulness of electronic health records and other health information management systems to evaluate care outcomes is improved by standardized terminologies. Integration

of standardized terminologies in information systems supports day-to-day nursing practice and also the capacity to enhance interprofessional communication and generate standardized data to continuously evaluate and improve practice (American Nurses Association, 2008). Master's-prepared nurses use information and communication technologies to provide guidance and oversight for the development and implementation of health education programs, evidence-based policies, and point-of-care practices by members of the interdisciplinary care team.

Health information is growing exponentially. Health literacy is a powerful tool in health promotion, disease prevention, management of chronic illnesses, and quality of life–all of which are hallmarks of excellence in nursing practice. Master's-prepared nurses serve as information managers, patient advocates, and educators by assisting others(including patients, students, caregivers and healthcare professionals) in accessing, understanding, evaluating, and applying health-related information. The master's-prepared nurse designs and implements education programs for cohorts of patients or other healthcare providers using information and communication technologies.

The master's-degree program prepares the graduate to:

1. Analyze current and emerging technologies to support safe practice environments, and to optimize patient safety, cost-effectiveness, and health outcomes.
2. Evaluate outcome data using current communication technologies, information systems, and statistical principles to develop strategies to reduce risks and improve health outcomes.
3. Promote policies that incorporate ethical principles and standards for the use of health and information technologies.
4. Provide oversight and guidance in the integration of technologies to document patient care and improve patient outcomes.
5. Use information and communication technologies, resources, and principles of learning to teach patients and others.
6. Use current and emerging technologies in the care environment to support lifelong learning for self and others.

Sample Content

- Use of technology, information management systems, and standardized terminology

- Use of standardized terminologies to document and analyze nursing care outcomes
- Bio-health informatics
- Regulatory requirements for electronic data monitoring systems
- Ethical and legal issues related to the use of information technology, including copyright, privacy, and confidentiality issues
- Retrieval information systems, including access, evaluation of data, and application of relevant data to patient care
- Statistical principles and analyses of outcome data
- Online review and resources for evidence-based practice
- Use and implementation of technology for virtual care delivery and monitoring
- Electronic health record, including policies related to the implementation of and use to impact care outcomes
- Complementary roles of the master's-prepared nursing and information technology professionals, including nurse informaticist and quality officer
- Use of technology to analyze data sets and their use to evaluate patient care outcomes
- Effective use of educational/instructional technology
- Point-of-care information systems and decision support systems

Essential VI: Health Policy and Advocacy

Rationale

The healthcare environment is ever-evolving and influenced by technological, economic, political, and sociocultural factors locally and globally. Graduates of master's degree nursing programs have requisite knowledge and skills to promote health, help shape the health delivery system, and advance values like social justice through policy processes and advocacy. Nursing's call to political activism and policy advocacy emerges from many different viewpoints. As more evidence links the broad psychosocial, economic, and cultural factors to health status, nurses are compelled to incorporate these factors into their approach to care. Most often, policy processes and system-level strategies yield the strongest influence on these broad determinants of health. Being accountable for improving the quality of healthcare delivery, nurses must understand the legal and political determinants of the system and have the requisite skills to partner for an improved system. Nurses' involvement in policy debates brings our professional values to bear on the process (Warner, 2003). Master's-prepared nurses will use their political efficacy and competence to improve the health outcomes of populations and improve the quality of the healthcare delivery system.

Policy shapes healthcare systems, influences social determinants of health, and therefore determines accessibility, accountability, and affordability of health care. Health policy creates conditions that promote or impede equity in access to care and health outcomes. Implementing strategies that address health disparities serves as a prelude to influencing policy formation. In order to influence policy, the master's-prepared nurse needs to work within and affect change in systems. To effectively collaborate with stakeholders, the master's-prepared nurse must understand the fiscal context in which they are practicing and make the linkages among policy, financing, and access to quality health care. The graduate must understand the principles of healthcare economics, finance, payment methods, and the relationships between policy and health economics.

Advocacy for patients, the profession, and health-promoting policies is operationalized in divergent ways. Attributes of advocacy include safeguarding autonomy, promoting social justice, using ethical principles, and empowering self and others (Grace, 2001; Hanks, 2007; Xiaoyan & Jezewski, 2006). Giving voice and persuasion to needs and preferred direction at the individual, institution, state, or federal policy level is integral for the master's-prepared nurse.

The master's-degree program prepares the graduate to:

1. Analyze how policies influence the structure and financing of health care, practice, and health outcomes.

2. Participate in the development and implementation of institutional, local, and state and federal policy.

3. Examine the effect of legal and regulatory processes on nursing practice, healthcare delivery, and outcomes.

4. Interpret research, bringing the nursing perspective, for policy makers and stakeholders.

5. Advocate for policies that improve the health of the public and the profession of nursing.

Sample Content

- Policy process: development, implementation, and evaluation
- Structure of healthcare delivery systems
- Theories and models of policy making
- Policy making environments: values, economies, politics, social
- Policy-making process at various levels of government
- Ethical and value-based frameworks guiding policy making

- General principles of microeconomics and macroeconomics, accounting, and marketing strategies.
- Globalization and global health
- Interaction between regulatory processes and quality control
- Health disparities
- Social justice
- Political activism
- Economics of health care

Essential VII: Interprofessional Collaboration for Improving Patient and Population Health Outcomes

Rationale

In a redesigned health system a greater emphasis will be placed on cooperation, communication, and collaboration among all health professionals in order to integrate care in teams and ensure that care is continuous and reliable. Therefore, an expert panel at the Institute of Medicine (IOM) identified working in interdisciplinary teams as one of the five core competencies for all health professionals (IOM, 2003).

Interprofessional collaboration is critical for achieving clinical prevention and health promotion goals in order to improve patient and population health outcomes (APTR, 2008; 2009). Interprofessional practice is critical for improving patient care outcomes and, therefore, a key component of health professional education and lifelong learning (American Association of Colleges of Nursing & the Association of American Medical Colleges, 2010).

The IOM also recognized the need for care providers to demonstrate a greater awareness to "patient values, preferences, and cultural values," consistent with the Healthy People 2010 goal of achieving health equity through interprofessional approaches (USHHS, 2000). In this context, knowledge of broad determinants of health will enable the master's graduate to succeed as a patient advocate, cultural and systems broker, and to lead and coordinate interprofessional teams across care environments in order to reduce barriers, facilitate access to care, and improve health outcomes. Successfully leading these teams is achieved through skill development and demonstrating effective communication, planning, and implementation of care directly with other healthcare professionals (AACN, 2007).

Improving patient and population health outcomes is contingent on both horizontal and vertical health delivery systems that integrate research and clinical expertise to provide patient-centered care. Inherently the systems must include patients' expressed values, needs, and preferences for shared decision making and management of their care. As

members and leaders of interprofessional teams, the master's-prepared nurse will actively communicate, collaborate, and consult with other health professionals to manage and coordinate care across systems.

The master's-degree program prepares the graduate to:

1. Advocate for the value and role of the professional nurse as member and leader of interprofessional healthcare teams.

2. Understand other health professions' scopes of practice to maximize contributions within the healthcare team.

3. Employ collaborative strategies in the design, coordination, and evaluation of patient-centered care.

4. Use effective communication strategies to develop, participate, and lead interprofessional teams and partnerships.

5. Mentor and coach new and experienced nurses and other members of the healthcare team.

6. Functions as an effective group leader or member based on an in-depth understanding of team dynamics and group processes.

Sample Content

- Scopes of practice for nursing and other professions
- Differing world views among healthcare team members
- Concepts of communication, collaboration, and coordination
- Conflict management strategies and principles of negotiation
- Organizational processes to enhance communication
- Types of teams and team roles
- Stages of team development
- Diversity of teams
- Cultural diversity
- Patient-centered care
- Change theories
- Multiple-intelligence theory
- Group dynamics
- Power structures
- Health-work environments

Essential VIII: Clinical Prevention and Population Health for Improving Health

Rationale

Globally, the burden of illness, communicable disease, chronic disease conditions, and subsequent health inequity and disparity, is borne by those living in poverty and living in low-income and middle-income countries (Beaglehole et al., 2007; Gaziano et al., 2007; WHO, 2008). Similarly, in the U.S. population, health disparities continue to affect disproportionately low-income communities, people of color, and other vulnerable populations (USHHS, 2006).

The implementation of clinical prevention and population health activities is central to achieving the national goal of improving the health status of the population of the United States. Unhealthy lifestyle behaviors continue to account for over 50 percent of preventable deaths in the U.S., yet prevention interventions remain under-utilized in healthcare settings. In an effort to address this national goal, *Healthy People 2010* supported the transformation of clinical education by creating an objective to increase the proportion of schools of medicine, nursing, and other health professionals that have a basic curriculum that includes the core competencies in health promotion and disease prevention (Allan et al., 2004; USHHS, 2000). In the *Healthy People 2010 Midcourse Review,* health disparities are not declining overall, reiterating the necessity to implement and evaluate the effectiveness of disease prevention and health promotion efforts (USHHS, 2006). Cognizant of these trends and successive health outcome data, it will be necessary to re-evaluate these data and for nursing to re-assess its leadership role and responsibility toward improving the population's health.

The Healthy People Curriculum Task Force developed the *Clinical Prevention and Population Health Curriculum Framework,* which identifies four focal areas, including individual and population-oriented preventive interventions. This curriculum guides the development and evaluation of educational competencies expected of health professionals in clinical prevention and population health, and endorsed by clinical professional associations, including AACN (Allan, 2004; APTR, 2009).

As the diversity of the U.S. population increases, it is crucial that the health system provides care and services that are equitable and responsive to the unique cultural and ethnic identity, socio-economic condition, emotional and spiritual needs, and values of patients and the population (IOM, 2001; 2003). Nursing leadership within health systems is required to design and ensure the delivery of clinical prevention interventions and population-based care that promotes health, reduces the risk of chronic illness, and prevents disease. Acquiring the skills and knowledge necessary to meet this demand is essential for nursing practice (Allan et al., 2004; Allan et al., 2005).

The master's-prepared nurse applies and integrates broad, organizational, patient-centered, and culturally responsive concepts into daily practice. Mastery of these concepts based on a variety of theories is essential in the design and delivery (planning, management, and evaluation) of evidence-based clinical prevention and population care and services to individuals, families, communities, and aggregates/clinical populations nationally and globally.

The master's-degree program prepares the graduate to:

1. Synthesize broad ecological, global and social determinants of health; principles of genetics and genomics; and epidemiologic data to design and deliver evidence-based, culturally relevant clinical prevention interventions and strategies.

2. Evaluate the effectiveness of clinical prevention interventions that affect individual and population-based health outcomes using health information technology and data sources.

3. Design patient-centered and culturally responsive strategies in the delivery of clinical prevention and health promotion interventions and/or services to individuals, families, communities, and aggregates/clinical populations.

4. Advance equitable and efficient prevention services, and promote effective population-based health policy through the application of nursing science and other scientific concepts.

5. Integrate clinical prevention and population health concepts in the development of culturally relevant and linguistically appropriate health education, communication strategies, and interventions.

Sample Content

- Environmental health
- Epidemiology
- Biostatistical methods and analysis
- Disaster preparedness and management
- Emerging science of complementary and alternative medicine and therapeutics
- Ecological model of the social determinants of health
- Teaching and learning theories
- Health disparities, equity and social justice
- Program planning, design, and evaluation
- Quality improvement and change management
- Health promotion and disease prevention
- Application of health behavior modification
- Health services financing
- Health information management

- Ethical frameworks
- Interprofessional collaboration
- Theories and applications of health literacy and health communication
- Genetics/genomic risk assessment for vulnerable populations
- Organization of clinical, public health, and global systems
- Frameworks for community and political engagement, advocacy, and empowerment
- Frameworks for addressing global health and emerging health issues
- Nursing Theories

Essential IX: Master's-Level Nursing Practice

Rationale

Essential IX describes master's-level nursing practice at the completion of the master's program in nursing. Nursing practice at the master's level is broadly defined as any form of nursing intervention that influences healthcare outcomes for individuals, populations, or systems. Master's-level nursing graduates must have an expanded level of understanding of nursing and related sciences built on the *Essentials of Baccalaureate Education for Professional Nursing Practice*. Master's-prepared nurses have developed a deeper understanding of the nursing profession based on reflective practices and continue to develop their own plans for lifelong learning and professional development.

Nursing-practice interventions include both direct and indirect care components. As a practice discipline, clinical care is the core business of nursing practice whether the graduate is focused on the provision of care to individuals, population-focused care, administration, informatics, education or health policy. Master's nursing education prepares graduates to implement safe, quality care in a variety of settings and roles.

This Essential includes the *practice-focused* outcomes for all master's-prepared nurses. Master's level nursing practice builds upon the practice competencies delineated in the *Essentials of Baccalaureate Education for Professional Nursing Practice* (AACN, 2008). Master's-prepared nurses possess a mastery level of understanding of nursing theory, science and practice. Recent and evolving trends in health care require integration of key concepts into all master's-prepared nursing practice. This includes concepts related to quality improvement, patient safety, economics of health care, environmental science, epidemiology, genetics/genomics, gerontology, global healthcare environment and perspectives, health policy, informatics, organizations and systems, communication, negotiation, advocacy, and interprofessional practice.

Master's nursing education prepares graduates to influence the delivery of safe, quality care to diverse populations in a variety of settings and roles. The realities of a global society, expanding technologies, and an increasingly diverse population require these

nurses to master complex information, to coordinate a variety of care experiences, to use technology for healthcare information and evaluation of nursing outcomes, and to assist diverse patients with managing an increasingly complex system of care. The master's-prepared nurse is accountable for assessing the impact of research and advocates for participants, personnel, and systems integrity. As master's-prepared nurses practicing in any setting or role, graduates must understand the foundations of care and the art and science of nursing practice as it relates to individuals, families, and clinical populations within an increasingly complex healthcare system. The extraordinary explosion of knowledge in the field also requires an increased emphasis on lifelong learning.

Essential IX specifies the foundational practice competencies that cut across all areas of practice and are seen as requisite for all master's level nursing practice. Master's-degree nursing programs provide learning experiences that are based in a variety of settings. These learning experiences will be integrated throughout the master's program of study, to provide additional practice experiences beyond those acquired in a baccalaureate or entry-level nursing program.

The master's-degree program prepares the graduate to:

1. Conduct a comprehensive and systematic assessment as a foundation for decision making.

2. Apply the best available evidence from nursing and other sciences as the foundation for practice.

3. Advocate for patients, families, caregivers, communities and members of the healthcare team.

4. Use information and communication technologies to advance patient education, enhance accessibility of care, analyze practice patterns, and improve health care outcomes, including nurse sensitive outcomes.

5. Use leadership skills to teach, coach, and mentor other members of the healthcare team.

6. Use epidemiological, social, and environmental data in drawing inferences regarding the health status of patient populations and interventions to promote and preserve health and healthy lifestyles.

7. Use knowledge of illness and disease management to provide evidence-based care to populations, perform risk assessments, and design plans or programs of care.

8. Incorporate core scientific and ethical principles in identifying potential and actual ethical issues arising from practice, including the use of technologies, and in assisting patients and other healthcare providers to address such issues.

9. Apply advanced knowledge of the effects of global environmental, individual and population characteristics to the design, implementation, and evaluation of care.

10. Employ knowledge and skills in economics, business principles, and systems in the design, delivery, and evaluation of care.

11. Apply theories and evidence-based knowledge in leading, as appropriate, the healthcare team to design, coordinate, and evaluate the delivery of care.

12. Apply learning, and teaching principles to the design, implementation, and evaluation of health education programs for individuals or groups in a variety of settings.

13. Establish therapeutic relationships to negotiate patient-centered, culturally appropriate, evidence-based goals and modalities of care.

14. Design strategies that promote lifelong learning of self and peers and that incorporate professional nursing standards and accountability for practice.

15. Integrate an evolving personal philosophy of nursing and healthcare into one's nursing practice.

Sample Content

- Principles of leadership, including horizontal and vertical leadership
- Effective use of self
- Advocacy for patients, families, and the discipline
- Conceptual analysis of the master's-prepared nurse's role(s)
- Principles of lateral integration of care
- Clinical Outcomes Management, including the measurement and analysis of patient outcomes
- Epidemiology
- Biostatistics
- Health promotion and disease reduction/ prevention management for patients and clinical populations
- Risk assessment
- Health literacy
- Principles of mentoring, coaching and counseling
- Principles of adult learning
- Evidence-based practice:
  - Clinical decision making and judgment
  - Critical thinking
  - Problem Identification
  - Outcome measurement

- Care environment management
- Team coordination, including delegation, coaching, interdisciplinary care, group process
- Negotiation, understanding group dynamics, conflict resolution
- Healthcare reimbursement and reform and how it impacts practice
- Resource allocation
- Use of healthcare technologies to improve patient care delivery and outcomes
- Healthcare finance and socioeconomic principles
- Principles of quality management/risk reduction/patient safety
- Informatics principles and use of standardized language to document care and outcomes of care
- Educational strategies
- Learning styles
- Cultural competence/awareness
- Global health care environment, international law, geopolitics, and geo-economics
- Nursing and other scientific theories
- Appreciative inquiry
- Reflective practices

Clinical/Practice Learning Expectations for Master's Programs

All graduates of a master's nursing program must have supervised clinical experiences, which are sufficient to demonstrate mastery of the Essentials. The term "supervised" is used broadly and can include precepted experiences with faculty site visits. These learning experiences may be accomplished through diverse teaching methodologies, including face-to-face and simulated means. The primary goals of clinical learning experiences are the opportunities to:

- Lead change to improve quality care outcomes,
- Advance a culture of excellence through lifelong learning
- Build and lead collaborative interprofessional care teams,
- Navigate and integrate care services across the healthcare system,
- Design innovative nursing practices, and
- Translate evidence into practice.

Mastery in nursing practice is acquired by the student through a series of applied learning experiences designed to allow the learner to integrate cognitive learning with the

affective and psychomotor domains of nursing practice. The clinical/practice experiences allow the learner to experiment and acquire competence with new knowledge and skills. These experiences provide the opportunity for delivery of services or programs of wide diversity and focus and may occur in multiple settings including hospitals, community settings, public health departments, primary care practice offices, integrated health care systems, and an array of other settings.

The clinical experience is an opportunity to integrate didactic learning, promote innovative thinking, and test new potential solutions to clinical/practice or system issues. Therefore, the development of new skills and practice expectations can be facilitated through the use of creative learning opportunities in diverse settings. These learning opportunities may include experiences in business, industries, and with disciplines that are recognized as innovators in safety, quality, finance, management, or technology. Through these experiences, the student may develop an appreciation and use the wisdom from other industries and disciplines in nursing practice that can occur through application of knowledge or evidence developed in other industries.

These learning experiences also can occur using simulation designed as a mechanism for verifying early mastery of new levels of practice or designed to create access to data or health care situations that are not readily accessible to the student. These experiences may include simulated mass casualty events, simulated database problems, simulated interpersonal communication scenarios, and other new emerging learning technologies. The simulation is an adjunct to the learning that will occur with direct human interface or human experience learning.

Development of mastery also is facilitated through the use of focused and sustained clinical experiences, which provide the learner with the opportunity to master the patient care delivery skills as well as the system assessment and intervention skills which require an understanding of organizational dynamics. These immersion experiences afford the student an opportunity to focus on a population of interest and a specific role. Most often, the immersion experience occurs toward the end of the program as a culminating synthesis experience for the program. In some instances, the master's student may engage in a clinical experience at the student's employing agency. This arrangement requires a systematic assessment of that setting's ability to allow the student to engage in new practice activities, framed by the learning objectives of the program, and overseen or supervised by a mentor/preceptor or faculty member. This type of learning experience will be designed to assist the learner to acquire master's-degree nursing knowledge and practice master's-degree roles.

Supervised clinical experiences will be verified and documented. One example of such documentation is the use of a professional portfolio. This portfolio may also provide a

foundation or template for the graduate's future professional career trajectory and experiences.

Summary

The Essentials of Master's Education in Nursing serves to transform nursing education and is critical to the innovations needed in health care. Due to the ever-changing and complex healthcare environment, this document emphasizes that the master's-prepared nurse will be able to: 1) lead change for quality care outcomes; 2) advance a culture of excellence through lifelong learning; 3) build and lead collaborative interprofessional care teams; 4) navigate and integrate care services across the healthcare system; 5) design innovative nursing practices; and 6) translate evidence into practice. Master's degree nursing programs prepare graduates with enhanced nursing knowledge and skills to address the evolving needs of the healthcare system.

Essentials I-IX delineate the outcomes expected of graduates of master's nursing programs. Achievement of these outcomes will enable graduates to lead and practice in complex healthcare systems in a variety of direct and/or indirect care roles. The breadth of knowledge, the extent of experiential learning, and therefore the time needed to accomplish each Essential will vary, and each Essential does not require a separate course for achievement of the outcomes.

Clinical experiences in master's programs are opportunities to integrate didactic learning, promote innovative thinking and test new potential solutions to clinical/practice or system issues. Therefore, the development of new skills and practice expectations can be facilitated through the use of creative learning opportunities in diverse settings. In addition, the extraordinary explosion of knowledge in the healthcare field requires the master's-prepared nurse to have an increased emphasis on lifelong learning and professional development.

Glossary

Administration: Administration comprises working with and through others to achieve the mission, values, and vision of an organization. Administration is an executive function within an organization and has ultimate accountability for defining and achieving the organization's strategic plan. Administration designates responsibility for implementing organizational goals. (Council on Graduate Education for Administration in Nursing, 2010)

Advanced Nursing Practice: Any form of nursing intervention that influences health care outcomes for individuals or populations, including the direct care of individual patients,

management of care for individuals and populations, administration of nursing and health care organizations, and the development and implementation of health policy (AACN, 2004).

Advanced Practice Registered Nurse (APRN): a nurse:
1. who has completed an accredited graduate-level education program preparing him/her for one of the four recognized APRN roles;
2. who has passed a national certification examination that measures APRN, role and population-focused competencies and who maintains continued competence as evidenced by recertification in the role and population through the national certification program;
3. who has acquired advanced clinical knowledge and skills preparing him/her to provide direct care to patients, as well as a component of indirect care; however, the defining factor for all APRNs is that a significant component of the education and practice focuses on direct care of individuals;
4. whose practice builds on the competencies of registered nurses (RNs) by demonstrating a greater depth and breadth of knowledge, a greater synthesis of data, increased complexity of skills and interventions, and greater role autonomy;
5. who is educationally prepared to assume responsibility and accountability for health promotion and/or maintenance as well as the assessment, diagnosis, and management of patient problems, which includes the use and prescription of pharmacologic and non-pharmacologic interventions;
6. who has clinical experience of sufficient depth and breadth to reflect the intended license; and
7. who has obtained a license to practice as an APRN in one of the four APRN roles: certified registered nurse anesthetist (CRNA), certified nurse-midwife (CNM), clinical nurse specialist (CNS), or certified nurse practitioner (CNP).
(APRN Consensus Model, 2008)

Advocacy**:** Defending or maintaining a cause or proposal on behalf of the patient, client, or profession to achieve societal or other goals (Interprofessional Professionalism Collaborative, 2008)

Aggregate(s): A community or a group of individuals defined by shared characteristics such as, age, culture, diagnosis, gender, geography, or values (adapted from Allan et al., 2004).

Altruism: A concern for the welfare and well being of others. In professional practice, altruism is reflected by the nurse's concern and advocacy for the welfare of patients, other nurses, and other healthcare providers (American Association of Colleges of Nursing, 2008, p. 27).

Autonomy: The right to self-determination. Professional practice reflects autonomy when the nurse respects patients' rights to make decisions about their health care (AACN, 2008, p. 27).

Care Coordination: Ensures patients receive well-coordinated care across all healthcare organizations, settings, and levels of care (National Priorities Partnership, 2008).

Clinical Practice: The care of individuals or families, irrespective of setting.

Clinical Prevention: Health promotion and risk reduction/illness prevention for individuals, families, aggregates, or clinical populations (Allan et al, 2004).

Clinical Preventive Services: Screening, vaccination, counseling, or other preventive service delivered to one patient at a time by a healthcare practitioner in an office, clinic, healthcare system, or other practice environment (adapted from Centers for Disease Control and Prevention, 2009). See also Community Preventive Services.

***Community Preventive Services*:** Interventions that provide or increase the provision of preventive services such as screening, education, counseling, or other programs to groups of people, in community settings, healthcare systems, or other practice environments (adapted from Centers for Disease Control and Prevention, 2009). See also Clinical Preventive Services.

Culturally Responsive: Culturally responsive refers to being cognizant of patients' norms, beliefs, language, and behaviors that not only shape the meaning of their health but also their health-seeking and health-related behaviors. The constructs reinforce the idea that each practitioner should be engaged continuously in self reflection about their own personal beliefs, norms, behaviors and language and how together they guide their perceptions, beliefs, and interactions with patients. The culturally responsive practitioner focuses on the importance of building upon each patient's personal strengths as well as available resource and supports which provide the foundational underpinning of these respective strengths. The culturally responsive practitioner also engages in a dynamic, respectful, and reciprocal dialogue with each person irrespective of their race, ethnicity, gender, social position, sexual orientation, immigration status, and educational level (Ring et al, 2009)**.**

Delivery: The planning, management, and evaluation of evidence-based practice and clinical care across healthcare settings.

Direct Care/ Indirect Care:

Direct care refers to nursing care provided to individuals or families that is intended to achieve specific health goals or achieve selected health outcomes. Direct care may be provided in a wide range of settings, including acute and critical care, long term care, home health, community-based settings, and educational settings (AACN, 2004, 2006; Suby, 2009; Upenieks, Akhavan, Kotlerman et al., 2007).

Indirect care refers to nursing decisions, actions, or interventions that are provided through or on behalf of individuals, families, or groups. These decisions or interventions create the conditions under which nursing care or self care may occur. Nurses might use administrative decisions, population or aggregate health planning, or policy development to affect health outcomes in this way. Nurses who function in administrative capacities are responsible for direct care provided by other nurses. Their administrative decisions create the conditions under which direct care is provided. Public health nurses organize care for populations or aggregates to create the conditions under which care and improved health outcomes are more likely. Health policies create broad scale conditions for delivery of nursing and health care (AACN, 2004, 2006; Suby, 2009; Upenieks, Akhavan, Kotlerman et al., 2007).

***Diverse populations*:** Diversity is an all-inclusive concept, and includes differences in race, color, ethnicity, national origin, immigration status (refugee, sojourner, immigrant, or undocumented), religion, age, gender, gender identity, sexual orientation, ability/disability, political beliefs, social and economic status, education, occupation, spirituality, marital and parental status, urban versus rural residence, enclave identity, and other attributes of groups of people in society (Giger et al., 2007; Purnell & Paulanka, 2008).

Ethics: The rules or principles that govern right conduct (Kozier & Erb, 2007).

Evidenced-based Practice: The integration of best research evidence, clinical research, and patient values in making decisions about the care of individual patients (IOM, 2003).

Genetics: Study of individual genes and their impact on relatively rare single-gene disorders (Guttmacher & Collins, 2002).

Genomics: Study of all the genes in the human genome together, including their interactions with each other, the environment, and the influence of other psychosocial and cultural factors (Guttmacher & Collins, 2002).

***Health Disparities*:** Health disparities are differences in the incidence, prevalence, mortality, and burden of disease and other adverse health conditions that exist among specific population groups in the United States (National Institutes of Health, 2002-2006). The definition of health disparities assumes not only a difference in health but a difference in which disadvantaged social groups—who have persistently experienced social disadvantage or discrimination—systematically experience worse health or greater health risks than more advantaged social groups (Braveman, 2006). Consideration of who is considered to be within a health disparity population has policy and resource implications (American Association of Colleges of Nursing, 2009).

Health Education Programs: Any program designed to educate individuals, families, groups, communities, health professionals to improve health outcomes.

Health Equity: A basic principle that all people have a right to health. Health equity concerns those differences in population health that can be traced to unequal economic and social conditions and are systemic and avoidable and thus inherently unjust and unfair (Brennan, Baker, & Meltzer, 2008).

Health Literacy: The degree to which individuals have the capacity to obtain, process, and understand basic health information and services needed to make appropriate health decisions (U.S. Department of Health and Human Services, 2000b).

***High-Reliability Organizations (HRO)*:** Organizations or systems that operate in hazardous conditions but have fewer than their fair share of adverse events (Weick, 2001; Reason, 2001). Commonly discussed examples include air traffic control systems, nuclear power plants, and naval aircraft carriers (LaPorte, 1988; Roberts, 1990). It is worth noting that, in the patient safety literature, HROs are considered to operate with nearly failure-free performance records, not simply better than average ones. These organizations achieve consistently safe and effective performance records despite unpredictable operating environments or intrinsically hazardous endeavors. Some common features of HROs include:

- *Preoccupation with failure*—the acknowledgment of the high-risk, error-prone nature of an organization's activities and the determination to achieve consistently safe operations.
- *Commitment to resilience*—the development of capacities to detect unexpected threats and contain them before they cause harm, or bounce back when they do.
- *Sensitivity to operations*—an attentiveness to the issues facing workers at the frontline. This feature comes into play when conducting analyses of specific events but also in connection with organizational decision making. Management units at the frontline are given some autonomy in identifying and responding to threats, rather than adopting a rigid top-down approach.
- *A culture of safety*—the atmosphere in which individuals feel comfortable drawing attention to potential hazards or actual failures without fear of censure from management (Agency for Healthcare Research and Quality, 2009).

Horizontal and Vertical Health Delivery Systems: Health systems are comprised of a "horizontal system" focused on integrated resource sharing health services, providing prevention and care for prevailing health problems, and of "vertical systems" focused on disease specific interventions for specific health conditions (World Health Organization, 2010).

Human Dignity: Respect for the inherent worth and uniqueness of individuals and populations. In professional practice, concern for human dignity is reflected when the

nurse values and respects all patients and colleagues (American Association of Colleges of Nursing, 2008, p. 28).

Informatics: The use of information and technology to communicate, manage knowledge, mitigate error, and support decision making (Quality and Safety Education for Nurses, 2010).

Integrity: Acting in accordance with an appropriate code of ethics and accepted standards of practice. Integrity is reflected in professional practice when the nurse is honest and provides care based on an ethical framework that is accepted within the profession (AACN, 2008, p. 28).

Interprofessional: Working across healthcare professions to cooperate, collaborate, communicate, and integrate care in teams to ensure that care is continuous and reliable. The team consists of the patient, the nurse, and other healthcare providers as appropriate (IOM, 2003)

***Just Culture*:** This phrase was popularized in the patient safety lexicon by a report (Marx, 2001) that outlined principles for achieving a culture in which frontline personnel are comfortable disclosing errors—including their own—while maintaining professional accountability. The examples in the report relate to transfusion safety, but the principles clearly generalize across domains within health care organizations.

Traditionally, healthcare's culture has held individuals accountable for all errors or mishaps that befall patients under their care. By contrast, a just culture recognizes that individual practitioners should not be held accountable for system failings over which they have no control. A just culture also recognizes many individual or "active" errors represent predictable interactions between human operators and the systems in which they work. However, in contrast to a culture that touts "no blame" as its governing principle, a just culture does not tolerate conscious disregard of clear risks to patients or gross misconduct.

In summary, a just culture recognizes that competent professionals make mistakes and acknowledges that even competent professionals will develop unhealthy norms but has zero tolerance for reckless behavior (Agency for Healthcare Research and Quality, 2009).

Leadership: Leadership is the process of influencing others toward the attainment of one or more goals. Leadership comprises two types: formal and informal. Formal leadership occurs through official titular designations within an organization or society. Informal leadership occurs when the perceptions and actions of others are influenced by individuals without such official organizational or societal designations. Leadership is not limited to the accomplishment of organizational goals (Council on Graduate Education for Administration in Nursing, 2010).

Liberal Education: A comprehensive sets of aims and outcomes that are essential both for a globally engaged democracy and for a dynamic, innovation-fueled economy (American Association of Colleges &Universities, 2007).

Management: Management is the process of aligning resources with needs to attain specific goals. Management includes planning, organizing, motivating, monitoring, and evaluating human and material resources. Although management usually refers to a mid-level formal leadership function within an organization, it is also the process used at any level to align and allocate resources (Council on Graduate Education for Administration in Nursing, 2010).

Metaparadigm: Represents the worldview of a discipline (the most global perspective that subsumes more specific views and approaches to the central concepts with which it is concerned). There is considerable agreement that nursing's metaparadigm consists of the central concepts of person, environment, health, and nursing (Powers & Knapp, 1990, p. 87).

Macrosystem: Actions taken by senior leaders who are responsible for organization-wide performance (Nelson et al, 2007, p.205).

Mesosystem: Actions taken by the midlevel leaders who are responsible for large clinical programs, clinical support services, and administrative services (Nelson et al., 2007, p.205)

Microsystem: Clinical Microsystems are the small, functional frontline units that provide most health care to most people (Nelson et al., 2007, p.3).

Nursing Science: A basic science that is the substantive, discipline-specific knowledge that focuses on the human-universe-health process articulated in nursing frameworks and theories. The discipline-specific knowledge resides within schools of thought that reflect differing philosophical perspectives that give rise to ontological, epistemological, and methodological processes for the development and use of knowledge concerning nursing's unique phenomenon of concern (Parse et al., 2000).

Organizational Science: An interdisciplinary field of inquiry focusing on employee and organizational health, well-being, and effectiveness. Organizational Science is both a science and a practice, founded on the notion that enhanced understanding leads to applications and interventions that benefit the individual, work groups, the organization, the customer, the community, and the larger society in which the organization operates (University of North Carolina, 2009).

Patient: The term refers to the recipient of a healthcare service or intervention at the individual, family, community, aggregate/population level. Further, patients may function in independent, interdependent, or dependent roles, and may seek or receive nursing

interventions related to disease prevention, health promotion, or health maintenance, as well as illness and end-of-life care. Depending on the context or setting, patients may, at times, more appropriately be termed clients, *consumers,* or clients of nursing services (AACN, 1998, p. 2).

Population: Refers to a set of persons having a common personal or environmental characteristic. The common characteristic might be anything thought to relate to health, such as age, race, sex, social class, medical diagnosis, level of disability, exposure to a toxin, or participation in a health-seeking behavior, such as smoking cessation. It is the researcher or health practitioner who identifies the characteristic and set of persons that make up this population (Maurer & Smith, 2004).

Population-based Health: Inclusive of aggregates, community, and/or clinical populations that consider the environmental, occupational, and cultural, socio-economic and other dimensions of health (Allan et al., 2004), and derives evidence from population level data and statistics (Starfield, Hyde, Gervas, & Heath, 2007).

***Professionalism*:** The consistent demonstration of core values evidenced by nurses working with other professionals to achieve optimal health and wellness outcomes in patients, families, and communities by wisely applying principles of altruism, excellence, caring, ethics, respect, communication, and accountability (Interprofessional Professionalism Collaborative, 2008). Professionalism involves accountability for one's self and nursing practice, including continuous professional engagement and lifelong learning. As discussed in the American Nurses Association Code of Ethics for Nursing (2005, p.16), "The nurse is responsible for individual nursing practice and determines the appropriate delegation of tasks consistent with the nurse's obligation to provide optimum patient care." Also, inherent in accountability is responsibility for individual actions and behaviors, including civility. In order to demonstrate professionalism, civility must be present. Civility is a fundamental set of accepted behaviors for a society/culture upon which professional behaviors are based (Hammer, 2003; American Association of Colleges of Nursing, 2008).

***Quality Improvement (QI)*:** In health care, QI refers to giving patients the appropriate care at the appropriate time and place with the appropriate mix of information and supporting resources. In many cases, healthcare systems are overly cumbersome, fragmented, and indifferent to patients' needs. Quality improvement tools range from those that simply make recommendations but leave decision-making largely in the hands of individual practitioners (e.g., practice guidelines) to those that prescribe patterns of care (e.g., critical pathways). Typically, QI efforts are strongly rooted in evidence-based procedures and rely extensively on data collected about processes and outcomes (Robert Wood Johnson Foundation, 2009).

Risk Management/Risk Mitigation: A managed program or effort directed at reducing risk, avoiding accidents, and making effective use of purchased insurance (American Nurses Association, 2009).

Self Mastery: The intentional growth and development of physical, emotional, mental, and spiritual being. It allows for flexibility; comfort with chaos, ambiguity, and uncertainty; and the ability to let go of control. The journey of self-mastery increases our capacity to support and move others beyond fear (Viney & Rivers, 2007).

Social Justice: This concept relates to upholding moral, legal, and humanistic principles. This value is reflected in professional practice when assuring equal treatment under the law and equal access to quality health care (American Association of Colleges of Nursing, 2007). Social Justice is acting in accordance with fair treatment regardless of economic status, race, ethnicity, age, citizenship, disability, or sexual orientation" (American Association of Colleges of Nursing, 2008, p. 28).

Translational research: Translational research includes two areas of translation. One is the process of applying discoveries generated during research in the laboratory, and in preclinical studies, to the development of trials and studies in humans. The second area of translation concerns research aimed at enhancing the adoption of best practices in the community.

Values: Something of worth; a belief held dearly by a person (Kozier & Erb, 2007).

***Vulnerable Populations*:** Refers to social groups with increased relative risk (e.g., exposure to risk factors) or susceptibility to health-related problems. Vulnerability is evidenced in higher comparative mortality rates, lower life expectancy, reduced access to care, and diminished quality of life (UCLA School of Nursing, 2008).

APPENDIX A

Task Force on *The Essentials of Master's Education in Nursing*

Joanne Warner, PhD, RN, *Chair*
Dean, University of Portland
School of Nursing

Lynn Babington, PhD, RN
CCNE liaison
Northeastern University
School of Nursing

Jean Bartels, PhD, RN
Vice President for Academic Affairs
and Provost
Georgia Southern University

Joyce Batcheller, DNP, RN, NEA-BC, FAAN, *practice representative*
Senior Vice President/System Chief Nursing Officer
Seton Family of Hospitals

James Harris, DSN, RN, MBA, FAAN, APRN-BC, *practice representative*
Deputy Chief Nursing Officer
Department of Veterans Affairs

Patricia Martin, PhD, RN, FAAN
Dean, Wright State University
College of Nursing and Health

David Reyes, MN, MPH, RN, *public health practice liaison*
Health Services Administrator
Public Health – Seattle & King County

Julie Sebastian, PhD, RN, FAAN
AACN Board liaison
Dean, University of Missouri-Saint Louis
College of Nursing

Geraldine (Polly) Bednash, PhD, RN, FAAN, *staff liaison*
Chief Executive Officer, Executive Director

Kathy McGuinn, MSN, RN, CPHQ, *staff liaison*
Director of Special Projects

Joan Stanley, PhD, RN, FAAN, *staff liaison*
Senior Director of Education Policy

Horacio Oliveira, *staff liaison*
Education Policy and Special Projects Coordinator

APPENDIX B

Participants who attended Stakeholder Meetings (N=18)

Carol J. Bickford
American Nurses Association
Senior Policy Fellow
Silver Spring, MD

Sandra Bruce
National Nursing Staff Development Organization
Nurse Education Program Manager
Pensacola, FL

Evelyn Calvillo
AACN Cultural Competency Advisory Group
Professor and Associate Director
California State University, Los Angeles
Los Angeles, CA

Michelle Cravetz
Association of State and Territorial Directors of Nursing
Executive Director
Clifton Park, NY

Marjorie Godfrey
Dartmouth Institute for Health Policy and Clinical Practice
Instructor
Hanover, NH

Hollye Harrington Jacobs
End-of-Life Nursing Education Consortium
Project Director
Washington, DC

Mary Enzman Hines
American Holistic Nurses Association
President Elect
Flagstaff, AZ

Jean Jenkins
National Human Genome Research Institute
Senior Clinical Advisor to the Director, National Institutes of Health
Bethesda, MD

Rebecca Jones
Council on Graduate Education for Administration in Nursing
Chancellor & Professor, West Suburban College
E. Lombard, IL

Jean Matthews
Quad Council of Public Health Nursing Organizations
Public Health Program Specialist/Nurse Manager
Wheat Ridge, CO

Deborah M. Nadzam
Practice Leader, Patient Safety Services
Joint Commission Resources, Inc.
Oak Brook, IL

Carmen Paniagua & Kem Louie
National Coalition of Ethnic and Minority Nurses Association
Little Rock, AR

Cecilia Plaza
American Association of Colleges of Pharmacy
Director of Academic Affairs and Assessment
Alexandria, VA

Mary-Anne Ponti
American Organization of Nurse Executives (AONE)
Board Member
Washington, DC

Nancy Specter
National Council of State Boards of Nursing
Director of Education
Chicago, IL

Kathy Stephens Williams
American Association of Critical Care Nurses
Past Board Member
Aliso Viejo, CA

APPENDIX C

Schools of Nursing that Participated in the Regional Meetings or Provided Feedback (N=282)

Allen College
Waterloo, IA

Alverno College
Milwaukee, WI

Anderson University
Anderson, IN

Angelo State University
San Angelo, TX

Arkansas State University
State University, AR

Auburn University
Auburn, AL

Augustana College
Sioux Falls, SD

Aurora University
Aurora, IL

Azusa Pacific University
Azusa, CA

Ball State University
Muncie, IN

Bellarmine University
Louisville, KY

Bellevue University
Omaha, NE

Bellin College
Green Bay, WI

Benedictine University
Lisle, IL

Binghamton University
Binghamton, NY

Blessing-Rieman College of Nursing
Quincy, IL

Boise State University
Boise, ID

Brenau University
Gainesville, GA

Brigham Young University
Provo, UT

California Baptist University
Riverside, CA

California State University-Dominguez Hills
San Rafael, CA

California State University-Fullerton
Fullerton, CA

California State University-Long Beach
Long Beach, CA

California State University-Los Angeles
Los Angeles, CA

California State University-San Marcos
San Marcos, CA

California State University-Stanislaus
Turlock, CA

California University of Pennsylvania
California, PA

Carlow University
Pittsburgh, PA

Case Western Reserve University
Cleveland, OH

Cedarville University
Cedarville, OH

Central Methodist University
Fayette, MO

Chamberlain College of Nursing
Columbus, OH

Chatham University
Pittsburgh, PA

Clayton State University
Huntertown, IN

Clemson University
Clemson, SC

College of Mount Saint Joseph
Cincinnati, OH

College of Notre Dame of Maryland
Baltimore, MD

College of Staten Island
Staten Island, NY

Columbus State University
Columbus, GA

Creighton University
Omaha, NE

Curry College
Milton, MA

Delaware State University

Exhibit I.06: Minutes of the May 15 and 16, 2017 Faculty meeting

AMERICAN UNIVERSITY OF BEIRUT

RAFIC HARIRI SCHOOL OF NURSING

MINUTES OF FACULTY MEETING

DATE AND TIME: May 15 & May 16, 2017 at 9:00 a.m.

PLACE: School of Nursing Conference Room #605

PRESIDING: Dr. Huda Huijer, HSON Director

MEMBERS PRESENT: Mrs. M. Adra, Ms. N. Alayan, Mrs. M. Arevian, Mrs. T. Avedissian, Dr. M. Clinton, Mrs. S. Dakessian, Ms. D. Damianos, Dr. H. Darwish, Dr. N. Dumit, Dr. S. Fares, Dr. L. Farhood, Mrs. T. Gulgulian, Dr. G. Honein, Dr. L. Kantar, Mrs. M. Khoury, Dr. D. Madi, Ms. A. Massouh, Dr. S. Noureddine, Ms. H Tashjian and Dr. L. Younan.

MEMBERS ABSENT: Dr. N. Dumit (absent on the first meeting held on May 15, 2017). None were absent on Tuesday May 16, 2017

First meeting held on May 15, 2017 came to order at 9:00 a.m. and was adjourned at 12:00 p.m. Second meeting (continuation) came to order at 9:00 am and was adjourned

I. APPROVAL OF MINUTES

- Minutes of April 3, 2017: Minutes approved as corrected.

II. UPDATE ON MINUTES

- The three proposals coordinated by Ms. Hera on TS-BSN, MSN Hybrid in Education, and in Administration & Management have been submitted to the Advisory Committee for review and feedback. The three proposals will come to full faculty once they are approved by the respective committees of the School.
- The two plaques of the *Best Graduate Schools* that were purchased are placed on the wall by the auditorium.
- The HSON Director met with five representatives from Al Manaa and staff from the Regional and External Program (REP) and discussed their need for a comprehensive assessment of their current academic programs and administrative services.
- Dr. Huijer met with Dr. El Solh, AUB Medical Center (AUBMC) Director, and discussed restoring the bursaries that used to be provided by AUBMC for nursing students. He promised to discuss this internally and inform us.
- The Career Fair: AUB accepted to advertise for the HSON BA/BS-BSN, second degree program. Flyers were distributed during the Fair.
- HSON received 23 applicants for the Graduate program; 17 were accepted as regular, one on probation and five were not accepted. The HSON request to access incomplete MSN applications was approved.

- The AUB accreditation site visit by the Middle States Commission on Higher Education was conducted using Skype. The submission of the self-study report to the President is December 2017 and the submission to Middle States is March 2018.
- The Promotion & Tenure committee met few times and will be submitting the report soon to the Advisory Committee.

III. DISCUSSION & APPROVALS

A) – Strategic Plan 2017-2022

Task Force Members: Dr. Younan (Chair), Dr. Kantar and Ms. Berbary

Members discussed the plan thoroughly and gave recommendations accordingly. All members approved the strategic plan with the proposed corrections and recommendations.

Motion 2017.01: To recommend the approval of the Strategic Plan 2017-2022 as corrected.

Vote 2017.01: Motion was approved unanimously (19 – 0 – 0)

B) – Business Plan 2017-2022

The Business Plan is still work in progress. Members discussed the plan and gave recommendations. The members noted that student numbers should be aligned with the Strategic Plan. Few changes were recommended and will be integrated.

Motion 2017.02: To recommend the approval the Business Plan 2017-2022 as corrected.

Vote 2017.02: Motion was approved unanimously (19 – 0 – 0)

C) – Revised By-Laws

Task Force Members: Dr. Adra, Dr. Darwish and Dr. Noureddine (Chair)

The By-Laws were modified and aligned with AUB By-Laws for Faculty as per AUB recommendations. Dr. Noureddine briefed the members about the changes and clarified few points. By-Laws were discussed by members and a motion was made to approve.
Dr. Darwish raised few comments regarding changes to the constitution of the committees and the number of advisory committee members, and suggested adding a new continuing education committee, thus she did not approve the motion.

Motion 2017.03: To recommend the approval of the Revised By-Laws.

Vote 2017.03: Motion was approved (17 – 1 – 0)

D) – Organizational Structure

Task Force Members: Dr. Clinton and Dr. Noureddine

The report was introduced and its need and objectives were explained. Members discussed the report and raised some questions. The meeting was adjourned at 12:00 p.m. to resume discussions and approval the next day.
On May 16, all members attended the meeting, and resumed the discussions accordingly. A motion was made to approve the Organizational Chart as corrected.
Dr. Darwish was concerned that the proposed division was too rigid and may not be the best fit based on existing human resources or faculty members' and does not allow to utilize the available resources to their full potentials, thus she did not approve the motion.

Motion 2017.04: To recommend the approval of the Organizational Chart as amended.

Vote 2017.04: Motion was approved (19 – 1 – 0)

E) – Center for Nursing Research

Task Force Members: Dr. Akl, Dr. Darwish (Chair), Dr. Fares and Dr. Honein

Members discussed the Center for Nursing Research (CNR) proposal and a motion was moved to approve.
Dr. Darwish (chair of task force) was concerned that substantial changes were made to the proposed center that reduced the capacity of the center and potentials. The changes were made by additional faculty members and were not discussed with the task force chair prior to incorporation in the proposed document. Dr. Darwish did not approve the motion.

Motion 2017.05: To recommend the approval the CNR proposal as amended.

Vote 2017.05: Motion was approved (18 – 1 – 1)

IV. ANNOUNCEMENTS

- Dr. Dumit announced that the President of the Lebanese University and the Minister of Public Health have approved increasing the number of nursing program branches in Lebanon to include Akkar, Baalbek and Nabatieh in addition to the current locations. Dr. Dumit recommended revisiting our recruitment strategies and asked faculty to share ideas if they have different approaches in recruitment.

Meeting adjourned at 10:15 a.m.

Minutes Recorded by Patricia Assaf Chedid

Exhibit I.07: Minutes of the June 19, 2013 Graduate Faculty Retreat

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE

HARIRI SCHOOL OF NURSING

MINUTES OF GRADUATE FACULTY RETREAT

June 19, 2013

Time and Place: The meeting lasted from 9:00 am to 1:00 pm, Room 605, 6th floor, School of Nursing

Presiding: Dr. Laila Farhood, MSN convener

Members Present: Drs. M. Clinton, H. Darwish, N. Dumit, H. Huijer, S. Noureddine, E. Salameh, L. Younan and Mrs. M. Arevian.

Guests: Dr. Kathy Wood (Duke University, USA), Anthony Shamoun (Chief CNS, AUBMC), Dr. C. Abbyad, (BSN convener).

Order of Business:

Dr. Farhood welcomed the faculty members and the guests.
The members presented their areas of specialty to Dr. Kathy Wood.

1- **Consensus Model for APRN Regulation**

- Dr. Noureddine presented the "Consensus Model for APRN Regulation". Discussions about its applicability at HSON were entertained.

- Dr. Huijer reported that putting the specialty on the MSN degree was already done. Example: MSN in Adult Nursing Care, Psychiatry Mental Health, Nursing Administration or Community Health Nursing.

2- **MSN Track Coordinators Presentations**

a. Dr. Clinton Presented the Administration Track curriculum

The following recommendations were made:

- NURS 500-501 to be combined in one course.
- HMPD 318 3 cr. (FHS): To be an elective course.
- MNGT 332 (OSB): It is an alternate course to HMPD 318

- Dr. Clinton suggested that the students take a 3 credit online course in Health Informatics from recognized Universities in USA. This will increase the credits to 39 credits instead of 36. And also a one course from FHS or OSB as an elective.

b. Dr. Noureddine presented a progress report about the MSN adult care track with number of graduates (8 students presented thesis and 32 projects). She also provided results of benchmarking with 7 universities in the U.S.

Proposed changes in the adult track curriculum: No electives, No NURS 500, change the name NURS 520 to health system course and add an adult Care course (4 credits with clinical) to cover required gerontology content and clinical hours required for certification. As such, the credits will be 37-40 credits instead of 36 or 39-42 credits (in case we keep NURS 500).

c. Dr. Farhood presented Academic Requirements and Curriculum of MSN Psychiatry Mental Health Track at AUB, HSON and five other Universities

Pathophysiology and advanced health assessment were added this year to be in line with the 3ps of the APRN requirements. She presented 5 models for this track from US, Australia and Canada. All programs do not have theory, and some programs have up to 60 credits in this track

d. Mrs. Mary Arevian's Presentation: "Community/Public Health Nursing"

In her presentation Mrs. Arevian reiterated that in Maryland there is no NURS 500-501 also No Physiology, Pharmacology and Pathophysiology in the community track. The total number of credits is 36. APN does not include the community track under its umbrella.

e. Dr. Kathy Wood told the members that most of the universities in USA do not have NURS 500, 501 and the students do not need to do a thesis, project, or comprehensive exam; only certification is required.

Dr. Farhood suggested that in the community track, the students may do residencies in NGOs, WHO, Governmental Lebanese centers, or in public health centers.

3. **Anthony Shamoun's Presentation, Chief APN, AUBMC**

"AUBMC Clinical Nurse Specialist Model – CNS Influence and Outcomes"

- Mr. Shamoun presented the AUBMC CNS Care Delivery Model, outcome measures/indicators, and promotional program.
- AUBMC has 6 CNSs practicing in various clinical specialties, 3 of them hold ANCC and AACN CNS certifications.
- CNSs at AUBMC can be either, CNS1 or CNS2; both levels require a Clinical MSN track, with CNS certification for CNS2.
- Multiple CNS certification exams are available through AMIDEAST
- CNSs meet on monthly basis.
- Reporting channel is Chief CNS as 1st level, Director of Nursing/Head of Division as second level.
- Some CNSs are privileged by medical doctors/divisions for additional competencies.
- CNS need assessment is performed on yearly basis by the Chief CNS, Nursing Director, and Physicians/ Head of Divisions.
- 2014 CNS vacancies: Pediatric acute and critical care, Hematology-Oncology.
- Future areas of interest: Community, Psychiatry, and cardiovascular nursing.
- Mr. Shamoun highlighted the importance of HSON-Order of Nurses coordination in advertising the role of CNSs nationwide in an attempt to provide opportunities to AUB HSON MSN graduates; as AUBMC will not be able to recruit all graduates.
- Questions were entertained.

4. **Dr. Kathy Wood Duke University, APRN Curriculum Model:**

The Matriculation Plan for Family Nursing Practitioner Program (Full Time-Distance based/Online – 2 years) was presented and discussed.
Duke University: The number of master students is normally 500 with 55-58 faculty on board. Students graduate with 45 credits, 816 clinical hours. There is no project, thesis or comprehensive "Only certification".

5. **Discussion and comments on the current programs in light of the presentations**

The following recommendations were made:

1. Combine NURS 500 & NURS 501 as 3 cr. Course (to include ethics)
2. Delete Role Development Course for all clinical tracks (NURS 509)
3. Increase NURS 525 from 2 to 3 cr. Course.
4. A Health Policy course (NURS 527) to be required for all tracks.

It was suggested that track coordinators meet and prepare curriculum plans based on the above suggestions.

Employed and Continuing my Education	2 [11%]	2 [22%]
Caring For Home/Family	2 [11%]	0 [0%]
Unemployed	3 [16%]	1 [11%]
Other	0 [0%]	0 [0%]
If you are not employed, specify the primary reason	**2018-2019 (Count)**	**2020 (Count)**
Unable to find a fulltime job	0	0
Don't desire employment at this time	0	0
Was laid off by the employer	0	0
Quit to find another job	1	1
Other	3	3

Comments about the reason for not being employed:

- 2018-2019: I graduated and traveled to Qatar with the hopes of finding a nursing job, yet I searched for 6 months and no jobs were available since I don't have experience. Moreover, they accepted to take me for an unpaid training for almost 1 year! The training was terrible and the level of professionalism is very low. Hence, I quit nursing, and I'm planning to become a teacher.
- 2018-2019: I wasn't able to take my NCLEX exam to go to the US.
- 2018-2019: In the process of licensure to work in a different country.
- 2020: AUBMC did not employ me after I signed the offer with them, and I am very dissatisfied about it.

VII- Alumni Professional Status and Contacts

Are there any areas, which if included in the School of Nursing curriculum, could have prepared you for better for nursing practice?	2018-2019	2020
Yes, Please specify	8 [42%]	6 [67%]
No	11 [58%]	3 [33%]

Responses:

- **2018-2019:** Developing practical skills during the clinicals. I started my job at the hospital without having any experience with IV insertion. Theoretical knowledge is excellent but stressing on practical skills is also as important.
- **2018-2019:** yes, the maternity course was lacking a lot of information. During my studies for the NCLEX-RN, there is a lot of information we didn't learn in the maternity that I had to learn on my own. Other areas I am not sure yet, because I'm still unemployed.
- **2018-2019:** Increasing clinical hours.
- **2018-2019:** Finding more time to practice clinical skills at floors.
- **2018-2019:** More management courses in undergraduate program.
- **2018-2019:** Apply more clinical practice (inserting IV, withdrawing blood...).
- **2018-2019:** Do clinical rotations in other hospitals
- **2018-2019:** Better clinical practice.
- **2020:** Clinical should be hands on not only case discussions. We would take all our time preparing for case discussions without doing our clinical. We are not accredited in USA, they want us to do CGFNS however we were already accredited.
- **2020:** Clinical Skills.
- **2020:** Clinical Experience.
- **2020:** Cellular signaling; Immunology; and in general going more in depth of the systems and diseases.
- **2020:** exposure to private clinics nurses.

Courses of High Importance

Which courses do you think were of highest importance to you and to your major in particular? And in what ways?

2018

Course	Reason
HUMR 244	• It helped me develop strong theory-based knowledge.
N201	• This is the base of all nursing knowledge and important to acquire.
N202	• This is the base of all nursing knowledge and important to acquire.
N210	• It helped me develop strong theory-based knowledge. • Most properly structured and filled with knowledge, helped me form an interest in specialties. • This is the basics of nursing.
N300	• It helped me develop strong theory-based knowledge. • Teaches you important nursing interventions. • This is the basics of nursing. • Skills and knowledge.
N302	• It helped me develop strong theory-based knowledge. • Teaches you important nursing interventions. • This is the basics of nursing. • Skills and knowledge.
N400	• It helped me develop strong theory-based knowledge. • This is the course that takes you to the next level of nursing care. • Overall understanding of cases improved mostly in this course. • Most important course. It helped me acquire new ways of thinking and made me interested in the critical care field. • Most properly structured and filled with knowledge, helped me form an interest in specialties. • This is the basics of nursing. • This course improved my knowledge and built my character and helped me improve majorly. • This course where you got to know everything. • Skills and knowledge.
N402	• This is the course where you become a holistic nurse.

N408	• This is the course you learn how to prevent the occurrence of the disease. You can reach people and know what the problem is and try to solve it.
N410	• We were able to practice more. • It helped me develop strong theory-based knowledge. • This course improved my knowledge and built my character and helped me improve majorly.

2019

Course	Reason
N201	•
N202	•
N210	• These are foundations for a higher level of knowledge and thinking skills. • This course was the basis of everything. • This course has everything we need to know.
N300	• These are foundations for a higher level of knowledge and thinking skills. • This course was the basis of everything.
N302	• These are foundations for a higher level of knowledge and thinking skills. • This course was the basis of everything.
N400	• This course provides the means to think in a more advanced way, the N400 way. • This course was the basis of everything. • This course has everything we need to know.
N402	• This course helps not only to understand how a patient's "brain" functions but also how the "mind" does and the physiological effects it has and its relation to society.
N411	• Passion and interest lie in this course. • Clinical experiences.
IPEC 300	• This course was beneficial to see and discuss the ways that our fields can collaborate and how they are intertwined.

2020

Course	Reason
N300	• This course provides the knowledge and skills as well as application.
N302	• This course provides the knowledge and skills as well as application.
N307	• This course provides independence on clinical units and the ability to work on weaknesses.
N400	• I wasn't a true nurse until I took the NURS400 course.

	• This course provides the basic theoretical and clinical foundations that are mostly used later on in the domain. • This course provides the knowledge and skills as well as application. • Passion and interest lie in this course. • It brought together all courses and focused specifically on critical illness. • Clinical experiences. • This course helped me apply and relate what I have learned in theory in a real-life experience. • Great scientific background.
N410	• This course provides the basic theoretical and clinical foundations that are mostly used later on in the domain. • Passion and interest lie in this course. • Clinical experiences. • This course provides independence on clinical units and the ability to work on weaknesses. • This course helped me apply and relate what I have learned in theory in a real-life experience. • These courses help us see what a nurse actually does.
N411	• This course provides independence on clinical units and the ability to work on weaknesses. • This course helped me apply and relate what I have learned in theory in a real-life experience. • These courses help us see what a nurse actually does.

Courses of Less Importance

Which courses do you consider as less of importance or of no importance? And why?

2018

Course	Reason
N200	• It can be integrated with N201. • The course was too generic and slow paced. • The course is very simple and its concepts were very abstract, it could have been grouped with the NURS 201 course. • We did not learn anything.
N203	• It had very minimal contribution to my nursing knowledge/ activities. • We did not use any of it in our undergrad degree. • The course could have easily been merged with research.

N304	• This should be an elective course.
N306	• This should be an elective course.
N402	• Psychiatry exams do not meet objectives of the course. Clinicals are so much and somewhat non-beneficial like OPD visits. There are too many assignments. It is not worth 5 credits unlike critical care which does! • This was a waste of time because you study a lot and don't remember anything at the end.
N404	• Research was more on a Masters level or non-clinical practice. They had us do a midterm, final exam, a research paper, and a presentation, which all of these things are unheard of in a research intro class. The normal research intro class is one midterm and a final paper. • We did not learn anything. • This was a waste of time because you study a lot and don't remember anything at the end.
N406	• Informatics was only about computers and not nursing and felt completely useless in the field. • Informatics wasn't useful because we didnt see direct applications of it.
N408	• We did not learn anything new.
IPEC 300	• We did not learn anything new.
SOAN 201	• The material learned where mentioned in community nursing again it was very redundant.

2019

Course	Reason
N200	• It didn't add to my knowledge anything new. • The way this course was given made it seem useless. • This course was not well-tailored, it was a "waste of time, energy and money", did not help us retain any important information.
N203	• Useless course and we did not learn new info important for my major. • It didn't add to my knowledge anything new. • No direct impact on the overall nursing competencies. • This course was not well-tailored, it was a "waste of time, energy and money", did not help us retain any important information.
N304	• Tough clinicals for male students.
N404	• We did not learn much or how we can apply what we learned in our area of practice. • I still don't know why I took the course or what I was supposed to have learned. • I did not learn neither enjoyed the course.

	• Useless course and we did not learn new info important for my major. • Useless in the presence of EPIC. • It wasn't applicable to our nursing education. If they had incorporated EPIC in our training it would have been helpful. • It didn't add to my knowledge anything new. • It doesn’t apply to what we’re learning. • The way this course was given made it seem useless. • Although nursing informatics is an important topic, but some aspects of the course were not relatable, or maybe could have been given in other ways and made more applicable. • This course was not well-tailored, it was a "waste of time, energy and money", did not help us retain any important information.
N408	• It has almost the same information throughout the semester, and the rotation is not significant. We could have benefited more if we rotated with different NGOs and participated in volunteering activities because we have something to do every time. In the Primary Health Care Centers, we do NOTHING sometimes, or if done, it's not significant at all. • Useless course. • The course was very poorly structured and by the end of the semester it really didn't feel like we gained much from it. • The course was not well organized and the information was not delivered in a clear way. • It didn't add to my knowledge anything new. • The course wasn't able to help me gain interest in the field.
IPEC 300	• I did not learn neither enjoyed the course. • Useless course and we did not learn new info important for my major

Additional Preferred Courses

Would you like to have any other courses offered? Please specify:

Year	Course
2018	• Courses for us as students to relieve all the stress and tension we go through during our BSN years. • Microbiology needed a lot of improvement and more focus on Biochemistry which I really enjoyed taking. • A course that helps to prepare students to get out into the community by teaching them where/how to find different job opportunities and their methods, written assignments (how to compose a CV, cover letter, legal documents), how to prepare for interviews... etc. • CPR and Basic Life Support

	• Legal, Ethical & Professional Practice Issues course • Introduction to Nutrition • Clinical Ethics • More Intensive Practicum • Bioethics as a requirement • Global Health Care • Genetics
2019	• More variety in electives • Nutrition • Physical Therapy • Trauma care course • First Aid
2020	• Trauma • Pharmacology • Research

Unnecessary Prerequisites

As you know some courses have prerequisites, do you think that any of the prerequisites should be removed? [Comment]

Year	Course
2018	• PSYC 210 as prerequisite for NURS 306. • SOAN 201 • PSYC 210 was incredibly useless since most of the vital information to us was already found within the courses we took in nursing. • Biochemistry should not be a prerequisite. • Microbiology should not be a prerequisite. • Biostatistics course should be offered exactly the semester before the research course and not a year before.
2019	• NURS 200 should be removed or implemented into other courses since it is only targeting general knowledge which can be explained in other courses. • Biochemistry and Microbiology: should not be prerequisites because the material is independent from other courses. The important information we learned during clinicals. • PSYC 201 and 210 should not be related to NURS 402 because they are totally different courses. • Sociology for community.
2020	• The prerequisite system is oppressing the student who fail a course and need to wait a whole year to redo it.

	• The prerequisite thing is unfair and stressful. It makes you wait for a whole year in order to take the repeated course. This is so unfair! • The practicum for the critical. • Psychology courses are useless. • Pharmacology and microbiology. • SOAN 201 for the community nursing course. • PSYC 201 and 210 before Psychiatry. • Sociology and psychology as prerequisites to community nursing and pediatric nursing respectively. • PSYCH prerequisites for the pediatrics course.

Comments and Feedback

From your own experience with BSN, do you advise any of your friends to go into the same major?	2018	2019	2020
Yes	**18** [58%]	**21** [72%]	**23** [56%]
No	**7** [23%]	**3** [10%]	**10** [24%]

Reasons for a *Yes Response*

2018	• It is very beneficial and let us deal in a proper way with clinical problems. • Because it is a great major for us to prosper in. • I would only suggest Nursing if the person actually likes it. Nursing is a selfless and humanitarian major that I love for its purpose but in relation to studying and courses, there was too much pressure and too much effort. And to those who do not want to give from their heart and mind to nursing genuinely I would think it is better if they thought of other majors. It seems my answer is between yes and no. But in fact, an ethical and humanitarian major like nursing was not made for everyone. • I am personally satisfied with my experience at AUB. • Nursing profession is the best experience that can a person have. • It helps you to see everything from a different perspective and help your community. • Because of the importance of this major. • Interesting, detailed, and holistic major. • I learned a lot and I achieved a lot within the scope of my undergraduate years. • It is a humane and a beautiful major. • Demanding but rewarding. • Yes, because it was interesting, filled with knowledge and practical experiences. • If they love nursing and they have the responsibility and are able to face a lot of challenges i would encourage them because those are the qualities that a nurse should have. • It is a humane and beautiful major. • Studying BSN at AUB was a very wonderful experience. • Rewarding
2019	• It's a major that helps a person understand another human being in a holistic manner and different modes of delivery of care that best suit that individual

	• It is a humanitarian major that is very much needed everywhere around the world. I advise anyone who likes to help others and who is into the medical field to study nursing. • But only if they are fully aware of the courses and issues that they're going to be faced with • Because it is a really important major that everyone should know about and that we have to change the wrong mentality people have about nursing • Nursing is an important, well-respected, and well-paid field in some parts of the world • If they love nursing they will succeed, if not they should not put it as an option • Although it is very hard and demanding at the end it is worth it • Nursing is a very special major, a hard one in which only unique and talented people succeed, and through which you learn life lessons by dedicating your own life to the care of others. • I would advise them to incase the like such thing otherwise i would not • The major is beautiful, but the AUB BSN program definitely has its shortcomings • Nursing is a great job • Only if they understand the important of taking full care of the patients and if they enjoy healthcare and are hardworking students that are studying not only for a degree but for an entire passionate career • Nursing is a rewarding profession and it teaches you responsibility. • I liked it
2020	• It was a great experience. Regardless how hard or underpaid the domain is in **Lebanon**, it was a great opportunity for **self growth**, maturity, and responsibility. I never regret starting my career with nursing because i believe that once you made it out of nursing school you can always thrive for higher ambitions. (Masters, other additional majors) • It is a good career choice in the short term. • It teaches you about more than just science and challenges you as a person to grow in many aspects. • Nursing is a beautiful experience however this goes back to the person's preferences • Because it is a life changing • BSN program is quite tough but also fruitful, RNs graduating from AUB will always be needed. • To always be well prepared and to overcome one obstacle at a time • Its nice :) although its very stressful • i personally like this major ever since registering to it, i even enjoyed my time despite the hardships • since nursing is the blessing of the humanity, especially in HSON you can feel that atmosphere from faculty and students • but not in Hariri school of nursing. we are treated as school students not university our opinion doesn't matter and we never reached anywhere when any inconvenience happens. • It is the most ethical and decent thing anyone can do

	• If they are REALLY into nursing, otherwise no, it is too exhausting and draining for someone who might not be all about this major • I would recommend this major to someone who is caring and who loves to be a nurse otherwise I won't because it's hard to be a nurse when you don't love your profession. • It depends on what they like • Nursing is an act of humanity and holistic care to patients so yes i would recommend nursing to my friends. • Simply put, "the best way to find yourself is to lose yourself in the service of others" and I see no career better fit to do so than Nursing. It is a noble and rewarding path.

Reasons for a *No Response*

2018	• The program is extremely overwhelming and the professors are extremely unsupportive. • Majority of things are in Arabic. • Because of the way instructors treat students. • Because nursing should not be taught in 3 years, it is very stressful, and you don't enjoy your undergraduate student experience while studying nursing. • As much I love nursing, I think the Lebanese situation and attitude towards nursing has to change in order for the graduates to be happy. • Because some doctors are not professional at all however, they teach us how to be. They are not supportive unless you are an excellent student or you are one of their advisees. A lot of them do not respect that life can be miserable at some point and say that it is our responsibility.
2019	• Very stressful experience, very demanding, as a job it is not rewarding. • Too much stress, totalitarian system, no freedom in anything, intensive syllabus, doesn't abide by AUB main campus rules.
2020	• It was so tough. The spirit is bad. More pressure than knowledge. Some instructors made the experience really bad. • Hectic emotionally. • No I honestly don't, mainly due to the tuition and economic instabilities the university is facing (with talks about and equivalence of 3000 to the $). • The major provides us with many useful information. however, our work is underrated in Lebanon. • Since it is stressful. Passing grade is 70 and there is OSCE and you need to wait for one year to repeat a course. • It was so tough. The spirit is bad. More pressure than knowledge. Some instructors made the experience really bad. • Because it is tough. I always thought it was easy to be a nurse until I got enrolled myself in HSON and turned my life into hell first 2 years. I was mostly lost. Just studying because I have to. I was always tired and felt that no one cares about it. I was always afraid of speaking up regarding how tired I am because as a nurse we were always expected to be fully ready

	for anything! Like okay we get it we are first line of defenses but if we are not being taken care of then we can't learn how to help others. Nursing doesn't care if one of us has a mental disorder, actually HSON bails on such students, in addition to their indifference to if their students have body image problem and cannot fully comply with the hospital rules and policies! I am a nursing student and am I at the hospital to learn and practice. When I decided to be a nurse, I didn't know there are certain looks I have to follow in order to look as they define "neat". Very offensive to say this. Very neglectful forgetting that we are students and not getting paid for each 9 hours we spend learning. And supporting patients. • Because nursing student are never treated like the rest of students. it always felt like i belong to another world that isn't the sane one as the rest of the university. in addition, nursing school has to work on its own rules, regulations, and communication with studetns with the least possible judgment.

Favorable Comments

What are your overall favorable comments about the Nursing Program?

2018	• It is well developed and targets several areas of knowledge • Some of the professors were empathetic and encouraged English in class and the few friends I made. Also, I did get to live abroad and learn a little bit of the Arabic language. But overall I am happy to be leaving. • I remember Dr. Dumit saying that in order to be a leader you have to be a servant first and that saying became one of my beliefs and I also believe that is where the soul of nursing care lays. • You feel like u belong to a unity, 1 group that is cohesive . • Amazing focus on ethical issue, evidence-based practice, focus on theoretical competency, focus on patient centered care. • Many faculty members and staff made my experience special in how much they care and the amount of support they offered me. • Very professional, very well structured • The clinical setting exposed us to a lot of people of different ages and different backgrounds. It made us more mature than others. • The program taught me leadership skills and improved my communication skills. It changed me allot. • Best university to learn theory. • Everything was good.
2019	• We are all a lovely family □ • The program introduced me to a new world of patient care. • We became like a family • It is clearly organized • Well ordered

2020	• The only thing that made me survive it is having my friend around. • Thank you for a constructive university experience • Interesting. • It was tiring and hectic yet I learned a lot. • It is amazing, we worked hard and we deserve this degree • Good in theory • the clinical experience and when i started connecting theory to practice • I loved the nursing program and never regretted about it • To be honest, inconveniences that happened taught me how to become more independent and deal with issues on my own. Not to rely on anyone. The program itself enriches you with the knowledge you need in nursing only. We graduate weak in skill performance. • A wonderful learning experience for someone who loves the medical field and loves to learn. Organized and well-planned program. Courses are very interesting For the most part with very kind and considerate instructors. • I feel the nursing school provided me with all the basics I require to continue my journey to become an amazing nurse. • Humanitarian. • Organized and Well-structured program; Astounding faculty members with such profound knowledge of their respective fields, compassion for students, and most importantly inspiring passion for nursing that would make anyone want to pursue this worthwhile path. • It has helped me grow on all levels. it has helped me even learn how to challenge my professors.

Unfavorable Comments

What are your overall unfavorable comments about the Nursing Program?

2018	• It is HECTIC! and no way to vent our stress. • English is not implemented enough. Several professors speak Arabic in class or encouraged students to speak Arabic. This is not a good program for foreigners who are not fluent in Arabic. • Too much pressure. Too little time. But when we look back, we have no idea how we got here. Nevertheless, it was all worth it. But seriously, too much pressure. • Instructors expect students to know information that was not covered in the introductory courses. • The materials taught in some of the courses were not organized (maternity, pediatric courses). • The program doesn't consider international students. • It is a very condensed program that does not give the students enough time to study and grasp the materials that are taught. The consecutive semester without enough breaks leads to physical, emotional and mental burnout. • We need more clinical experience, better evaluation systems, synchrony between professors of the same course, lack of nutrition course. • The workload and the lack of social life that students undergo because of the number of assignments and deadlines they have to meet. • The pediatric course has a lot of room for improvement; I don't feel like I can be a competent pediatric nurse with the little knowledge that I have. • Most of the courses have exam questions that are not analytical but were never in the slides or discussed in class. Those are the questions that often everyone gets wrong. • Sometimes too stressful and demanding. The students aren't always defended properly. Sometimes the exams were too difficult. The consideration for our time and energy level wasn't always the best. • It is a very hectic major especially during junior year. • I wish it was more considerate to its average students who do not show extremely high GPA and encourage them the same way they encourage the top students. • Some professors should be more professional and have the sense of empathy with student.
2019	• We we're not allowed to review our exams. • Some courses were very unorganized and prepared from a very long time ago, they need to be updated and more organized. • I prefer if it was 4 years insisted of 3 since they are so condensed and tiring. • HSON is unprepared for foreign students. • Very overwhelming, some courses should be removed. • Some instructors should retire because we are moving forward not backward. • AUBMC should treat us equally to medical student.

	• More clinical hours because once per week is not enough, we need to get exposed to cases and work communication skills. • Very demanding and affects your like until you graduate. • There is a very clear difference between professors at HSON. Many professors still use outdated slides and information, while other professors share up to date research with us. For example, in pathophysiology, pediatrics, and critical care, we were given information that was based on the latest research, and the professors would tell us what new research findings are in their respective fields. However, in other courses, like community and maternity, the PowerPoints were old (the dates on the PowerPoint were from years ago), and these professors wouldn't mention research and they couldn't always provide us with up-to-date information. This led to discrepancies between courses and the quality of the information we were learning in these different courses. • There should be no summer courses. • I think the students can use a little more guidance and support. We were often found looking for help from graduates or other students as tutors or has guides for help, rather than looking for help from our professors. • As a second-degree student it would have been very helpful if there was an accelerated program. Having to go to school for another three years was time consuming, especially the first two semesters when I it took 2 courses each.
2020	• Not flexible. • Very strict faculty. • Negative work and study environment. • Stress • Need to get new blood in the school. • Need to focus on clinical skills to be equally strong in both theory and clinical expertise. • It is in a sense squeezed and hard, too much stress, some courses should not be given together because they are heavy together as workload. • Bias • From my experience, how the schools deal with problems that arise. Very poor leadership skills in the administration and some professors. • There's some favoritism going on in some situations (practicum I, registration...) but other than that everything was fine. • They only care about grades, passing or failing and mostly the patient.

Recommendations

What are your future recommendations concerning the program?

2018	• As faculty, the program should NOT only focus on GPA students! Rather focus on the overall performance of students especially on clinical areas because straight A student lack communication skills the MOST but they are more appreciated because they have higher

	GPA, which is not fair or effective. The program should look in depth into students' abilities because some are not taking their chances effectively. Plus, awards should NOT be based on who applies to them, faculty should choose independently who gets awards based on their OVERALL evaluation of each student and by overall, I mean all aspects of students' abilities! • I have no comments except to try and make the program less pressuring that's all. • Nursing should be learned in four years and not in three because it is stressful for students. • Make the program a 4 year program without summer courses. • Get instructors and professors that support their students. • Decreasing the workload is not an option however increasing the semesters can be done. Instead of making it a 3 year (2 summers) program it should be a 4 year program so we can benefit from the summer for hands on experience for example. • Focus more on clinical experiences. Be realistic with your expectations of us. We need career coaching ASAP. There should be a full event for graduate students to meet former grad students who have pursued different paths in nursing. We need guidance in terms of career development and graduate studies. Were extremely behind in this. • Include more clinical rotations in other hospitals. • Increase the clinical exposure more if you can. • The electives courses were really hard because we could not find easy one especially because of time conflict with our major courses.
2019	• Give courses more time so that the students can absorb the information rather than memorize them on the spot and forget them later on. • Divide the program into blocks, the theory then clinical in each block. • Pathophysiology should stay in summer with Dr. Massouh because it is the basis of medsurg courses. the students will be overwhelmed. some instructors are not fair. • A lot of classes have very old slides and teaching slides like community and maternity (specific section) this should be modified. since these courses are really very important and educational but they are not presented in the right way in my opinion. • Listen to the students' struggles and try to fix them. • No summer courses is highly recommended. • Be accurate when you talk about jobs for Palestinian. • Do assessment for instructors and teach them to be assertive and supportive.
2020	• To become more flexible with students. • I would suggest that the faculty members and the students be more connected. • Some courses should be adjusted, more focus on clinical work. • There is a barrier between students and faculty at some point where students feel like they are subjected to discrepancy. This communication cycle should be altered and enhanced. Internships in other hospitals should be an option, especially that we are not exposed to different systems. The curriculum should be revised as well. • Expanding the program for 4 years instead of 3 years.

	• Some professors aren't well equipped to be teaching a class. Some of them need to be changed with younger youth as we need to keep up with the change around the world. • I already recommended having the biostatistics and research course of close proximity. • Please listen to students and try to make them feel accepted to raise concerns. • Please care about students more and give chances. Bear with students!

BSN Satisfaction Survey Report 2018-2020

IX. Comments and Feedback

Below are the general comments students had about the program which may help us improve it.

Year 2018 Themes	**Comment**
General	• Nursing is a precious profession, honestly. Studying nursing care should be an enjoyable and enriching experience. The experience I had was definitely enriching, no doubts there. But it was too pressuring and so many times I contemplated giving up because of the pressure. But through nursing I also learned to always look forward and move forward and not backwards and that is why I carried on every single time. I apologize for the lack of recommendations but I only hope the best for this major and hope for its improvement and prosper over time. • There are a few issues related to advising and course logistics that we have brought up over and over again but it seems that nobody has taken any action.
Curriculum	• Offer nursing courses both semesters.

	• Grades aren't everything! Give chances to students to gain extra credits if their clinical performance is good. It is unfair if they failed and lost scholarships just because of a grade. Some people are bad at testing! • I really like how some instructors are really interested in your success, but I wish there were less workload. I got really tired and didn't enjoy any material I was taking. If I had time I would have studied better. Please take this into consideration if you are interested in our mental and physical health. • The timing of courses is really not good because we cannot take electives. • The program given is quite interesting and full of knowledge and facts yet too much given in a short time. • We cannot skip classes every time we have an evening shift. From the beginning of the semester, they should tell us about the registration and the clinical rotations to know what to take although they don't have choices because of the timing. • Registration of humanities courses was really horrible; I was obliged to take courses that were harder than all major courses together because I did not like it but did not find anything to take. • Overall, it was a good experience. The school is competent and gives important information in regard to nursing concepts, theory, EBP, and ethics. The evaluation system is a bit superficial since it is only about grades.
Faculty and Preceptors	• Preceptors are too mean and unsupportive. • Some faculty are biased. If you can adjust the clinical evaluations to be individualized. the comments are hunting us from the first semester till we graduate some people do show improvements. • We should have more supportive environment when in clinicals. • OSCEs should NOT be done for every course. It simply doesn't make sense to have an OSCE for a maternity course, or even a pediatric course. • Some of the professors just don't care about their students, some don't feel entitled to do their job (advising, answering questions ...) some are subjective towards students.
Facilities	• Please open up the old entrance to save us some time to go to SML and then come back to nursing. • The computer lab should be updated with new computers because we are waiting a lot and at the end the computer is not working so we have to change it and it is not acceptable especially if we are in a hurry. • The school of nursing should not close early and classes should always be provided to students because we spend all the time there so we really need a place to study knowing that sometimes it is hard to study at home. • Change and upgrade the nursing school because it can't accommodate our numbers.
Clinicals	• Our clinicals are very narrowed because of rules and the privileges given to students from other universities. • Allow us to do evening shifts in leadership, or 12-hour shifts when applicable. 7 am 3 times per week for 9 weeks can't possibly be healthy!

	• We lack more clinical experience. We should be more exposed to clinical practice before we graduate. Nutrition is important.

Year 2019 Themes	Comment
General	• I love my university.
Curriculum	• Every course is a prerequisite to another one, and then every course is given once a year, so if you fail with one you have to wait for a whole year, at least if its prerequisite, the course should be given every semester. • The workload is very heavy. May be the major can be extended to 4 years or the schedule of the courses can be changed. • Find a way that NURS 200 [Introduction to Nursing] introduces NURS 203 [Biostatistics] which in turn introduces NURS 406 [Nursing Research]. It would be much beneficial in promoting research education. • Update course content especially maternity and pediatrics course; the content is very old and not given in a scientific and comprehensive way. • The exams are often not reflective of our knowledge. quite often, the exams include questions that we have never heard of [especially 201, 202, and 402]. I understand you want us to use critical thinking, but we first have to be tested for a base of knowledge before critical thinking. • Relate NURS 200 to 203 to 406 [research wise] and teach advanced research skills right from the beginning [NURS200]. • Tests are not comprehensive, and quite often grades are not reflective of knowledge. • The organization of courses should be better. A lot of courses require less time, others require more time and need to be placed in different places (like pharmacology). The workload is heavy on students.
Faculty and Preceptors	• I appreciate all my faculty members. • Faculty members are encouraged to work on their lecturing skills, because quite often they just explain whatever is in the book. we know how to read and how to research, but what we really want from the lectures is relating theory to practice and sharing clinical experience. • Update content of the courses, especially maternity and pediatrics. • Faculty members are encouraged to relate theory to practice and give examples of clinical experience.
Facilities	• The student lounge where we eat, rest, and have our lockers is really miserable compared to other faculties. It smells so bad and it is not cleaned on a daily basis. I think nursing students deserve a better environment to relax in. The computer lab closes very early while we have a lot of work, printing, and assignments to do which is inefficient. I would recommend to keep it open for more time. Also, for studying spaces, I think doing a classroom or small library in HSON for nursing students would be a huge project but a very beneficial one to consider. since most of the time we don't find a place to study in SML and other libraries are too far from HSON. • Let HSON remain open after 7 pm especially during finals.

	• Renovate the students' lounge in the basement floor.
Clinicals	• We need more hands-on practice and guidance as well as patience. • Revise the way the community course is given. the rotations in some centers are good, and others are not beneficial. Moreover, the content of the lectures is all old and does not contribute to our learning experience nor does it promote our thinking. •

Year 2020 Themes	**Comment**
General	• I love my university. • My faculty's response to the COVID-19 pandemic has been utterly disappointing. • Online registration process is hectic and students keep fishing for courses.
Curriculum	• Tests are not comprehensive, and quite often grades are not reflective of knowledge. • The organization of courses should be better. A lot of courses require less time, others require more time and need to be placed in different places (like pharmacology). The workload is heavy on students. • Relax the curriculum better by not restricting it to 3 years only if you are receiving financial aid or not. • It would be better having free electives than free humanities. We can have a minor if you allow us to take courses that we want instead of forcing us to take humanities. • Remove any unnecessary material from the program because all new students are finding it hard to be able to focus on the material knowing from older students that they will not be using them. Plus, it is a waste of money and time for everyone. • Replacing humanity courses with free electives (or other attributes; giving us more choices) would be great. It would allow us to choose courses we are passionate about and would make the process of pursuing a minor much easier. • The program is amazing but i would like to say that in the sophomore year there are some courses that we took that offer irrelevant topics to nursing that we won't need after finishing the course which make our workload pretty heavy...
Faculty and Preceptors	• The faculty should look more into the problems that students have, specifically when the students talk to them about it, sends numerous emails about it, and is still left with no answer. They should also work on the availability of the class prior to registration day, as well as securing the financial aid they promised students during their interview prior to the acceptance. Otherwise, they're doing the best they can in these times of crises. • HSON, in my opinion, is the best faculty in AUB. Professors and advisors treat us like we are their own. Thank you for all your efforts.
Facilities	• Please provide the students with study places that are available 24 hours. • It would be of great appreciation if more places in HSON could be turned into studying rooms to provide students with a place to study in between classes.
Clinicals	• Do the theoretical courses first than the practical (hospital shifts) separately since the workload is a lot.

X- Comments and Feedback

Favorable Comments

Year	What are your overall favorable comments about the Nursing Program?
2020	Needs to be more focused on public health
	Helped me grow intellectually and professionally
	This program taught me how to adapt to difficult situations and deal with many people that are very challenging and hard to deal with. It increased my knowledge and connection base. It developed my leadership skills as well.

Unfavorable Comments

Year	What are your overall unfavorable comments about the Nursing Program?
	Too broad. Not focused

2020	Please tell the professors to grade the students according to the students' performance. Not by how much they love or hate the students. I have had a terrible relationship with one of the professors that treated me unfairly.

Recommendations

Year	What are your future recommendations concerning the program?
2020	Improve the community courses. Totally useless
	Increase the number of tracks.
	The clinical practicum should be assigned to people who are getting paid to do this job. My practicum of Nursing 505A was not as expected. The CNS that I was appointed with did not expose me to the role of the CNS.

80-84	1 [20%]
85+	4 [40%]

IV- General Satisfaction Measures

To what extent were you satisfied or dissatisfied with the following?	2020
The program overall	**%**
Extremely Dissatisfied	20
Dissatisfied	0
Satisfied	80
Extremely Satisfied	0
Total = % Satisfied + % Extremely Satisfied	**80%**
The extent to which courses challenged your thinking	**2020 %**
Extremely Dissatisfied	20
Dissatisfied	0
Satisfied	60
Extremely Satisfied	20
Total = % Satisfied + % Extremely Satisfied	**80%**
The quality of the content of courses	**2020 %**
Extremely Dissatisfied	20
Dissatisfied	20
Satisfied	60
Extremely Satisfied	0
Total = % Satisfied + % Extremely Satisfied	**60%**
Please indicate how much you agree or disagree with the following:	**2020**
The workload is too heavy	**%**
Strongly Disagree	0
Disagree	40
Agree	40
Strongly Agree	20
Total = % Agree + % Strongly Agree	**60%**
The readings given are relevant to the courses	**2020 %**

Strongly Disagree	0
Disagree	0
Agree	80
Strongly Agree	20
Total = % Agree + % Strongly Agree	**100%**
The required textbooks are used enough to justify their purchase	**2020 %**
Strongly Disagree	20
Disagree	40
Agree	40
Strongly Agree	0
Total = % Agree + % Strongly Agree	**40%**
The courses meet my expectations	**2020 %**
Strongly Disagree	20
Disagree	20
Agree	60
Strongly Agree	0
Total = % Agree + % Strongly Agree	**60%**

V- Instruction Assessment

How would you rate the items related to instruction below?	**2020 %**
The quality of teaching provided is	
Poor	20
Fair	20
Good	20
Excellent	40
Total = % Good +% Excellent	**60%**
The size of the class	**2020 %**
Poor	0
Fair	0
Good	80
Excellent	20
Total = % Good +% Excellent	**100%**
The faculty's provision of effective feedback is	**2020 %**
Poor	0
Fair	20
Good	60

Excellent	20
Total = % Good +% Excellent	**80%**
Modes of teaching delivery (blended, face to face, etc.) are	**2020 %**
Poor	20
Fair	20
Good	40
Excellent	20
Total = % Good +% Excellent	**60%**
To what extent were you satisfied or dissatisfied with the following?	**2020 %**
The availability of faculty to discuss course issues outside class	
Extremely Dissatisfied	0
Dissatisfied	0
Satisfied	50
Extremely Satisfied	50
Total = % Satisfied +% Extremely Satisfied	**100%**
The Faculty assistance in improving my academic performance	**2020 %**
Extremely Dissatisfied	0
Dissatisfied	0
Satisfied	75
Extremely Satisfied	25
Total = % Satisfied +% Extremely Satisfied	**100%**
To what extent were you satisfied or dissatisfied with the following?	**2020 %**
The clinical experiences are enriching	
Extremely Dissatisfied	0
Dissatisfied	0
Satisfied	80
Extremely Satisfied	20
Total = % Satisfied +% Extremely Satisfied	**100%**
Clinical preceptors meet my expectations	**2020 %**
Extremely Dissatisfied	20
Dissatisfied	0
Satisfied	60
Extremely Satisfied	20
Total = % Satisfied +% Extremely Satisfied	**80%**

VI- Advising Assessment

To what extent were you satisfied or dissatisfied with the following?	2020
The quality of advising	**%**
Extremely Dissatisfied	0
Dissatisfied	40
Satisfied	20
Extremely Satisfied	40
Total = % Satisfied +% Extremely Satisfied	**60%**
My adviser's knowledge of the whole process of advising	**2020 %**
Extremely Dissatisfied	0
Dissatisfied	20
Satisfied	40
Extremely Satisfied	40
Total = % Satisfied +% Extremely Satisfied	**80%**
The amount of time spent with my adviser	**2020 %**
Extremely Dissatisfied	0
Dissatisfied	40
Satisfied	20
Extremely Satisfied	40
Total = % Satisfied +% Extremely Satisfied	**60%**
The availability of my adviser	**2020 %**
Extremely Dissatisfied	0
Dissatisfied	0
Satisfied	60
Extremely Satisfied	40
Total = % Satisfied +% Extremely Satisfied	**100%**
My adviser's follow up on my academic performance	**2020 %**
Extremely Dissatisfied	0
Dissatisfied	20
Satisfied	40
Extremely Satisfied	40
Total = % Satisfied +% Extremely Satisfied	**80%**

VII- Overall Experience

Please rate the following: The recruitment and Admission process	2020 %
Poor	0
Fair	40
Good	40
Excellent	20
Total = % Good + % Excellent	**60%**
The orientation process	**2020 %**
Poor	0
Fair	40
Good	40
Excellent	20
Total = % Good + % Excellent	**60%**
The registration process	**2020 %**
Poor	0
Fair	40
Good	40
Excellent	20
Total = % Good + % Excellent	**60%**
How do you consider your overall experience at the Rafic Hariri School of Nursing at AUB?	**2020 %**
Extremely Not Satisfying	0
Not Satisfying	25
Satisfying	75
Extremely Satisfying	0
Total = % Satisfying +% Extremely Satisfying	**75%**
If you had the chance to decide to enroll at the university again would you choose AUB?	**2020 %**
Definitely would not	20
Probably would not	20
Probably would	20
Definitely would **Total = % Probably would + % Definitely would**	40 **60%**

VIII- Key Performance Indicators

MSN Satisfaction Survey	2020
Response rate	9%
Overall Satisfaction	**80%**
Satisfaction with instructions	**77%**
Satisfaction with advising	**76%**

IX- Comments and Feedback

Year	We would welcome any general comments you may have about the program which may help us improve it (either positive or negative)
2020	Add more tracks to the Master's program. I could not do residency I wanted outside Lebanon.

Advising and Mentoring	100%	95%

IX- Comments and Feedback

Favorable Comments

Year	19- What are your overall favorable comments about the Nursing Program?
2018	excellent
	Professors are very supportive Program is very enriching
	challenging
	Enhancing research skills
	It is comprehensive, It prepares me to be a nurse leader.
2019	It is an interactive program and I recommend everybody to enroll in it
	It is a very rich program, helps students acquire knowledge from different sub-specialties in Nursing. Empowers nursing students and prepares them to take on the more advanced role in nursing, which is the APN.
	Highly competent professors especially Dr. Clinton!

Unfavorable Comments

Year	20- What are your overall unfavorable comments about the Nursing Program?
2018	nothing
	None
	some delays

2019	Take students' suggestions and needs more into consideration (in terms of class schedule) + increase flexibility in courses between the semesters in order to decrease the time needed for the student to complete his/her courses and graduate (since most nursing students doing they MSN are working students).
	non-flexible schedule computer lab closes at 5pm, therefore less studying resources for students
	Number of credits

Recommendations

Year	21- What are your future recommendations concerning the program?
2018	To have more sub specialty
	None
	Open pediatric section
	Reducing unwanted courses like theories. Elaborating on research courses
2019	Nursing pathophysiology should be given by an expert in the field, well read in all aspects
	Have specific and clear guidelines to be provided to Nursing students as soon as they enroll in the Master's program, this will enable the student to better prepare and organize his/her life/residency/work while meeting the needs of the program. Have specific and clear guidelines to be provided to Nursing students as soon as they decide on whether they want to register for the Thesis/Project. This will prevent confusion that can be experienced by the student, and will enable him to prepare better and excel in the different stages of the Thesis/Project process.

VII- Comments and Feedback

Year 2018 themes	**Comments**
General	• The program is well established and helpful. It increases my knowledge a lot. • I would like to explain my great satisfaction to study at AUB HSON. I have learned a lot from the program, the interaction and the environment there. thank you • Enhance nursing research and focus on it. Suggestion: • - constructive feedback instead of criticism - building a positive environment that is nurturing to students
Mode of teaching delivery	• Some courses can be given online. • The way the courses are given should be improved. Blending online learning • Some major courses are being taught in an old boring version where every student had to present one chapter in turn.
Comments on clinical	• We need more faculty members with better clinical experience. • We need to have more clinical guidance and supervision. • Suggestion to have more nurse clinicians to teach in adult care
Scheduling of classes	• When a masters student, with a job (which is expected) enrolls in HSON he/she expects the classes to fit a life of a graduate AKA in the afternoon , not in the middle of the day, making it hard , hectic and very stressful to pursue my degree . • suggestions for improvement: - catering to students with full time jobs such as option of evening classes - availability of summer courses which can shorten duration to graduate - better organization of part time study plan so each semester is more or less equivalent in credits and workload

Year 2019 Themes	Comments
General	• Thank you all for everything! It has been great. Great job, keep up the good work. • I recommend AUB HSON a lot, I believe it's a good school. • Would appreciate if the computers and projectors are evaluated or changed because we are having difficulty in class using it.
Teaching delivery	• Shifting to an online MS program would be much appreciated, we are having difficulty in managing the classes time and our work schedule, most of our classes are in AM which is not feasible for nurses who do not work as RN's.
Services	• Mrs. Berbary (student services officer) is always ready to help in any student related issue. Mrs. Ghalayini administrative assistant) is always available for help and sends reminders. The tuition fees are high. • I appreciate that GA hours are flexible
Communication	• I appreciate that our Dean Dr. Huijer was always available for advice and recommendations. • I appreciate that my adviser Dr. Doumit is always available for help and she makes our learning experience better. My GA adviser is professional.

Exhibit I.09: Minutes of the Task force on Faculty Workload

AMERICAN UNIVERSITY OF BEIRUT
HARIRI SCHOOL OF NURSING

Taskforce on Faculty Workload
Minutes of Meeting – Oct 25, 2021

Time and place: The meeting came to order at 9 am in room 102, HSON building

Present: Lina Abi Fakhr Kantar, Angela Massouh, Samar Noureddine, Houry Puzantian, Silva Dakessian (replacing Hera Tashjian), and Lina Younan.

Order of Business:

1. **Review and approval of minutes Dec 17, 2020**: Minutes were approved.

2. **Review of "Compiled Document– Summary on Select Literature on Faculty Workload HSON AUB – Dec 17 Presentations**:. Sections on workload allocation (credits) were reviewed and relevant ones were **highlighted on document**, for follow up:

    a. Workload as per Washington University
    b. Workload as per Indiana University
    c. Thesis and dissertation supervisions would be requiring credits.
    d. Consideration to be given for number of students in class

3. **Review of AUB Workload Policy**: course load allocation. The policy was reviewed and relevant parts highlighted to guide the future work.

4. **Review and edit of Faculty Survey on Workload:** the survey was discussed. Dr. Noureddine will send it to the members for final review and approval before sending it to the faculty.

5. <u>Additional Tasks to follow up on:</u>

a. Revisit **clinical faculty workload distribution**.
b. Look into **workload for Online and blended coursework**
c. Workload for **Simulation sessions**
d. Workload for graduate teaching, especially mentoring thesis and dissertations

6. **Adjournment**: The meeting was adjourned at 10:40 am

Recorded by: Houry Puzantian

Hi all,
Thank you for accepting to precept with me in N400 this year.
I am attaching a **draft of the rotation** for your quick review. If this is ok, HSON will forward to AUBMC administration for approval.
Please mark your calendars on **Friday, September 10 at 2pm** for a quick zoom meeting to discuss course logistics. I am attaching a document on **Preceptor Expectations in Critical Care.** Please read this carefully before we meet. It includes all logistics, timings, and future meeting dates.

Below is the zoom details for September 10.

HSON Zoom2 is inviting you to a scheduled Zoom meeting.

Topic: Critical Care Faculty Meeting
Time: Sep 10, 2021 02:00 PM Beirut

Join Zoom Meeting

Preceptor Expectations in Critical Care

Welcome to the Critical Care Course.

First, I would like to thank you for agreeing to precept Senior Nursing Students at the Hariri School of Nursing in the NURS 400 Introduction to Critical Care course. You were selected for this integral role based on one or more of the below:

- BSN Graduate and/or MSN Enrolled or Graduate from AUB HSON in the Adult Care Track
- Proven experience in Critical Care with no less than 2 years
- Teaching/precepting experience is a plus

This document details what is expected of you in NURS 400 Introduction to Critical Care. The responsibilities of clinical preceptors are to guide students in the transition to the novice nurse role in practice. By the end of this clinical rotation, it is expected that students are able to take care of a critically ill patient under moderate, minimal to moderate, or minimal supervision.

It is expected that the clinical preceptor will collaborate with the course coordinator to promote student learning and growth through weekly communication. Clinical preceptors are expected to communicate their feedback about student performance to both the course coordinator and the student by the end of the second week of rotation in each specialty area. It is the preceptor's responsibility to complete a formative student evaluation at end of second week of rotation in each specialty area. It is the course coordinator's role to complete a formal midsemester student evaluation as well as a summative evaluation based on the formative evaluations you submit.

The preceptor agrees to:

1. Ensure course learning outcomes are met.
2. Provide ongoing supervision and direction of the student while in the clinical areas consistent with student ability and expectations and consistent with learning objectives.
3. Collaborate with students in meeting individualized learning objectives by selecting opportunities that facilitate learning.
4. Plan staged sudent experiences that provide a progression from observer to responsible professional practice.
5. Refer to the Competency Based Checklist to determine the skills that students are expected to perform.
6. Notify the clinical area Nurse Manager immediately if concerns/questions arise as to the student's behavior or nursing competence.
7. Attend the course meetings on Zoom or face to face [introductory meeting + midsemester student evaluation meeting + summative student evaluation meeting].

Clinical Logistics

- You will receive an email with the clinical rotation for you to save all your assigned clinical days. Clinicals start on **September 23** and end on **November 26.**
- Clinical hours are as such:
    - Thursday 7am to 3pm
    - Thursday 3 to 10pm
    - Friday 7am to 3pm or 3 to 10pm
- One of the preceptors [day or evening] is expected to be in the unit during PrepLab. Please contact your colleague [day/evening] ahead of time and plan that one of you is there. Prep Labs are planned as such:
    - Wednesday 1 to 2pm for Thursday 7am to 3pm clinicals
    - Wednesday 2 to 3pm for Thursday 3pm to 10pm clinicals
    - Thursday2 to 3pm for Friday clinicals
    - ED Group Online PrepLab
- In case of a serious excuse that is preventing you from coming, please make every effort to contact the students and cancel clinical several hours ahead of time so that students are not on clinical sites unattended. Inform me as soon as you can.
- By the end of every 2 rotations, you are expected to give the students a detailed evaluation [**Rotation Specific Clinical Evaluation** available on Moodle]. Students are expected to bring you the hard copy to fill. You will need to track student notes so that you are able to present your evaluation in the faculty meetings.
- Two careplans will be submitted in N400 only. So, you might not receive any careplan from your group. If you do, these need to be corrected within 1 week of submission. Careplan submission deadline: Saturday at 5pm after each clinical day. The last careplan can be submitted any time before November 27 at 5pm.

Meeting Dates

There will be 3 meetings throughout the semester.

1. **Introductory Meeting**
    - Date: September 10 at 2pm via Zoom
    - https://zoom.us/j/96804719312?pwd=YVBzYmgrcVhZZHhzMHllYTB2QnY0dz09
    - Meeting ID: 968 0471 9312
    - Passcode: 611193
2. **MidSemester Evaluation Meeting**
    - Date: October 29 at 1pm
    - Venue: will be discussed closer to the date.
3. **Summative Evaluation Meeting**
    - Date: December 10 at 1pm
    - Venue: will be discussed closer to the date.

AMERICAN UNIVERSITY OF BEIRUT

HARIRI SCHOOL OF NURSING

Minutes of NURS 302 (Nursing care of adults and older adults II) meeting

Friday, January 21, 2021

Time and Place: The meeting came to order at 11am, via WebEx.

Members present: Dr. M. Adra (course coordinator), Dr. Nour Alayan (course co-coordinator), Ms. Melissa Makhoul, Ms. Sarah Chehayeb, Ms. Emilie Succar and Ms. Nour Abdallah.

Absent: Ms. Silva Dakessian (excused).

Order of Business:

1) Access to Moodle: Moodle access with editing privileges is granted for all faculty members and preceptors participating in the course.
2) Simulation Lab: simulation will take place during the first 2 weeks of the clinical rotation (Jan 25th and Feb 1st, 2022). On each day, students will be divided into two groups (Group A and Group B). Group A will be in the sim lab from 8:30 am to 11:30am, and Group B will be in the sim lab from 12:30 pm to 03:30 pm. Each simulation lab will include 3 stations and each group will spend one hour on each station. On Jan. 25, the stations are: IV insertion, Neuro-assessment, and Calculation of dosages of medications and IV rates. On Feb. 1 the stations are: IV manipulation and administration of IVD medications, Review of history taking and the assessment sheet, and tracheostomy care and suctioning. Preceptors are distributed on each station according to the set schedule.

   The Neurologic assessment station will be manned by Mr. Mohammad Tabsh who is a registered nurse working on 4N; he will be demonstrating neuro assessment and allowing for return demonstration for both groups on January 25th, 2022.
3) The clinical experience:
   - Final clinical rotation schedule pending.
   - Prep labs will take place every Monday and Wednesday from 1:00 pm to 2:00 pm. Clinical rotations will take place every Tuesday and Thursday. Each clinical day

will have day shifts (from 07:00 am to 3:00 pm) and evening shifts (from 03:00 pm to 11:00 pm).

- Prep labs must be conducted in the presence of the preceptors to make sure that the students have collected the necessary data and visited and seen their patients; In case there is a need to change the prep lab hour, it must be in agreement with the preceptor and the whole group. Extra time may be given to students after the prep lab at the discretion of the preceptor to make sure that they understand their patient's condition and the priority nursing diagnoses of their patients.
- Clinical areas include: Bassile Infusion center (BIC), MS Center, 4 North, 9 North, 9 South, 10 North, 10 South and 5 South). Given that only 3 students are allowed at the MS Center at a time, the clinical experiences of BIC and MS Center may be combined together on the same day in a way that allows for all students to rotate in each area for a few hours.
- Post-clinical conferences are to be conducted at HSON instead of the conference rooms at AUBMC to avoid crowding on the unit. Each preceptor must book a classroom for the conference with Ms. Jeanette prior to the clinical day.
- Requests of preceptors regarding the clinical rotation slots will be taken into consideration while planning the clinical rotation.
- Phone numbers and email addresses of all preceptors are included in the course syllabus to facilitate communication between the students and the preceptors.
- A refresher session regarding the care plan, objectives of each clinical day, the physical assessment sheet and the planning of a clinical day experience will be given to students by Ms. Nour Abdallah on March 31, 1-3pm, 2022. Preceptors are encouraged to attend the session.
- There are three clinical evaluation forms for students which will be revised and uploaded on Moodle in the coming week. Evaluation forms must be filled after each clinical experience and signed by the students. The latter is to point out areas for improvement for the students and documenting data regarding the students' clinical performance. We will begin filling the evaluation forms starting the third clinical experience to allow some time for the students to adjust to the clinical area. Anecdotes and evaluation forms must also include the strengths of the students and

not only their weaknesses, for encouragement. All students must receive evaluations/feedback on a bi-weekly basis.

- Students who have weak clinical performance should sign a contract including their weaknesses and to set an action plan for improvement. This may be done after the mid-semester evaluation. Contracts have to be signed by the students during meetings between the preceptor and the student in the presence of Dr. Marina Adra or Dr. Nour Alayan.
- The uniform policy has to be strictly implemented.
- Students are required to submit five careplans **only** throughout the semester.
- Students are required to perform a health education (patient teaching) in the presence of the instructor about a topic relevant to their patient's condition **once** throughout the semester. Students are expected to complete this requirement towards the middle of the semester. This requirement is equivalent to 5% of the course grade. The rubric pertaining to patient education will be posted on Moodle in due time.
- The nature of the Nursing care needs to be emphasized. Students must be encouraged to perform nursing interventions and practice nursing skills in all of its different facets to enhance their learning experience (e.g., positioning patients, ambulating patients, putting bed pans, performing morning care, collecting specimens, checking intake/outputs…)

4) Care plans:

- Only **two** priority nursing diagnoses are required in each care plan, and they should be discussed thoroughly. **All relevant interventions** must be included.
- Students are required to submit their careplans **on the same day** of the clinical experience. More specifically, deadline for submission **for day groups is 5:00 pm** of the same day and **11:00 pm of the same day for evening groups.** For evening groups, students may be given some time during the clinical rotation to edit/finalize their careplans in case of changes in their patients' conditions.
- It was agreed that students submit their care plans via email.
- Feedback/Correction of careplans is essential to give instructions/comments to students on how to improve and write better.

- Students are allowed to use various resources to write their careplans as long as the resources are scientific and the information is paraphrased.
- For medication preparation: the indication of the medication in the patient's case, the generic name, the mechanism of action and the nursing implications of each medication must be emphasized. Preceptors have to make sure that the students know the meaning of abbreviations (e.g. ACE or ARB…). Rare side effects are not to be overemphasized.
- The rubric for the care plan will be uploaded on Moodle.
- The physical assessment sheet will be updated by Ms. Nour Abdallah.

Meeting adjourned at 12:30 pm

Recorder: Nour Abdallah

Exhibit I.11: Preceptor Education workshop

American University of Beirut
Rafic Hariri School of Nursing

Preceptor Education Workshop

An Overview

The primary drivers of change in today's nursing education aim at bridging the gap between health care requirements and educational preparation of nurses. The origin of the gap is attributed to the difference between educational goals and actual demands of the workplace. Preceptors may act as mediators between educational programs and health care settings.

Nursing literature defines preceptors as professional nurses who monitor the transition of new nurses from theory to practice and evaluate their performance. Preceptors employ time and efforts in coaching and evaluating students, emulating safety and competence in practice, and enriching the graduate's clinical repertoire. Undergraduate nursing students at the American University of Beirut are precepted throughout the semester. Preceptors are directly involved in monitoring students and evaluating them to ensure transference of classroom knowledge to practice.

The available literature highlights three significant roles that preceptors may assume when educating students. First, preceptors help to avoid a sudden transition from classroom to workplace; second, they are concrete models for emulating competent safe practice; and third, they continue the chain of learning.

Workshop Aims

The adequate preparation of preceptors helps to garner success of the educational process and achievement of program learning outcomes. The workshop aims at preparing preceptors who have genuine interest in teaching. The determinants of effective preceptorship include:

- Voluntary relationship between students and preceptors
- Interactive learning process
- Involvement of teacher, preceptor and student
- Clinical setting and simulation as the medium of instruction
- Focus on student learning

Workshop topics

This workshop sheds light on new perspectives in nursing education such as simulation, with the following themes forming the basis of the workshop:

- Principles and implications of preceptorship
- Learning theories and relevant teaching strategies
- Learning needs, readiness, and styles
- Constructive feedback
- Skills for writing anecdotes
- Simulation implementation at HSON

Workshop Outcomes

At the conclusion of the Preceptor Education Workshop, the preceptor candidates will be able to demonstrate competency and ability to serve as a nurse preceptor. The expected outcomes revolve around enabling participants to:

- Demonstrate the duties and responsibilities of the preceptor and its relationship to other support roles.
- Build and maintain a working relationship with the preceptee, create a learning environment, and enhance the socialization process.
- Incorporate learning theories in the education process, assess learning styles and learning needs, and assist learners in maximizing their potentials to achieve learning objectives.
- Set realistic goals, assess progress, and give constructive feedback.
- Plan effective teaching strategies by incorporating simulation into the teaching learning process.

Preceptor Workshop

February 14, 2019

Timetable

Time	Topic	Presenter
8:00-8:30	**Registration**	Dr. Lina Kantar
8:30-9:00	**Introductory concepts on precepting students**	Mrs. May Khoury
9:00-9:30	**Learning theories**	Dr. Kantar
9:30-10:00	• **Learning theories applied**	Dr. Kantar
9:45-10:15	**Coffee Break**

12:15-12:30	**Logistics & administrative Processes**	Mrs. Patricia Assaf

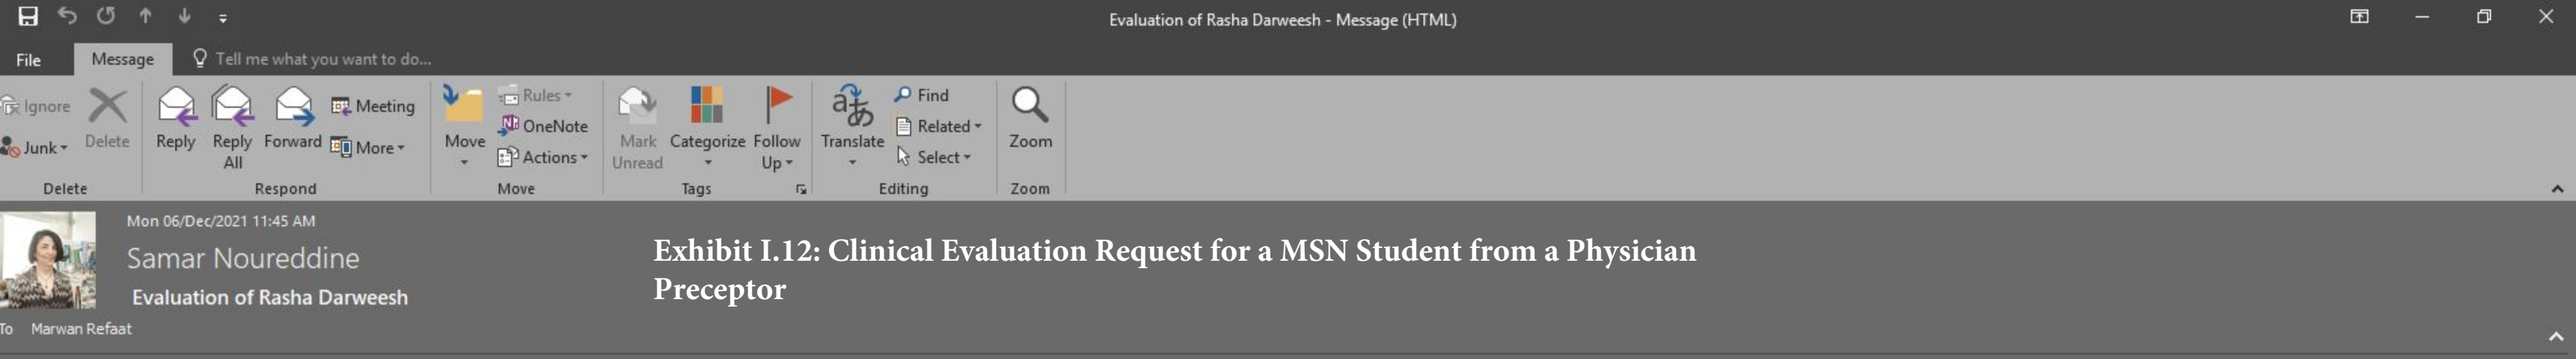

Exhibit I.12: Clinical Evaluation Request for a MSN Student from a Physician Preceptor

Dear Dr. Refaat,

Let me start by expressing my thanks and appreciation to you for supervising Rasha Darweesh in her clinical rotation this Fall semester considering the hectic times you are going through with the economic crisis, as she finished her training with you. She had a very rich experience and I could tell from her weekly reports that she had a very rich exposure to various kinds of patients with cardiac electrophysiologic disorders.

I am writing to seek your evaluation of her performance, using the below criteria. I would greatly appreciate having your comments under each of the criteria. I am also asking for an overall grade out of 100. I would greatly appreciate your response at your earliest convenience so I can finalize her grades. Thank you

1. Assessment and diagnostic reasoning skills as demonstrated by the student's involvement with the patients and clinical team
2. Communication and interaction with patients: professionalism, therapeutic communication, engagement in the discussion etc...
3. Knowledge in the area as reflected in the student's discussions with you
4. Critical thinking as reflected from her questions to you and the team
5. Professional qualities: Motivation, punctuality, initiative etc..

Thank you

CRNA: Certified Registered Nurse Anesthetist
MSN: Masters of Science in Nursing
RN: Registered Nurse

Executive Summary

The Hariri School of Nursing Masters of Science in Nursing (MSN) program was launched in 2003, starting with 2 tracks: Administration and Adult Care. In 2008, the Psychiatry and Mental Health track was launched and in 2009 the Community and Public Health track was started. Continuous evaluation is maintained for the curricula of all tracks through feedback from students (instructor course evaluation, student satisfaction and exit surveys), faculty (course evaluation), as well as current trends in graduate nursing education and the context of Lebanon. The MSN program is registered in the New York State Department of Education (Hegis code 1203.10). The program got accredited by the Commission on Collegiate Nursing Education (CCNE) in 2007 and got reaccredited in 2012 for 10 years.

Developments in nursing, including new essentials for graduate education released by CCNE, required revisiting the curriculum. The Graduate Studies Committee is proposing a revision of all tracks of the MSN program. The revisions involve mostly the core component that students from all tracks must take, in addition to additional coursework in the adult care, administration and community and public health tracks. The psychiatric mental health nursing track remains unchanged. The revised clinical tracks aim to prepare graduates for the Clinical Nurse Specialist role.

The proposed revisions are not expected to entail additional human or material resources. One new core biostatistics course will be offered by the newly hired biostatistics assistant professor. One new course on budgeting has been offered before in the Summer Nursing Institute for a number of years. The new course in the Adult Care track can be offered by the current faculty. There is one additional course in the Administration track on nursing informatics that students can take online at the University of Colorado, which approved our request to have our students take the course.

In addition, the Graduate Studies Committee is proposing a new track in Nursing Research, which includes the core courses of the MSN program, the courses that constitute the SHARP certificate program offered in the summer, in addition to a thesis. This new proposed MSN in Nursing Research does not entail any additional courses beyond what is available and thus does not require additional resources. This track aims to better prepare nurses for research careers or pursuit of doctoral study.

Overview of the MSN Program

The Hariri School of Nursing, founded in 1905 as a three year diploma program, was the first nursing school in the Middle East. In 1936, there was a five year Bachelor of Science in Nursing program (BSN), which was replaced in 1964 by the current four-year program (including the freshman year) leading to the degree of Bachelor of Science in Nursing. The Master of Science in Nursing (MSN) program was launched in the academic year 2003-2004, following a needs assessment study of 328 nurses that included graduates of the BSN program at AUB and other nurses who hold positions in Lebanon, Jordan and the United Arab Emirates. The majority of the respondents requested higher education in nursing as a means to meet the health needs in Lebanon and 92% expressed their support for an MSN program. Over two thirds of the sample selected as area of specialty adult care, nursing administration, or nursing education. In 2003-2004, the program was launched, starting with 2 tracks: Adult Care and Nursing Administration. Moreover, students interested in nursing education could have a minor in education along with their main MSN degree through taking additional courses in education.

Hariri School Of Nursing Mission

The mission of the Hariri School of Nursing is to promote and maintain the highest educational standards of excellence, integrity, and professionalism in nursing, following the American model of nursing education and practice. The School aims to provide learning opportunities that will enable students to develop into competent nurses who respect cultural diversity while coordinating and delivering high quality, compassionate nursing care in Lebanon and the region, guided by ethical principles. The faculty believes education is an interactive process between faculty and students with both taking responsibility for active learning. The baccalaureate program, drawn primarily from the humanities, sciences, and caring disciplines, focuses on the use of nursing theory and research as a basis for practice. The master's program focuses on preparing nurses for advanced nursing practice roles, and is based on the use and generation of research based knowledge to guide practice. Nursing students at AUB learn to think critically, develop professional attitudes and leadership skills, and appreciate the value of life-long learning and freedom of speech.

Hariri School Of Nursing Vision

The Hariri School of Nursing aspires to become the leading school of nursing in Lebanon and the region; nationally and internationally recognized for excellence in education, research, and service.

The school is committed to offering cutting-edge culturally-relevant and internationally recognized graduate and undergraduate education, fostering life-long learning and scholarship, developing the leaders in nursing and health care, and attracting a competent and culturally-diverse student body.

MSN Program Learning Outcomes

Upon successful completion of the MSN program, students are expected to:

1. Integrate theory and research in nursing and related disciplines as basis for advanced nursing practice and role development.
2. Initiate, participate in, utilize and disseminate nursing research.
3. Deliver advanced practice nursing based on critical thinking, advanced knowledge and skills in specialized area of nursing.
4. Demonstrate advanced decision-making across health care settings, using multidisciplinary approach.
5. Analyze the impact of socio-cultural, ethical, legal, and health care policy issues on nursing practice and health care delivery.
6. Assume leadership roles in education and management to promote health care.

Tracks by Specialty Area

The current MSN program offers a minimum of 36 credits with a comprehensive exam and the option of either a 6 credit thesis, or a 3 credits graduation project, with 3 credit of elective course work. The program is registered at the New York State Department of Education, HEGIS code 1203.10.

In 2007, the MSN program got unconditional accreditation by the Collegiate Commission in Nursing Education (CCNE) of the American Association of the Colleges of Nursing (AACN). There was only one recommendation for the Adult Care track to have separate courses in advanced pathophysiology and pharmacology, as opposed to the integrated approach that was originally used in the courses whereby pathophysiology and pharmacology content was integrated in the courses that discuss the health management of adult patients.

In 2008, the Psychiatric and Mental Health track was launched and in 2009 the Community and Public Health track was launched.

In 2012, the MSN program was re-accredited by CCNE for a period of 10 years.

As of September 2014, the MSN program has graduated 134 students from all tracks.

The MSN program currently includes the following components:

1. A total of 9 credits of core courses in:
    a. Nursing Theory (N500, 2 credits)
    b. Foundations of Advanced Practice (N501, 3 credits), and
    c. Advanced Nursing Research (N502, 4 credits)
2. Three credits in role development (N507: Nursing Administration or N509: Nursing Education)
3. Seventeen to twenty two credits of specialty courses (this varies by track)
4. Six credits thesis or 3 credits project + 3 credits elective coursework
5. One to three credits of Elective coursework

Students in the clinical tracks who plan to get certified in their area of specialty in the US may take N528 (2 credits), an additional practicum course worth of 100 hours of clinical training in advanced nursing practice in their area of specialty.

Students interested in a career in nursing education take 12 credits in education, including: NURS 509 (Role Development in Nursing Education), 2 courses in the department of education and an elective course in education.

Appendix A outlines the courses and their descriptions for each MSN track.

MSN Revision

The MSN program is under continuous scrutiny by the Graduate Studies Committee since its inception in 2003-2004 and is often reviewed at the course level. Two major reviews of the program were undertaken when the self-study for the CCNE application was being prepared in 2006 and then again in 2011. In deciding revisions, which so far have been minor, data from student satisfaction surveys, course evaluations by students and faculty members, exit surveys, as well as developments in nursing are used to guide curricular decisions. Other criteria that underlie curricular decisions include the context of the nursing profession in Lebanon. For instance, initially the clinical tracks were generic, preparing advanced practice nurses who could fit the needs in the country, knowing that the level of a Masters prepared Nurse Specialist is not recognized legally yet in Lebanon. The Nursing Law that includes the Nurse Specialist level being currently considered at the Lebanese Parliament.

<u>New accreditation requirements</u>

In 2011, around the time of re-accreditation of the MSN program, the CCNE developed new essentials for graduate education in nursing. Those new essentials were not imposed on programs undergoing reaccreditation for immediate implementation at the time, but were recommended for implementation soon. The main features of those new recommendations were shifting the focus away from preparation in roles of advanced practice and more towards ensuring generic skills and knowledge for all MSN students regardless of area of specialty. The table in Appendix B highlights the main differences between the 1996 and the 2011 CCNE essentials of graduate education.

The most important consideration in the 2011 essentials is the recommendation that all Masters programs provide core content to all students regardless of specialty in the following areas:

- Organizational culture and assessment
  - Systems theory/thinking
  - Leadership and team building
- Policy development: Politics and ethics
  - Change theory and management of change
- Process improvement techniques
  - Quality improvement tools, quality performance indicators, nurse sensitive outcomes, patient safety
  - Problem identification, data driven decision making
- Informatics

- Integration of health care technology in documentation, decision support systems, telemedicine
- Databases and health information management
- Health care economics: e.g. Product value analysis

Another factor that drove the revision of the MSN program is the consensus model of Advanced Practice Registered Nurse (APRN) regulation that was proposed in a white paper in 2008 by a joint group from the American Association of Colleges of Nursing (AACN) that accredits nursing programs, the National Council of State Boards of Nursing and the National Organization of Nurse Practitioner Faculties. This model governs licensure, accreditation, certification and education of APRNs and will be enforced soon. This model defines APRNs as licensed independent practitioners who are expected to practice within standards established or recognized by a licensing body. The model defines the APRN as a nurse who:

1. Has completed an accredited graduate-level education program preparing him/her for one of the four recognized APRN roles: certified registered nurse anesthetist (CRNA), certified nurse-midwife (CNM), clinical nurse specialist (CNS), or certified nurse practitioner (CNP);
2. Has passed a national certification examination that measures APRN, role and population-focused competencies and who maintains continued competence as evidenced by recertification in the role and population through the national certification program;
3. Has acquired advanced clinical knowledge and skills preparing him/her to provide direct care to patients, as well as a component of indirect care;
4. Has practice that builds on the competencies of registered nurses (RNs) by demonstrating a greater depth and breadth of knowledge, a greater synthesis of data, increased complexity of skills and interventions, and greater role autonomy;
5. Is educationally prepared to assume responsibility and accountability for health promotion and/or maintenance as well as the assessment, diagnosis, and management of patient problems;
6. Has clinical experience of sufficient depth and breadth to reflect the intended license; **and**
7. Has obtained a license to practice as an APRN in one of the four APRN roles: CRNA, CNM, CNS or CNP.

The revised clinical tracks of the MSN program at AUB will be tailored to prepare clinical nurse specialists (CNSs). The CNS, according to the consensus model, has a unique APRN role to integrate care across the health illness continuum and through three spheres of influence: patient, nurse, system. The three spheres are overlapping and interrelated but each sphere has a distinctive focus. In each of the spheres of influence, the primary goal of the CNS is continuous improvement of patient outcomes and

nursing care. Key elements of CNS practice are to create environments through mentoring and system changes that empower nurses to develop caring, evidence-based practices to alleviate patient distress, facilitate ethical decision-making, and respond to diversity. The CNS is responsible and accountable for the diagnosis and treatment of health/illness states, disease management, health promotion, and prevention of illness and risk behaviors among individuals, families, groups, and communities.

The consensus model recommends that APRN education must:

a. Be formal education with a graduate degree or post-graduate certificate (either post-master's or post-doctoral) that is awarded by an academic institution and accredited by a nursing or nursing-related accrediting organization recognized by the U.S. Department of Education and/or the Council for Higher Education Accreditation;
b. Be awarded pre-approval, pre-accreditation, or accreditation status prior to admitting students;
c. Be comprehensive and at the graduate level;
d. Prepare the graduate to practice in one of the four identified APRN roles;
e. Prepare the graduate with the core competencies for one of the APRN roles across *at least one* of the six population foci;
f. Include at a minimum, three separate comprehensive ***graduate-level*** courses (the APRN Core) in:
    - Advanced physiology/pathophysiology, including general principles that apply across the lifespan;
    - Advanced health assessment, which includes assessment of all human systems, advanced assessment techniques, concepts and approaches; **and**
    - Advanced pharmacology, which includes pharmacodynamics, pharmacokinetics and pharmacotherapeutics of all broad categories of agents.
g. Additional content, specific to the role and population, in these three APRN core areas should be integrated throughout the other role and population didactic and clinical courses;
h. Provide a basic understanding of the principles for decision making in the identified role;
i. Prepare the graduate to assume responsibility and accountability for health promotion and/or maintenance as well as the assessment, diagnosis, and management of patient problems, which includes the use and prescription of pharmacologic and non-pharmacologic interventions; and
j. Ensure clinical and didactic coursework is comprehensive and sufficient to prepare the graduate to practice in the APRN role and population focus.

k. The population foci defined by the model and which MSN programs ought to address include adult-gerontology; family/individual across the life span; neonatal; pediatrics; and women's health/gender related. Further specialization such as in areas like oncology or palliative care, can be acquired with more course work.

Thus in light of the above, the Graduate Studies Committee of the Hariri School of Nursing reviewed all the data at hand and worked on revising the MSN curriculum. First the MSN Program outcomes were revised. Description of the revised program is:

'*The program provides students with a thorough understanding of the theoretical basis of advanced practice and also incorporates managerial, administrative and educational skills. Depending on the track of study, the graduate is expected to be an expert clinician, an informed educator, a knowledgeable researcher and a skilled manager*'.

Revised MSN Program Learning Outcomes

The MSN program will prepare nurses who:

1. Integrate theory and research in nursing and related disciplines as basis for advanced nursing practice and role development.
2. Participate in conducting research within collaborative teams to improve care outcomes and support policy changes
3. Deliver advanced practice nursing based on critical thinking, research evidence, and advanced knowledge and skills in specialized area of nursing.
4. Demonstrate advanced clinical and data driven decision-making across health care settings.
5. Analyze the impact of socio-cultural, economic, ethical, legal and political issues on nursing practice, health promotion strategies and health care delivery.
6. Assume leadership roles in education and management, utilizing inter-and intra-disciplinary approaches and systems thinking.
7. Analyze current and emerging technologies to optimize patient safety, cost-effective care, quality and health outcomes'.

The curricular revisions of the MSN include changes to the common core courses that students in all tracks take, in addition to track-specific changes.

Changes in the Core Courses

The new core course work includes 12 credits divided as follows (see current and revised/new course syllabi in Appendices C-K):

- N500: This course remains worth 2 credits but is changed from 'Nursing theory' to 'Theories, concepts, and ethical practices for advanced nursing practice' (Appendices C and D).
- N501: This course was reduced from 3 to 2 credits with the understanding that specialty- specific roles shall be integrated in specialty courses in the various tracks. The title is changed from 'Foundations for Advanced Practice' to 'Advanced Nursing Practice: Scope and Roles' (Appendices E and F).
- N530: Statistical Reasoning and Application for Nursing Research. This is a new 2-credit course that covers statistical analysis including the theoretical part that was in N502 and application in the computer lab on SPSS. This course was added based on students' request for more practice in statistics and in order to better prepare graduates who might be interested in pursuing doctoral study (Appendix G).
- N502: This advanced nursing research course was reduced from 4 down to 3 credits. The content is the same except the statistical analysis part was removed (Appendices H and I).
- N527: This 3-credits course was changed from 'Developing Health Service Programs' to 'Systems Approach to the Development and Evaluation of Health Care Services' and given in the revised format this fall semester. This course, which was offered only to the Administration track students, will become part of the core for students of all tracks, in order to provide content related to leadership and management, informatics, project development and evaluation (Appendices J and K).

The role development courses are no more required from all the students. In the revised program, N507 is reduced to a 2 credit course instead of 3 credits and is required from the revised administration track students. The title is changed from 'Role development in Nursing Administration'' to 'Essentials of Nursing Administration and Management' (Appendices L and M). On the other hand, N509, the 3 credit course 'Role Development in Nursing Education', will be required of nursing students taking the minor in nursing education; otherwise students in any track may take it as an elective.

Changes in Specialty Courses

Adult-Gerontology Track

The revised Adult Care Track will be named Adult-Gerontology Track in line with accredited US programs. As mentioned above the adult care track students will take the revised core courses described

above. The advanced Assessment, Pathophysiology and Pharmacology courses remain as offered currently. The Advanced Practice in Adult Care I course is expanded from a one 4-credit course to a two 4-credit course series titled 'Advanced Practice in Adult Care I' and 'Advanced Practice in Adult Care II' (Appendices N, O, and P). The rationale for the change includes:

1. Provision of enough content in gerontology, so the track becomes Adult-Gerontology in line with the consensus model requirements.
2. Provision of more content on health promotion and risk reduction for those students who do not want to take the community track courses as electives.
3. Add 2 credits of clinical to ensure that the program offers 500 hours of clinical, which is now a requirement for APRN programs.

Finally, the Advanced Practice in Adult Care II (i.e. the residency in adult care) remains 4 credits and is titled 'Advanced Practice in Adult Care III'.

Below is the course distribution for the revised adult care track.

Adult-Gerontology Track:	**Lect Hr/wk**	**Clinical hr/wk**	**Total credits**
NURS 500 Theories, concepts, and ethical practices for advanced nursing practice	2	0	2
NURS 501 Advanced Nursing Practice: Scope & Roles	2	0	2
NURS 502 Advanced Nursing Research	3	0	3
NURS 530 Statistical Reasoning and Application for Nursing Research	2	0	2
NURS 527 Systems Approach to the Development and Evaluation of Health Care Services	3	0	3
NURS 503 Advanced Health Assessment	2	3	3
NURS 504 Advanced Pathophysiology (blended)	3	0	3
NURS 505A Advanced Practice in Adult Care I	2	6	4
NURS 505B Advanced Practice in Adult Care II	2	6	4
PHRM 314 Advanced Pharmacology and Therapeutics	3	0	3
NURS 506 Advanced Practice in Adult Care III	0	16	4
NURS 599 Thesis or NURS 598 Project and elective	–	–	6

The total number of credits for the revised adult-gerontology care track is: 39 credits.

Nursing Administration and Management Track

The revised administration track is renamed 'Nursing Administration and Management Track'. Students will take the 12 credits worth of core courses. Their specialty courses include the revised NURS 507 course; NURS 531 (Appendix Q), a one credit budgeting course in lieu of HMPD 342; NURS 525 was expanded from 2 to 3 credits, revised and titled 'Leadership Theories and Approaches for Nurse Managers' and was given in the new format this fall semester (Appendices R and S); a new 3 credit course on Nursing Informatics (Appendix T); the same current NURS 520 'Managing Quality with Teams' course; the same MNGT 332 course titled 'Human Resource Management'; and the same NURS 508 (Advanced Practice in Nursing Administration)'. An agreement was reached with the University of Colorado to have students take the informatics course online (NURS 6482: e-Health). Below is the course distribution for the nursing management track

Nursing Administration and Management Track:	**Lect Hr/wk**	**Clinical hr/wk**	**Total credits**
NURS 500 Theories, concepts, and ethical practices for advanced nursing practice	2	0	2
NURS 501 Advanced Nursing Practice: Scope & Roles	2	0	2
NURS 502 Advanced Nursing Research	3	0	3
NURS 530 Statistical Reasoning and Application for Nursing Research	2	0	2
NURS 527 Systems Approach to the Development and Evaluation of Health Care Services	3	0	3
NURS 507 Essentials of Nursing Administration and Management	2	0	2
NURS 508 Advanced Practice in Nursing Administration	0	16	4
NURS 531 Budgeting	1	0	1
NURS 525 Leadership Theories and Approaches for Nurse Managers	3	0	3
NURS 520 Managing Quality with Teams	3	0	3
MNGT 332 Human Capital Management	3	0	3
NURS 6284 E-Health	3	0	3
NURS 599 Thesis or NURS 598 Project and elective	–	–	6

The total number of credits for the Nursing Administration and Management Track is 37 credits.

Psychiatric and Mental Health Track.

Students in this track take the new 12 credits of core courses as other students. No changes were made to the specialty courses in the Psychiatric and Mental Health track. The course distribution for the revised psychiatric and mental health track is shown below.

Revised Psychiatric Mental Health Track	**Lect Hr/wk**	**Clinical Hr/wk**	**Total credits**
NURS 500 Theories, concepts, and ethical practices for advanced nursing practice	2	0	2
NURS 501 Advanced Nursing Practice: Scope & Roles	2	0	2
NURS 502 Advanced Nursing Research	3	0	3
NURS 530 Statistical Reasoning and Application for Nursing Research	2	0	2
NURS 527 Systems Approach to the Development and Evaluation of Health Care Services	3	0	3
NURS 503A Advanced Health Assessment for Mental Health	1	0	1
NURS 504 Advanced Pathophysiology	3	0	3
NURS 512 Advanced Mental Health Assessment	1	3	2
PHRM 314 Advanced Pharmacology and Therapeutics	3	0	3
NURS 516 Psychopathology and Human Behavior	3	0	3
NURS 517 Models of Treatment-Psychotherapy	1	6	3
NURS 518 Group and Family Psychotherapy	1	6	3
NURS 519 Clinical Residency in Acute Psychiatric Care	0	16	4
NURS 599 Thesis	_	_	6
or			
NURS 598 Project and elective			

The total number of credits for the Revised Psychiatric Mental Health Track is 40 credits.

Community and Public Health Track

Students in this track will take the new 12 credits of core courses as other students. No changes were made to the specialty courses in the nursing courses. However, one 2 credit epidemiology course (EPHD 301) was added to the track, which is an introductory course in epidemiology that the department of epidemiology and biostatistics at the Faculty of Health Sciences agreed to offer for students in their program who come from the health care field; See Appendix U for the course description. The course distribution for the revised Community and Public Health track is shown below.

Revised Community and Public Health Track	**Lect Hr/wk**	**Clinical Hr/wk**	**Total credits**
NURS 500 Theories, concepts, and ethical practices for advanced nursing practice	2	0	2
NURS 501 Advanced Nursing Practice: Scope & Roles	2	0	2
NURS 502 Advanced Nursing Research	3	0	3
NURS 530 Statistical Reasoning and Application for Nursing Research	2	0	2
NURS 527 Systems Approach to the Development and Evaluation of Health Care Services	3	0	3
NURS 503 Advanced Health Assessment	2	3	3
NURS 504 Advanced Pathophysiology (blended)	3	0	3
PHRM 314 Advanced Pharmacology and Therapeutics	3	0	3
NURS 522 Principles and Practice of Community Health Nursing	2	3	3
NURS 523 Advanced Community Assessment	2	3	3
NURS 524 Clinical Residency in Community Health Care	0	16	4
EPHD 301 Principles of Epidemiology for Health Professionals	2	0	2
NURS 599 Thesis	–	–	6
or			
NURS 598 Project and elective			

The total number of credits for the Revised Community and Public Health Track is 39 credits.

New Track

MSN Track in Nursing Research

The Graduate Studies Committee is also proposing a new MSN track in Nursing Research. The rationale is to provide an opportunity for students interested in a research career or planning to pursue a PhD program to develop their research skills more than what the regular tracks currently allow. The proposed revisions of most tracks will lead to an increase in the number of credits. Even now more students are opting for projects than thesis due to the demands of these professional tracks. Since the MSN program inception in 2003, only 10 out of 134 MSN graduates did a thesis. We expect the situation to continue with the revised program.

The Scholars in HeAlth Research Program (SHARP) certificate program, which aims to prepare scholars in health research, has attracted a good number of MSN students over the last three years. Although only 4 places were made available for nursing students, many students showed interest in the research program and actually applied. Similarly, the market analysis that was recently conducted by HSON to determine the feasibility for a PhD program showed a large number of respondents indicating an interest in a research career. The above substantiate the need to open an MSN research track at HSON and as such guaranteeing its feasibility and viability. The plan for this track shall include the core courses, in addition to the SHARP certificate program courses. The SHARP courses are currently offered during summer, so no additional resources will be required. The curriculum plan shall be as follows:

MSN in Nursing Research Track	**Lect Hr/wk**	**Clinical Hr/wk**	**Total credits**
NURS 500 Theories, concepts, and ethical practices for advanced nursing practice	2	0	2
NURS 501 Advanced Nursing Practice: Scope & Roles	2	0	2
NURS 502 Advanced Nursing Research	3	0	3
NURS 530 Statistical Reasoning and Application for Nursing Research	2	0	2
NURS 527 Systems Approaches to the Development and Evaluation of Health Care Services	3	0	3
SHARP 300 Principles of Epidemiology	2	2	2
SHARP 320 Design and Analysis of epidemiological studies	2	2	3
SHARP 310 Biostatistics	2	2	4
SHARP 315 Introduction to Research Ethics and Responsible Conduct of Research	1	0	1
SHARP 325 Library Science and Informatics	0	0	0
SHARP 330 Analysis and Reporting of Large Clinical Datasets I	2	0	2
NURS 599 Thesis	–	–	6

The total number of credits for this track is 30 credits.

The SHARP courses' descriptions as per AUB catalogue follows:

SHARP 300 Principles of Epidemiology *11.3; 2 cr.
A course in principles, concepts and application of epidemiology tools relevant to public health practice. The course consists of lectures, assigned readings and complimentary practical sessions. It will cover the basic principles of epidemiology such as disease occurrence, distribution and determinants, different epidemiologic study designs such as cross-sectional, case-control, and cohort studies; with applications on sources of data, indices of morbidity and mortality, measures of association, bias, confounding and interaction. *Offered only in Summer. Equivalent to EPHD 300*.

SHARP 320 Design and Analysis of Epidemiological Studies *17.5; 3 cr.
The course introduces elements and methodological issues related to study design, data analysis, and inference in epidemiological research. Cohort and case-control studies are the focus of discussion. Problems of exposure and disease definitions, confounding, effect modification, matching, bias, interaction, and misclassification are considered. Equivalent to EPHD 320.

SHARP 310 Biostatistics *22.11; 4 cr.
This course is an introduction to basic statistical techniques applied to health sciences and related fields. The objectives are twofold: descriptive statistics which encompass techniques for organizing and summarizing data, and inferential statistics from estimation, to confidence interval, and testing of hypothesis. Applications include probability distribution, comparing population means (t-tests) or proportions (X2 squares) for data obtained from paired or independent samples, significance testing, sample size calculation and power, stratified and matched analyses, and oneway ANOVA. Also, it introduces simple linear regression, correlations, logistic regression and nonparametric methods for data analysis. Focus will be on problems that are commonly encountered in health services and biomedical research. *Offered only in Summer. Equivalent to EPHD 310.*

SHARP 315 Introduction to Research Ethics and RCR *8.1; 1 cr.
This course recaps the history of ethical principles, the development of research codes of conduct and ethical practices and familiarizes investigators and faculty members with the different kinds of ethical issues that they might come across throughout their careers; it allows scholars to reflect critically about what it means to be an ethical and responsible researcher. The course format is a mixture of didactic lectures, online training modules (CITI Responsible Conduct of Research modules), case-studies, clinical research practicums and discussions, interactive lectures that are Power Point based, small discussion groups, audios, video prompts (real footages and films), simulations (e.g. mock IRB) allowing scholars to role play followed by discussions. *Offered only in Summer*.

SHARP 325 Library Science/ Informatics *4.0; 0 cr.
This introductory course spans two 2-hour session, and focuses on effective and efficient searching skills of bibliographic medical and health-related databases with various search options/techniques that the OVID interface allows using MeSH terms, explode functions, keyword searching in title, abstract, and subject headings, adjacency, and publication types, in addition to Boolean operators and truncation using MeSH terms. MeSH is used by the indexers at National Library Medicine to describe the content of an article. These MeSH terms are also organized in a hierarchy or tree structure, and this would allow users to explode a MeSH to ensure that narrower MeSH terms are also included in the search. Training format is a mixture of

demonstrations, hands-on exercises, and clinical scenarios. *Offered only in Summer*.

SHARP 330 Analysis and Reporting of Large Clinical Datasets I *4.9; 2 cr.
This course will put into practice the statistical analysis and other computing skills introduced to scholars in EPHD 300/ SHARP 300, EPHD 310/ SHARP 310 and SHARP 325. The training format is a mixture of demonstrations, hands-on exercises, and clinical scenarios. The course will simulate previously executed/published analyses on previously collected de-identified health research datasets. Scholars will go through the entire process experience of data handling, hypothesis-driven analysis design and culminating with the execution of statistical analysis (modeling) and presentation of results. In addition, this course will use existing datasets to familiarize scholars with commonly used health data analysis methods that are otherwise not covered in the MS/MPH curriculum. These will include survival analysis methodology, Cox regression multivariate modeling of survival data, approaches to matching of study cohorts and mathematical model simulation (predictions)/ risk modeling. *Offered only in Summer*.
*** as per the full seven-week summer session (each session + 2 hours).**

APPENDICES

Appendix A

Current MSN curricula.

Adult Care Track:	**Lect Hr/wk**	**Clinical hr/wk**	**Total credits**
NURS 500 Nursing Theory	2	0	2

Below are the catalogue descriptions of the MSN courses that are currently offered.

NURS 500 Nursing Theory (2 credits)
This course provides analysis and evaluation of nursing theories and conceptual frameworks with implications for practice and research. Overview of theory development is presented with a focus on the students' area of study.

NURS 501 Foundations of Advanced Practice (3 credits)
The course provides students with knowledge about the advanced nursing practice (ANP) role, and focuses on the foundations and philosophy of care. Legal and ethical issues related to ANP, such as regulation, are explored. The role of nursing in affecting health care system change is emphasized.

NURS 502 Advanced Nursing Research (4 credits)
This course focuses on complex research designs and analysis of multiple variables. The interrelationship of theoretical frameworks, quantitative/qualitative design, sample selection, data collection instruments, and data analysis are analyzed in terms of clinical nursing research problems.

NURS 503 Advanced Health Assessment (3 credits)
This course focuses on the advanced comprehensive assessment of individuals using a case based approach. Students are provided with advanced knowledge and skills in clinical interview, focused history taking, psychosocial and physical assessment, and diagnostic reasoning.

NURS 503A Advanced Health Assessment for Mental Health (1 credit)
This theory course focuses on the comprehensive health assessment of clients using a biopsychosocial approach. Mental health students will build on their knowledge and skills in clinical interviewing, focused history taking, and critical analysis of client data to identify actual and potential health problems. The focus will be on the differential diagnosis of various case presentation with organic and psychological etiologies.

NURS 504 Advanced Pathophysiology (3 credits)
This is a course in advanced pathophysiology related to acute and chronic illnesses experienced by adults. Emphasis is placed on pathophysiologic nursing phenomena experienced across diseases, their manifestations and assessment measures. Case studies are used to illustrate application to advanced nursing practice.

NURS 505 Advanced Practice in Adult Care I (4 credits)
This course builds on NURS 504 and includes a theory and a clinical component. Emphasis is on the application of pathophysiologic, psychologic and pharmacologic principles and advanced practice skills in the management of adults with potential and actual health problems. The practicum provides opportunities for students to begin development of their advanced practice roles in specialty areas of their choice. *Prerequisites: NURS 503, NURS 504.*

NURS 506 Advanced Practice in Adult Care II (4 credits)
This is a practicum in which students apply content learned in NURS 503, 504, 505and 515, and use concepts learned in NURS 501 and NURS 509, in the advanced management of adult clients with various illnesses. Interdisciplinary collaboration, research utilization, educational activities and case

management are emphasized in a specialty area of practice. *Prerequisites: NURS-505 and PHRM 314.*

NURS 507 Role Development in Nursing Administration (3 credits)
This course focuses on administrative skill development, managerial roles and responsibilities, and organizational effectiveness in a changing health care environment. Emphasis is placed on strategic management, interdisciplinary collaboration, business ethics, and international health management.

NURS 508 Advanced Practice in Nursing Administration (4 credits)
This practicum focuses on developing advanced management and administrative nursing skills in hospitals and primary health care settings. *Prerequisite: NURS 507.*

NURS 509 Role Development in Nursing Education (3 credits)
This course addresses principles of teaching and learning, instructional methods, test construction and use, as well as curriculum and program development as applied to nursing. The course enables students to apply educational theory and research in various settings such as schools of nursing and staff development centers.

NURS 512 Advanced Psychiatric and Mental Health Assessment (2 credits)
This course focuses on the advanced comprehensive mental health assessment of individuals using a case based approach. Students are provided with advanced knowledge and skills in clinical interview, focused history taking, mental status examination and diagnostic reasoning. The student performs comprehensive assessment and D.S.M. IV diagnosis on adult populations.

PHRM 314 Advanced Pharmacology and Therapeutics (3 credits)
This course covers pharmacology and drug therapy related to advanced nursing practice. General principles of pharmacokinetics pharmacotherapeutics, pharmacogenetics and considerations for special populations are covered. Classes of drugs, their mechanism of action, drug selection, dosage, therapeutic and adverse effects, and patient monitoring are discussed using case studies of clinical conditions. *Students are required to have taken pharmacology at the undergraduate level before PHRM 314.*

NURS 516 Psychopathology and Human Behavior (3 credits)
This theory course examines the effects and/or sequels of alterations in selected bio-behavioral processes in the adult human suffering from illnesses with critical onsets and long-term unstable conditions. It focuses on the study of the brain and behavior and the neurological, physiological and biochemical foundations of cognition, mood and affect. Students will be exposed to advanced assessment skills, selected theories and research to identify complex psychiatric disorders and interventions utilizing case studies.

NURS 517 Models of Treatment-Psychotherapy (3 credits)
In this course, students learn the models of treatment of psychiatric and mental health disorders, and become trained on psychotherapeutic interventions in acute settings. Theories on individual psychotherapy, crisis intervention, group and family therapy are covered. This course has a clinical component where students do practicum in a psychiatric care department. In this course students learn the application of the acquired knowledge in the field of practice and start to practice their role.

NURS 518 Group and Family Psychotherapy (3 credits)

This course is complementary to the "Models of Treatment" course, and it focuses on group and family psychotherapeutic interventions. Students synthesize knowledge of theories in the provision of care to groups and families with complex psychiatric problems. Family and group intervention strategies are discussed in a variety of settings. Students explore the practice of these interventions in psychiatric care departments.

NURS 519 Clinical Residency in Acute Psychiatric Care (4 credits)
The purpose of this clinical practicum course is to provide opportunities for students to apply the content learned from courses. Students will use assessment skills, selected theories, and research to identify complex health problems and interventions for diverse populations. The focus is on advanced case management and practice of the role, which is further developed as the student integrates theory and practice skills in acute and chronic or community settings. Students will spend 224 hours of clinical hours under the supervision of a preceptor.

NURS 520 Managing Quality with Teams (3 credits)
This course addresses theory and application of quality teams, their composition, purposes, function, and decision making tools. Process improvement team and the use of mapping processes for process improvement are a main focus.

NURS 522 Principles and Practice of Community Health Nursing (3 credits)
This course introduces concepts and issues relevant to the advanced practice of public and community health nursing. Areas of focus include health promotion, management of chronic disease and health education. The course will use case studies in class and field work in the community.

NURS 523 Advanced Community Assessment and Interventions (3 credits)
This course focuses on the nursing assessment of the health of communities using a case based approach. Students are provided with advanced knowledge and skills in population and individual needs assessment and community based interventions. Clinical experience will be provided.

NURS 524 Clinical Residency in Public and Community Health Care (4 credits)
The purpose of this clinical course is to provide students with opportunities to apply content learned in community courses, with a focus on advanced case management and health promotion. Assessment skills, theories and research will be utilized in identifying health problems and planning community interventions. *Prerequisites: NURS 522 and NURS 523.*

NURS 525 Transformational Leadership for Nursing Practice (3 credits)
The purpose of this course is to promote critical thinking about, and utilization of, transformational leadership behaviors in nursing settings. The course encourages a reflective approach to cultivating an effective personal leadership style, with a particular emphasis on transformational leadership. Students will assess their leadership behaviors, develop strategies to improve, and practice targeted leadership behaviors. Students develop an evidence-based transformational leadership plan with short, medium and long-term objectives during the course.

NURS 527 Developing Health Service Programs (3 credits)
The purpose of this course is to introduce students to the development and implementation of programs/projects intended to improve practice and health system outcomes. The course will focus on

the theory and practice of organizational communication in its various forms - internal, external, informal and formal - and introduce conceptual approaches and techniques of program evaluation. Opportunities for gaining access to health service organizations for project work will be provided. Students will prepare a project plan as part of the course

NURS 528 Practicum (2 credits)
This is a practicum in which students apply the various roles of the advanced practice nurse in their area of specialty. The aim is to extend the clinical experiences obtained during the residency and enhance advanced practice competencies, in preparation for specialty certification.

NURS 526 Comprehensive Exam (zero credits)

NURS 598 Project (3 credits)
Special projects directed toward acquiring skills needed in the development of programs relevant to nursing care within the student's area of interest. Projects vary depending on the track of study.

NURS 599 Thesis (6 credits)

Non nursing courses required in the administration track.
HMPD 342 Financial Management and Accounting (3 credits): The course covers the basic skills of modern financial management and accounting, and the utilization of its concepts and tools to make decisions in health care organizations.

MNGT 332 Human Capital Management (3 credits): An advanced analysis of the human resource function and the challenge of managing human capital in a modern corporation. The course highlights the interrelationships of the different human resource management functions and the strategic role of the HR in today's environment, and capitalizes on new trends and actual case examples to illustrate current HR best practices.

Non nursing courses required for the minor in education
EDUC 318 Test Construction in Education (3 credits): Development of testing techniques and skills for appraisal of the cognitive and affective objectives of instruction. *Alternate years*.

EDUC 326 Theory and Design of Curriculum (3 credits): Examination of organization, scope, and sequence of curricula with special emphasis on various approaches to curriculum development. *Annually.*

Appendix B

1996 vs. 2011 Essentials for MS Nursing Education by CCNE

1996 essentials	2011 essentials
The 1996 essentials' document addresses 2 components: 1. Statement of essential core content for all MSN educated nurses 2. Statement of essential core content for all Advanced Practice Nurses (APNs) in direct care roles The 4 dominant titles for APNs are nurse practitioners (NP), clinical nurse specialists (CNS), certified nurse-midwife (CNM) and nurse anesthetist (NA). MSN programs in nursing administration and community health are included in the Model of Master's Nursing Curriculum. Students prepared in master's nursing programs in these two specialty areas are, in most cases, not prepared to provide direct client care; therefore, these two specialty areas of nursing education are not included under the APN Clinical Core. If a program, however, does prepare graduates in these specialty areas to provide direct client care, the students in the program should receive the content included in the advanced practice nursing clinical core.	The 2011 document addresses core for all MSN programs; provides curricular framework and elements regardless of focus or major practice; delineates outcomes expected of all MS graduates, not preparation for specific roles. There is no prescriptive directive on the design of MSN programs. Graduates of MSN programs build on their BSN knowledge and skills. For those seeking terminal degrees in the discipline, the new conceptualization for MSN education will allow seamless movement into a research or practice-focused doctoral program. MSN education prepares the graduate to: • Lead change for quality outcomes • Advance a culture of excellence through lifelong learning • Build and lead collaborative interprofessional care teams • Navigate and integrate care services across the healthcare system • Design innovative nursing practices • Translate evidence into practice
The 1996 essentials of Graduate Education in Nursing **Essential I: Research:** MS nurses are prepared to utilize new knowledge to provide high quality health care, initiate change, and improve nursing practice. Preparation in research utilization includes the evaluation of research, problem identification within the clinical practice setting, awareness of practice outcomes, and the clinical application of research.	**The 2011 essentials of Graduate Education in Nursing** **Essential I: Background for practice from Sciences and humanities.** MS nurse integrates scientific findings from nursing, biopsychosocial fields, genetics, public health, quality improvement, organizational sciences for continual improvement of nursing care across diverse settings.

The 1996 essentials of Graduate Education in Nursing	**The 2011 essentials of Graduate Education in Nursing**
Essential II: Health care policy, Organization, and Financing of Health Care: Graduates are prepared to provide quality cost-effective care, participate in the design and implementation of care in various health care systems, and assume a leadership role in managing human, fiscal, and physical health care resources.	**Essential II: Organizational and systems leadership**. The master's-prepared nurse must be able to analyze the impact of systems on patient outcomes, including analyzing error rates. These skills are critical to the promotion of high quality and safe patient care. Leadership skills are needed to emphasize ethical and critical decision making, effective working relationships, and a systems-perspective.
Essential III: Ethics: Students should develop an understanding of the principles, values and beliefs that provide a framework for nursing practice. Students are provided the opportunity to analyze systems of health care and determine how the values underpinning them and their own values influence the interventions and care delivered.	**Essential III: Quality improvement and safety:** MS nurse must be articulate in the methods, tools, performance measures, & standards related to quality, & prepared to apply quality principles within an organization.
IV: Professional role development: This content operationalizes the theoretical principles and norms within the graduate's specialty area of practice, to provide the student with a clear understanding of the nursing profession, advanced practice nursing roles, the requirements for, and regulation of these roles.	**Essential: IV: Translating and integrating scholarship into practice**: MS nurse applies research outcomes within the practice setting, resolves practice problems, works as change agent and disseminate results.
Essential V: Theoretical foundations of nursing practice: The graduate should be prepared to critique, evaluate, and utilize appropriate theory within one's practice. Nursing practice integrates and applies a wide range of theories from nursing and other sciences. The master's nursing curriculum should include nursing and other relevant theories from a wide range of fields such as the natural, social, organizational, and biological sciences.	**Essential V: Informatics & healthcare technologies**: MS nurse uses patient –care technologies to deliver and enhance care and uses communication technologies to integrate and coordinate care.

The 1996 essentials of Graduate Education in Nursing	**The 2011 essentials of Graduate Education in Nursing**
Essential VI: Human diversity and social issues: students must develop an understanding and appreciation of human diversity in health and illness and to assure the delivery of appropriate or individualized health care. Diverse learning experiences must be provided throughout the curriculum and clinical practice to develop an understanding of the wide diversity of subcultural influences on human behavior, including ethnic, racial, gender, and age differences. **Essential VII: Health promotion and disease prevention:** Graduate education should prepare nurses with a strong theoretical foundation in health promotion, illness prevention, and maintenance of function across the health-illness continuum with clients: the individual, family, or community. Health promotion and disease prevention must also be an integral part of graduate nursing practice. Each essential has associated program outcomes and sample content	**Essential VI: Health policy and advocacy**: MS nurse is able to intervene at the system level through the policy development process and employ advocacy strategies to influence health and health care **Essential VII: interprofessional collaboration for improving patient and population health outcomes:** MS nurse member of interprofessional team, communicates, collaborates an consults with other health professionals to manage and coordinate care **Essential VIII: Clinical prevention and population health for improving health**: MS nurse applies and integrates broad, organizational, client-centered and culturally appropriate concepts in the planning, delivery, management and services to individuals, families, and aggregates/identified populations **Essential IX: Masters-level Nursing practice**: Nursing practice at MS level is broadly defined as any form of nursing intervention that influences healthcare outcomes for individuals, populations, or systems. MS graduates have advanced level of understanding of nursing and relevant sciences as well as the ability to integrate this knowledge into practice. Nursing interventions include both direct and indirect care components. Each essential has associated program outcomes and sample content

1996 Model of Master's Nursing Curriculum	**2011 Model of Master's Nursing Curriculum**
Graduate Nursing Core (All master's degree nursing students) • **Administration** • **APN Clinical Core** (All master's degree nursing students prepared to provide direct client care) • **Community Health** (All master's degree nursing students prepared to provide population-based care) **Specialty Curricula** **CNM; CRNA; CNS; NP (Primary Care NP Acute Care NP)**	**Masters Graduate Nursing Core** (All master's degree nursing students) • Direct care core -> competencies for direct care roles • Competencies for indirect care practice roles (those that primarily focus on aggregates, systems, and organizations) • Didactic and supervised clinical experiences to demonstrate integration of advanced nursing knowledge in master's level nursing practice. All programs that prepare graduates for roles that have a component of direct care must have graduate level content in pathophysiology, health assessment, and pharmacology (coined the 3 Ps), as well as appropriate clinical experiences. The nurse educator is a direct care role and thus requires graduate level content in the 3 direct care core courses.
The master's curriculum is conceptualized as having three components: 1. **Graduate Nursing Core**: Foundational curriculum content deemed essential for all students who pursue a master's degree in nursing regardless of specialty or functional focus. 2. **Advanced Practice Nursing Core**: Essential content to provide direct client services at an advanced level. 3. **Specialty Curriculum Content**: Those clinical and didactic learning experiences identified and defined by the specialty nursing organizations.	The master's curriculum is conceptualized as having three components: 1. **Graduate Nursing Core**: foundational curriculum content deemed essential for all students who pursue a master's degree in nursing regardless of the functional focus. 2. **Direct Care Core:** essential content to provide direct patient services at an advanced level. 3. **Functional Area Content**: those clinical and didactic learning experiences identified and defined by professional nursing organizations and certification bodies for specific nursing roles or functions.
Advanced Practice Nursing Core Curriculum (the 3 Ps): I. Advanced Health/Physical Assessment II. Advanced Physiology/Pathophysiology III. Advanced Pharmacology The inclusion of a culminating or capstone experience in all master's programs is strongly recommended via a series of courses/ seminars, a performance improvement project, a comprehensive examination, or a thesis.	In addition to developing competence in the 2 essential core areas (graduate nursing and direct care), each graduate will have additional coursework in an area of practice or functional role. Nurse preparing for a role as educator need preparation in all 9 essentials including the 3 Ps, in addition to curriculum design and development, teaching methodologies, educational needs assessment, and learner centered theories and methods.

1996 Clinical experiences	**2011 Clinical/practice learning expectations**:
The advanced practice nursing student prepared in any of the current direct care provider roles must receive sufficient clinical experience to provide depth and breadth in a given specialty or with designated population(s). AACN endorses the minimum requirements defined by the specialty organizations for the individual APN roles. No organization has developed similar standards that define the minimum number of clinical hours required for CNS education programs. AACN believes that all APN students who will practice in a direct client care role, make diagnoses, prescribe therapeutic regimens, and be accountable for these decisions, should have a minimum of 500 hours in direct clinical practice during the education program.	All MSN graduates must have supervised (i.e. precepted experiences with faculty site visits) clinical experiences which are sufficient to demonstrate mastery of the essentials. The goals of the clinical experiences are to provide the learner with opportunities to: • Lead change to improve quality outcomes • Advance a culture of excellence through lifelong learning • Build and lead collaborative interprofessional care teams • Navigate and integrate care services across the healthcare system • Design innovative nursing practices • Translate evidence into practice Simulated experiences can also be used such as mass casualty events, simulated database problems, simulated interpersonal communication scenarios

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE
SCHOOL OF NURSING

NURS 500 NURSING THEORY

Fall Semester 2011-2012

Dr Michael Clinton, Professor in Nursing Science
Extension: 5956; Room 523 Rafic Hariri School of Nursing
mc42@aub.edu.lb

Fridays 9:00 – 11:00; Classroom 2, Rafic Hariri School of Nursing

This course engages you in critiquing, evaluating and utilizing a variety of theories from nursing and related fields. It is conducted to international standards of nursing scholarship and requires critical thinking about the relevance of theory to nursing practice. You will focus on a nursing theory of your choice and its application to your clinical specialty. This **two-credit** course complements **NURS 501: Foundations of Advanced Practice** and provides theoretical foundations for **NURS 502: Advanced Nursing Research**. It is best thought of as an advanced introduction to the place of theory in nursing practice and research. The work of nursing theorists and other scholars will be examined through a process of **personal inquiry.**

PREREQUISITES:

None

TEXTBOOK:

There is no set textbook for this course.

LEARNING OUTCOMES:

Upon completion of the course, the student will be able to:

1. Evaluate theories from nursing and related fields
2. Explain the characteristics of a theory of your choice
3. Practice application of the theory of your choice
4. Compare theory-based personal nursing interventions with standard care
5. Apply the personal inquiry process to your development as an advanced practitioner of nursing

TEACHING METHODS:

- Facilitation of personal inquiry
- Critique of theories used in nursing and related research
- Analysis of published research
- Personal reflection on the relevance of nursing theories to nursing practice

LEARNING ASSESSMENT:

- Class participation: 10 %
- Presentation on a selected nursing theory 40%
- Written paper on personal inquiry 50%

POLICIES:

1. All course requirements must be completed before grades are submitted for credit.
2. Students who miss more than one fifth of lecture hours will be asked to drop the course.
3. A student who misses an examination may request a make-up examination. The final decision for such requests will be taken by the course coordinator.
4. The passing grade for this course is "70".
5. Students are expected to abide by AUB's policy on student code of conduct (p. 3).

COURSE OUTLINE

1. Introduction (30th September)
    a. Mutual Introduction
    b. Introduction to the Course
        i. Course Outline
        ii. Semester Schedule
        iii. The personal inquiry process
        iv. Student assignments
        v. Preparation of a short case-study
        vi. Allocation/choice of seminar topics
        vii. The University of San Diego Nursing Theory webpage: http://www.sandiego.edu/academics/nursing/theory/#Theories

2. Conceptions of Nursing Knowledge (7th October)
    a. Clarification of concepts and assumptions:
        i. What are nursing frameworks/theories/models?
        ii. Do "nursing theories" differ from other theories? If so, how?
        iii. What makes a theory a "nursing theory"?
        iv. **For next week**: Select a "**nursing theory**" to use as the starting point for personal inquiry in this course (Refer to The University of San Diego Nursing Theory website) You may choose a theory developed by **a non-nursing scholar**. However, the theory you choose **must** have been used to conduct research into nursing practice.

3. Conceptions of Persons (14th October)
    a. Persons, nursing theories and care plans
        i. What is a person?
        ii. How are persons conceived of in nursing theories?

iii. Are the nursing interventions in your case studies consistent with conceptions of the person in i. and ii?
iv. How may the focus of nursing (person, family, community, population group) vary among practice settings?
v. What deep ethical issues arise in your nursing practice?
vi. Do nursing theories help to resolve practice dilemmas in your day-to-day practice?

4. Clarification of course work (21st October)
    a. Critical application of theory to practice
        i. Your classroom presentation
        ii. Iterative development of your case study
        iii. The personal inquiry process
        iv. Your written assignment

PREPARATION WEEK (28th October) NO CLASS

5. An Early Nursing Theorist – Florence Nightingale (4th November)
    a. Nightingale's Notes on Nursing
        i. Brief outline of your case study
        ii. Which of Florence Nightingale's ideas are relevant to your case study?
        iii. How has the concept of the environment changed from Nightingale's time?
        iv. Which nursing interventions are consistent with Nightingale's 'Notes on nursing'?

6. Anthropological Models – Madeleine Leininger (11th November) **Myrna Saadeh; Serpouhi Toriquian; Solange Choueifaty**
    a. The Transcultural Nursing Model:
        i. Brief outline of your case study
        ii. Describe the key concepts in the model?
        iii. What contribution has the model made to research?
        iv. How would you apply the Transcultural Nursing Model to your case study?

7. Humanistic Models I – Rosmary Parse (18th November)
    a. The Theory of Human Becoming
        i. Brief outline of your case study
        ii. What contribution has the model made to nursing scholarship?
        iii. How would you apply the Theory of Human Becoming to your case study?

8. Humanistic Models II – Jean Watson (25th November)

a. Watson's Caring Theory
    i. Brief outline of your case study
    ii. What can we learn from the model about what it is to be a person?
    iii. What contribution has the model made to nursing scholarship?
    iv. How would you apply the Watson's Caring Theory to your case study?

9. Self-Care Models - Dorethea Orem (2nd December)
    a. Self-Care Deficit Theory
        i. Brief outline of your case study
        ii. Explain the main concepts in the theory?
        iii. How would you apply the Self-Care Deficit Theory to your case study?
        iv. What difference does the model make to nursing your patient?

10. Systems Models – Betty Neuman (9th December) **Sukaina Hijou & Aimèe Khaled**
    a. The Neuman Systems Model
        i. Explain the main concepts in the theory?
        ii. Describe the key elements of the theory
        iii. What contribution has the model made to conceptualizing nursing practice?
        iv. How would you apply the Neuman Systems Model to your case study?
        v. What difference would the model make to interventions used with your patient?
11. Bioethical Theories (16th December)
    a. Husted & Husted's Symphonological Bioethical Theory
        i. Describe the key elements of the model from the perspective of:) the patient; 2. the nurse
        ii. How would you apply the Symphonological Bioethical Theory to your case study?
        iii. What difference would the model make to interventions used with your patient?

12. Workshop on Draft Assignments (23rd December)
    a. Discussion of work in progress
        i. How have the theories/models discussed in the course influenced the nursing interventions in your case study?
        ii. Which theory/model have you found the most useful when working on your case study?
        iii. Was it necessary to amend the model to apply it to your case study? If so, how?
        iv. What are the limitations of the model? (Explain from the perspective of your case study)

CHRISTMAS AND NEW YEAR VACATION

13. Conclusions (6th January 2012)
    a. Discuss with reference to the theories and models discussed during the course:
        i. What are the strengths of nursing theories?
        ii. What are their weaknesses?
        iii. What is the evidence for using nursing theories in practice?
        iv. What is the evidence for using nursing theories as a basis for research?

14. Next steps (13th January)
    a. Impact on practice:
        i. Have nurses exhausted the usefulness of nursing theories?
        ii. If, not what do we need to do to develop the next generation of nursing theories?
        iii. If so, what kind of theories do we need for practice relevant research and scholarship?
        iv. How could you use nursing theory in your MSN project?

READING PERIOD FOR FIRST SEMESTER 19th January, 2012.

ASSESSMENT

CLASS PARTICIPATION (10% of Course Grade)
Contribution to classroom discussion (10%)

CLASSROOM PRESENTATION (40% of Course Grade)
You will have responsibility for introducing the session of your choice. Please structure your presentation as follows:

1. Brief summary of case study (5%)
2. Summary of a selected theory including explanation of important concepts (10%)
3. An indication of how the selected theory can be applied in practice (15%)
4. Your thoughts on what the work of the nursing theorist tells us about the scope of nursing practice (10%)
5. How the theory can contribute to the nursing care of your patient (10%).

Creative presentations that involve a high level of classroom interaction and that stimulate lots of questions and comments will be highly regarded.

GUIDELINES FOR WRITTEN ASSIGNMENT (50% of Course Grade)

PURPOSE OF THE ASSIGNMENT:

To demonstrate competence in applying theory to nursing practice, by providing a personal synthesis of course material in a way that enhances the care of an individual patient. You will find this assignment easier to write if you start in the first or second week of the course and update your paper from week to week in light of discussion of topics relevant to your assignment. Please use your assignment to show how you have applied the personal inquiry process, introduced in the first session and posted on Moodle, to examine the relationship between theory and the development of nursing practice.

GENERAL REQUIREMENTS:

Write an account of using the personal inquiry process to show the place of theory in the development of advanced nursing practice. **Maximum length**: 2000 words, including a case study of not more than 500 words, presented in APA format in double spaced typewritten pages. The final paper is due **one week after the end of the course.**

SPECIFIC REQUIREMENTS:

1. **Introduction (5%)**
   Provide an overview of what will be covered and indicate the conclusion to be drawn from your case study of the application of a nursing theory to nursing practice. Justify your choice of nursing theory you mention its reference to nursing priorities in Lebanon.
2. **Experience (10%):** Describe an initial brief clinical case study (**500 words**, **please see instructions below**).
3. **Applicability (5%):** Explain how a nursing or related theory has added to your understanding of your case study.
4. **Deliberation (5%%):** Justify your choice of theory with reference to recently published research (**research published since 2006)**.
5. **Action (20%):** Specify how you can use the insights you have developed into your chosen theory to develop the nursing care of the patient in your case study.
6. **Grammar and syntax, and APA format (5%)** American Psychological Association (2001) *Publication manual of the American Psychological Association*. Washington: APA.

GUIDELINES FOR CASE STUDY (500 words)

Provide a description of the patient (pseudonym, age, gender, occupation, relevant medical and nursing history) and any significant others (spouse, children, other members of the household), reason for admission, diagnosis, initial treatment, current health status, current treatments, nursing management and interventions, prognosis. Include a summary of the current nursing care plan with reference to diagnoses, standard protocols, individual needs, family involvement, expected outcomes and any areas of concern or unresolved health needs. Use a nursing theory of your choice to structure this information.

Please **do not use** medical, nursing or other abbreviations. Set out all medical and nursing terms in full. Write in prose and **avoid bullet points and lists**.

STUDENT CONDUCT

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.

Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
   Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

SCHOOL OF NURSING

NURS 500: Theories, Concepts and Frameworks for Advanced Nursing Practice (REVISED)

Dr Michael Clinton, Professor
Extension: 5956; Room 523 Rafic Hariri School of Nursing
mc42@aub.edu.lb

Wednesdays 8:30 – 10:30; Classroom 2, Rafic Hariri School of Nursing

The purpose of this course is to introduce at an advanced level conceptual resources for advanced nursing practice. It is organized around four themes selected to encourage the application of selected theoretical frameworks to clinical practice, leading nurses, and developing more effective healthcare systems. This **two-credit** course complements **NURS 501: Foundations of Advanced Practice** and provides theoretical foundations relevant to all the tracks in the MSN program. The process of **personal inquiry guides learning in the course.** The course is structured around **four** organizing themes. II. **Fundamentals** including conceptions of science, nursing knowledge, and levels of abstraction. **II. Interdisciplinary theories** relevant to nurses and nursing. III. **The politics of health** including the role of nurses in policy making and system reform. IV. **Implications** for advancing practice, research, leadership, and system reform. The course assists participants to develop and demonstrate the competencies required for graduate studies and offers a foundation for more advanced study of the theoretical foundations of nursing and healthcare.

PREREQUISITES:

None

TEXTBOOK:

Butts, J. & Rich, K. (2015) *Philosophies and theories for advanced nursing practice.* 2nd edition. Sudbury, MA: Jones and Bartlett Learning.

Hamric, A.B., Spross, J.A. & Hadson, C.M. (2013) *Advanced nursing practice: An integrative approach.* 6th edition. Philadelphia: W.B. Saunders (Chapters: 11, 13 & 22). N.B. This is the required textbook for NURS 501: Foundations of Advanced Practice.

PRIMARY WEB BASED RESOURCE

The University of San Diego Nursing Theory webpage:
http;//www.sandiego.edu/academcis/nursing/theory/#Theories

LEARNING OUTCOMES:

Upon completion of the course, the student will be able to:

1. Explain why the status of nursing knowledge is in question
2. Identify the theoretical antecedents of selected theories used in nursing and related social and behavioral science disciplines
3. Examine the application of middle range theories in health promotion, behavioral change, family functioning, health maintenance
4. Use selected economic, political and ethical theories to analyze healthcare delivery
5. Demonstrate application of a selected theory to the care of a patient, the organization of advanced nursing practice, education, administration, policy development, or research.

TEACHING METHODS:

- Facilitation of personal inquiry
- Analysis of published research
- Critique of selected concepts, theories and frameworks
- Analysis of case studies

LEARNING ASSESSMENT:

- **Course participation: 10 %**
  - Verbal rapporteur on applications to community and public health nursing, clinical nursing, or nursing leadership of the content of a self-selected classroom session (5%)
  - Evidence-based posts to on-line course forum (videos, PowerPoint Presentations, research articles, personal commentaries, or initiation of discussion themes that engage other participants in discussion, debate, or collaboration. (5%)
- **Introduction of a seminar topic 40%**
- **Written paper demonstrating personal inquiry 50%**

POLICIES:

1. All course requirements must be completed by student before grades are submitted for credit.
2. Students who miss over one fifth of lecture hours will be asked to drop the course.
3. A student who misses an exam may request a make-up examination. The final decision for such requests will be taken by the course coordinator.
4. The passing grade for this course is "70".
5. Students are expected to abide by AUB's policy on student code of conduct (p. 3).

COURSE OUTLINE (The topics underlined will receive most attention)

I Fundamentals

1. Introduction to the Course
   a. Course outline, learning outcomes, assessed work
   b. Introduction to Philosophy of Science (Chapter 1)
   Nature of science
   Scientific methods

Intersubjectivity
Practice implications of philosophies of science

2. Historical Overview of the Development of Nursing Knowledge
    a. Disciplinary Knowledge and Nursing Science (Chapter 2)
    Contestability of nursing knowledge
    The search for a "nursing" paradigm
    Ways of knowing in nursing
    Continuities and turns in conceptions of nursing
    Interdisciplinary or nursing knowledge development

3. Concepts, Models, Frameworks and Theories
    a. Levels of Conceptual Abstraction (Chapter 3)
    Components of nursing knowledge
    The knowledge hierarchy
    Knowledge informed practice
    Practice informed knowledge
    Deductive theories
    Inductive theories

II. Interdisciplinary Theories

4. Critical Theory and Emancipation
    a. Critical Theory and Emancipatory Knowledge (Chapter 7)
    Habermas and the Theory of Communicative Action
    The work of Chinn and Kramer
    Emancipatory nursing knowledge
    Implications for ethical practice and research

5. Morality and Ethics
    a. Theories and Methods in Ethics (Chapter 9)
    Normative ethics
    Meta ethical questions
    The fact/value distinction
    Rule based theories
    Consequentialism
    Principlism
    Implications for ethical practice and scholarship

6. Education and Training
    a. Educational and Learning Theories (Chapter 10)

Behavioral learning theories
Cognitive learning theories
Information processing theories
Social learning theories and self-efficacy
Psychodynamic learning theories
Neuropsychology and learning
Implications for self-development and practice development

7. Health and Behavior
    a. Health Behavior Theories (Chapter 11)
    The Health-Beliefs model
    Theories of reasoned action
    The transtheoretical approach
    Social-cognitive models
    Social-ecological models
    Implications for advanced nursing practice

8. Health and Resources
    a. Economic Theories (Chapter 14)
    Economic concepts: demand, supply, market equilibrium
    Health as an economic good
    Market failure
    Economic analyses of health interventions
    Cost analyses
    Ethical considerations

9. Organizing and Leading Healthcare
    a. Theories of Organizational Behavior and Leadership (Chapter 15)
    Contingency theory
    Organizational configuration
    Systems theories
    Change theory
    Theories X, Y, Z, and K
    The Full Spectrum Leadership Model
    Elements of Transformational Leadership
    Self-leadership
    Ethical considerations

III. The Politics of Health

10. Analyzing Health Politics and Policy Contexts

a. Global and National Perspectives
How do global health policies influence nursing practice?
Selected exemplars from the World Health Organization and national healthcare systems in developed countries
Ethical implications

11. Frameworks for Action on Politics and Policy
    a. Influencing Health Policy Reform
    How do nurses influence health reform?
    Selected exemplars from Lebanon and the Eastern Mediterranean region
    Ethical implications

IV. Implications for Advanced Nursing Practice

12. Advancing Nursing Knowledge
    a. Theory Evaluation and Testing (Chapter 24)
    Types of theories used in nursing
    Conceptual models for nursing practice
    Examples of nursing theories
    Theoretical antecedents of nursing theories
    Evaluation of theories used in nursing

13. Advancing Practice, Praxis and Leadership
    a. Using theory in Advancing Practice (Chapter 25)
    Applying theories in practice
    Research evidence
    Personal vignettes
    Next steps

CLASS PARTICIPATION (10% of Course Grade)

-

Course participation: 10 %

- Verbal rapporteur on applications to community and public health nursing, clinical nursing, or nursing leadership of the content of a self-selected classroom session (5%)
- Evidence-based posts to on-line course forum (videos, PowerPoint Presentations, research articles, personal commentaries, or initiation of discussion themes that engage other participants in discussion, debate, or collaboration. (5%)

INTRODUCTION OF A SEMINAR TOPIC (40% of Course Grade)

You will have responsibility for introducing a seminar of your choice. Your introduction should be short and focused (not more than 20 minutes. PowerPoint slides are not necessary, but you should prepare a short handout to cover the main elements of the theory you are introducing (not more than two pages). Your introduction should be structured as follows:

1. Summary of a selected theory (10%)
2. An indication of how the selected theory can be applied by clinical nurses, nurse educators, nurse researchers, or nurse administrators (10%)
3. Brief summary of a research study based on the theory published in an international peer reviewed journal: research question, results, conclusion, relevance to Advanced Nursing Practice (10%)
4. Explanation of the relationship between the theory and a nursing model or framework described on the University of San Diego Nursing Theory webpage (10%)

GUIDELINES FOR WRITTEN ASSIGNMENT (50% of Course Grade)

PURPOSE OF THE ASSIGNMENT:

To demonstrate competence in applying theory to practice provide a personal synthesis of seminar material considered in the course that has potential to enhance your advanced practice role. You will find this assignment easier to write if you start in the first or second week of the course and update your paper from week to week in light of your reading and classroom discussions. Please use your assignment to show how you have applied the personal inquiry process, introduced in the first session and posted on MOODLE, to develop a theoretically informed approach to a selected aspect of advanced practice.

GENERAL REQUIREMENTS:

Write an account of using the personal inquiry process to show the place of theory in the development of advanced nursing practice. **Maximum length**: 2000 words, including a case study of not more than 500 words, presented in APA format in double spaced typewritten pages. The final paper is due **one week after the end of the course.**

SPECIFIC REQUIREMENTS:

1. **Introduction (5%)**
   Provide an overview of what will be covered and indicate the conclusion to be drawn from your case study of the application of a theory to nursing practice (nursing practice includes: clinical nursing, community and public health nursing, nursing leadership, nursing administration, nurse education, professional development, empirical research, scholarship). Justify your choice of theory with reference to nursing and health priorities in Lebanon.
2. **Experience (10%):** Describe an initial brief clinical case study (**500 words**, **please see instructions below**).
3. **Applicability (5%):** Explain how a selected theory has added to your understanding of your case study.

4. **Deliberation (10%):** Justify your choice of theory with reference to:
    - Two recently published research articles (**research published in the past 12-18 months)**. 5%
    - Explanation of the relationship between the theory and a **nursing model or framework** described on the University of San Diego Nursing Theory webpage
5. **Action (15%):** Specify how you **have used or could use** your theoretically informed insights to enhance advanced practice outcomes.

6. **Grammar and syntax, and APA format (5%)** American Psychological Association (2010) *Publication manual of the American Psychological Association*. *6th Edition* Washington: APA. For a user friendly guide to complying with APA format requirements, access and bookmark the following URL: https://owl.english.purdue.edu/owl/resource/560/01/

GUIDELINES FOR CASE STUDY (500 words)

Provide a description of the patient (pseudonym, age, gender, occupation, relevant medical and nursing history) and any significant others (spouse, children, other members of the household), reason for admission, diagnosis, initial treatment, current health status, current treatments, nursing management and interventions, prognosis. Include a summary of the current nursing care plan with reference to diagnoses, standard protocols, individual needs, family involvement, expected outcomes and any areas of concern or unresolved health needs. Use a nursing theory of your choice to structure this information.

Alternatively (500 words)

Provide a description of a challenging event that has occurred in your work setting in the past 12 months: an ethical dilemma, a misunderstanding between colleagues, the introduction of a new policy or procedure, an organizational imperative, the publication of a new research article relevant to your practice, a successful leadership intervention. Describe what occurred, identify the stakeholders involved (be sure to protect anonymity), the challenges you experienced, and how you responded to them. Use a theory of your choice to structure this information.

FURTHER READING

One or more selected research articles directly relevant to the topic of the week and published in the past year will be uploaded on the MOODLE course page. Please use the link provided on the MOODLE page to upload articles or materials you have found. Participants who refer to these resources will receive a higher grade for course participation.

STUDENT CONDUCT

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use

notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.
In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.
Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).

b. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).

c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

MC, November 2014

Appendix E

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE

SCHOOL OF NURSING

NURS 501 Syllabus

FALL 2014-2015

Course No. & Title: NURS 501 Professional Foundation of Advanced Practice (3 credits).

Course Description:

This course is intended to provide the student with knowledge related to the advanced practice role. Students in this course develop a vision for Advanced Nursing Practice (ANP). The course concentrates on the foundations and philosophy of care in different health care settings. Legal and ethical issues related to ANP, standardization, regulation and interdisciplinary relationships are discussed. Students will also examine historical and contemporary roles in fostering advocacy and changes within the health care system.

Placement of Course:

This is a required course in the MSN program Fall semester. Room 103 - HSON

Faculty responsible for the course:

Laila F. Farhood PhD., C.S., RN, Professor
E-mail: lf00@aub.edu.lb
Ext. 5975

Course Objectives:

Upon the completion of the course, students will be able to:

1. Discuss the historical development of Advanced Nursing Practice (ANP).
2. Critically evaluate the context in which scientific knowledge develops.
3. Describe the roles and competencies of ANP including clinical, consulting, research, leadership, collaboration, change agent and ethical decision-maker.
4. Review the philosophy underlying advanced nursing practice.
5. Conceptualize and articulate the distinction between advanced and generalist nursing practice.

6. Analyze the impact of socio-cultural, economic and political issues on nursing practice and health care delivery.

7. Delineate components of bio-ethical and legal decision-making related to practice issues and collegial relationships.

8. Examine critically the relationship of health care ethics to social and health policy development and implementation.

9. Understand the principles underlying comprehensive professional regulation/standardization.

10. Evaluate research findings on advanced practice roles

Teaching Methods:

Lecture/seminar format, selected projects, readings and discussions of significance for nurses in advanced practice roles. Students are expected to read assignments prior to class and participate in discussion. Class attendance & participation are required.

Evaluation:

Seminar presentation	20%
Written assignments (paper)	40%
Book presentation	15%
Class participation	25%

Assignments:

Assignments 1: This assignment is 1-2 page paper in which you project your expectations in joining the MSN program. What roles characterize your advanced practice versus your presence generalist practice? This assignment offers a convincing and persuasive account of your future practice role.

Assignment 2: This paper addresses a controversial advanced practice issue related to your field of study. The issue should impact APN. As if you are writing a manuscript for publication: Get the instruction of authors from the journal follow the journal's instruction to write the manuscript i.e. abstract, format for references, etc… The following should be followed:

Introduction: State the nature of the issue clearly. Discuss the relevance of the issue to advanced practice nursing. This issue being forced in your present role and expect to realize at an advanced level.

Background: Present information on the issue and any historical material if appropriate.

Both sides of the issue or controversy: Present adequately and fairly. Include relevant theoretical/conceptual framework.

Discussion: Write the discussion clearly, and substantiate with relevant information of data.

The journal guidelines: Follow all of them.

References: Use pertinent references appropriately. Follow journal instructions for format of the references.

Text: Write "good" grammar, punctuation, and organize the text in a logical fashion. Grade will be based on professionalism, relevance, impact, coherency, organization, grammar and spelling in the paper.

Assignment 3: Position paper: This one page paper addresses your position w.r.t an advanced area of interest. Write down the pros, cons & rationale for your position. This paper helps you begins to think philosophically about clinical issues and how you plan to implement advanced roles and competencies of ANP in your advanced practice.

Seminar presentation: Consists of a group presentation (3-5) of an advanced role in different specialties. Evaluation is based on the content, clarity, organization, relevance and creativity.

Course Content:

Unit I:

Sept 3, 10, 2014	Orientation to the course . History and Evolution of Advanced Nursing Practice Historical aspects of ANP Conceptualization of ANP Definition/Education/Role development **(Chs. 1-4 Text, Ch. 2 & 3 Kenny)** **Students are expected to read these chs on their own**	Dr. L. Farhood
Sept, 17, 2014	Advanced Roles / ICN/ Global APN roles/ certification (Lebanon & Globally)	Dr. S. Noureddine

Unit II:

Sept., 24, Oct. 1,	Competencies/Expanded roles Philosophy of nursing science/practice **(Chs. 7-10 - Chs. 5-8 Text)**	Dr. L. Farhood
Oct. 5-7		**Al Adha Holiday**

Unit III

Oct. 8, 15, 2014	Selected Theories and Models for ANP	Dr. L. Farhood

	Theories of leadership Theories of teaching and learning Theories of change Models of health promotion Models of advanced practice nursing **(Ch. 11 & 12 Text, Ch. 14 Kenny)**	
Units IV & V		
Oct. 22, 29, 2014	Legal Aspects of APN Nurse-practice acts/legislative processes Professional negligence (Malpractice) Creating excellence in practice Credentialing APN **(Ch. 13 & 21 Text/Handouts)**	Dr. L. Farhood
Nov. 5, 2014	APN practice role environment & Certification (USA/Lebanon), Women's Health, Neuro role)	Dr. L. Farhood Guest Dr. L. Younan Guest Dr. H. Darwish-
Nov, 12, 2014	Specific Practice Roles	Dr. L. Farhood Guest Ms. A. Massouh Guest Mr. A. Shamoun
Nov. 19, 2014	Ethical Decision-Making in Practice Professional ethics Health care ethics: professional & moral leadership Selected ethical approaches Ethical dilemmas **(Ch. 11, 22 Text, Ch. 13 Kenny)**	Dr. L. Farhood
Unit VI:		
Nov, 26, 2014	Socio-cultural/Political Issues Health care and economic system Socio-cultural and political issues **(Ch. 23 Text, Chs. 15, 17 & 18 Kenny)**	Dr. L. Farhood
Unit VII:		
Dec 3, 2014	Interdisciplinary Relationship Health care system change Rights, obligations Evidence –Based Practice/Interrelationship Between Theory, Research and Practice. Developing a collective vision of Advanced Nursing Practice outcome evaluation and performance Improvement **(Ch. 25 text Unit VI Kenny)**	Dr. L. Farhood
Dec. 10, 17, 2014		

Concepts to be integrated in lectures and student presentations: Dr. L. Farhood

- Issues in the Continuing Evolution of Advanced Nursing Practice
- Faculty practice
- Health policy issues
- Developing markets for ANP – CNS, ANP (case manager, consultant, educator, and researcher)
- Administrative justification and support for ANP
- Collaborative practice (multidisciplinary guidelines)
- Clinical research in the advanced practice role
- Publishing scholarly works
- Creating excellence in practice/clinical pathways
- Evaluating APN
  (Ch. 21, 25 & 26 Text, Ch. 19 Kenny)

TBA Book class presentation "From Silence to voice"
Student presentations start week (Sept. 24, 2014) and continues throughout the semester.

STUDENT CONDUCT

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.
In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.
Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
   Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

LF/er - September 2014

Appendix F

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE
HARIRI SCHOOL OF NURSING
NURS 501 Syllabus
(REVISED)

Course No. & Title: NURS 501 Advanced Nursing Practice: Scope and Roles (2 credits).

Course Description:
This course is intended to provide the student with knowledge related to the advanced practice role. Students develop a vision and structure for Advanced Nursing Practice (APN) which includes the Consensus Model for Advanced Practice Registered Nurse (APRN), regulation, credentialing, and emerging professional issues facing APN roles. The course concentrates on the foundations and philosophy of care in different specialties and health care settings. Legal and ethical issues related to ANP, and interdisciplinary relationships are highlighted. This **two-credit** course complements **NURS 500: Theories, Concepts and Frameworks for Advanced Nursing practice.** It provides theoretical foundations relevant to all the tracks in the MSN program and serves as a guide to designing relevant courses on all the facets of advanced practice.

Placement of Course:
This is a required course in the MSN program fall semester.

Faculty responsible for the course:
Laila F. Farhood PhD., C.S., RN, Professor
E-mail: lf00@aub.edu.lb
Ext. 5975

Course Objectives:
Upon the completion of the course, students will be able to:
1. Discuss the historical development of Advanced Nursing Practice (ANP).
2. Describe the roles and competencies of advanced practice nurses including clinical, consulting, research, leadership, collaboration, change agent and ethical decision-maker.
3. Review the philosophy underlying advanced nursing practice.
4. Conceptualize and articulate the distinction between advanced and generalist nursing practice.
5. Analyze the impact of socio-cultural, economic and political issues on nursing practice and health care delivery.
6. Examine critically the relationship of health care ethics to social and health policy development and implementation.
7. Discuss the principles underlying comprehensive professional regulation/standardization.
8. Evaluate research findings on advanced practice roles

Teaching Methods:

Lecture/seminar format, selected projects, readings and discussions of significance for nurses in advanced practice roles. Students are expected to read assignments prior to class and participate in discussion. Class attendance & participation are required.

Evaluation:

Seminar presentation	25%
Written assignments (paper)	40%
Book presentation	10%
Class participation	25%

Assignments:

Assignment 1: This paper addresses a controversial advanced practice issue related to your field of study. The issue should impact APN. As if you are writing a manuscript for publication: Get the instruction of authors from the journal follow the journal's instruction to write the manuscript (**max 5 pages**) i.e. abstract, format for references, etc… The following should be followed:

Introduction: State the nature of the issue clearly. Discuss the relevance of the issue to advanced practice nursing. This issue being forced in your present role and expect to realize at an advanced level.

Background: Present information on the issue and any historical material if appropriate.

Both sides of the issue or controversy: Present adequately and fairly. Include relevant theoretical/conceptual framework.

Discussion: Write the discussion clearly, and substantiate with relevant information of data.

The journal guidelines: Follow all of them.

References: Use pertinent references appropriately. Follow journal instructions for format of the references.

Text: Write "good" grammar, punctuation, and organize the text in a logical fashion. Grade will be based on professionalism, relevance, impact, coherency, organization, grammar and spelling in the paper.

Assignment 2: Position paper: This one page paper addresses your position w.r.t an advanced area of interest. Write down the pros, cons & rationale for your position. This paper helps you begins to think philosophically about clinical issues and how you plan to implement advanced roles and competencies of ANP in your advanced practice.

Seminar presentation: Consists of a group presentation (3-5) of an advanced role in different specialties. Evaluation is based on the content, clarity, organization, relevance and creativity.

Course Content:

Unit I:

Orientation to the course.

History and Evolution of Advanced Nursing Practice
Historical aspects of ANP
Conceptualization of ANP
Definition/Education/Role development
(Chs. 1-4 Text, Ch. 2 & 3 Kenny)
Students are expected to read these chs on their own

Unit II: Advanced Roles / ICN/ Global, Consensus Model for Advanced Practice
APN roles/ certification (Lebanon & Globally)
Competencies/Expanded roles
Philosophy of nursing science/practice
(Chs. 7-10 - Chs. 5-8 Text)

Unit III

Selected Theories and Models for ANP
Models of advanced practice nursing
(Ch. 11 & 12 Text, Ch. 14 Kenny)

Unit IV

Legal Aspects of APN
Nurse-practice acts/legislative processes
Professional negligence (Malpractice)
Creating excellence in practice
Credentialing APN
(Ch. 13 & 21 Text/Handouts)

Unit V

APN practice role environment & Certification
(USA/Lebanon) (e.g. Women's Health, Neuro role)
(Ch. 14, 21)
Specific Practice Roles (Lebanon-AUBMC)

Unit VI

Ethical Decision-Making in **Advanced Nursing** Practice
Professional ethics
Health care ethics: professional & moral leadership
Selected ethical approaches
Ethical dilemmas
(Chs. 13 & 21 Text, Ch. 13 Kenny)

Unit VII:

Socio-cultural/Political Issues
Health care and economic system
(Ch. 22 Text, Chs. 15, 17 & 18 Kenny)

Unit VIII:

Interdisciplinary Relationship
Leadership and team buidling
Evidence –Based Practice/Interrelationship between Theory, Research and Practice.
Developing a collective vision of Advanced Nursing Practice
Outcome evaluation and performance Improvement.
(Chs. 22 & 23 text Kenny)

Concepts to be integrated in lectures and student presentations:

- Issues in the Continuing Evolution of Advanced Nursing Practice
- Faculty practice
- Developing markets for ANP – CNS, ANP (case manager, consultant, educator, and researcher)
- Administrative justification and support for ANP
- Collaborative practice (multidisciplinary guidelines)
- Clinical research in the advanced practice role
- Publishing scholarly works
- Creating excellence in practice/clinical pathways
- Evaluating APN
  (Ch. 20, 23 & 26 Text, Ch. 19 Kenny)

TBA Book class presentation "From Silence to voice"
Student presentations

STUDENT CONDUCT

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.
In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.
Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).

   Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).

c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

Appendix G

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE

HARIRI SCHOOL OF NURSING
(NEW COURSE)

Course number and title: N530: Statistical Reasoning and Application in Nursing Research

Number of credits: 2 credits. Lecture (one hour) and computer lab (2 hours) (unless stated otherwise)

Course Description: This class introduces students to the basic concepts and applications of statistics for nursing research and how to carry these applications using SPSS. The emphasis is on interpretation and application rather than theoretical details. The course starts with an overview of types of data, data management, descriptive statistics and introduction to probability. The course then introduces the concepts of inferential statistics with a main focus on t tests, ANOVA, chi-squared tests, Fisher's exact test and the assumptions underlying those tests. Last, students will be introduced to simple and multiple linear regression analyses and applications. The primary objective of the course is to provide students with the skills necessary to *understand* basic statistical analyses and *carry out* those analyses using SPSS. The course does not require memorization of lengthy statistical formulae.

Learning outcomes:

At the end of this course students will be able to:

1. Perform descriptive techniques commonly used for various types of data used in nursing research
2. Describe the concepts of the binomial and the normal distributions and sampling distributions
3. Conduct hypothesis tests comparing means and proportions using inferential statistical tests in SPSS
4. Conduct simple and multiple linear regression analyses using SPSS
5. Apply appropriate statistical tests to select research questions in the field of study
6. Critically appraise biostatistical literature in nursing research

Teaching methods: Biostatistics for Nursing Research I is taught in a dynamic learning environment consisting of didactic lectures, hands-on exercises and SPSS lab sessions. Moreover, students will engage in small-group discussions to critically appraise selected published nursing articles from a statistical point of view.

Faculty: Souha Fares, PhD; telephone: 5980; email: sf31@aub.edu.lb

Learning assessment:

Students will be evaluated on the following

- **Homework (30%)** meet outcomes 1-6: Home works are an opportunity for the students to practice their skills and check their understanding of the material. They will be a combination of problem solving, interpreting analyses published in nursing journals and conducting the analysis

of a given dataset using SPSS. Homework will be posted on moodle one month before the due date; I highly recommend that you start working on them early on.

- **Midterm on XXdateXX (30%)** meets outcomes 1-3: It is a multiple choice test designed to check the students' grasp of the basic biostatistical concepts discussed in class and their understanding of published analyses and SPSS output
- **Final (30%)** meets outcomes 3-5: It is a multiple choice test designed to check the students' grasp of the basic biostatistical concepts discussed in class and their understanding of published analyses and SPSS output
- **Attendance and participation in class (10%)** meets outcomes 1-6: You will be graded on your active attendance. i.e. your involvement in class discussions, asking and answering questions raised during the lectures or the lab sessions.

Required textbook:

- No textbook is required.

Recommended readings:

Munro B.: Statistical Methods for Health Care research, 3rd Edition. Lippincott, New York, 1997

Polit D.: Data Analysis & Statistics for Nursing Research, 7th Edition. Prentice Hall New Jersey, 1997

Moore D., McCabe G., Craig B.: An Introduction to Statistical Methods and Data Analysis, 4th Edition. Duxbury Press, California, 1993

D'agostino R., Sullivan L., Beiser A.: Introductory Applied Biostatistics, Brooks/Cole cengage learning, 2006

Daniel W. W. Biostatistics: A Foundation for Analysis in the Health Sciences, 7th Edition. John Wiley & Sons, New York, 1998

Moore D., McCabe G., Craig B.: Introduction to the Practice of Statistics, 6th Edition, W.H. Freeman and Company, New York, 2009

Schedule of sessions:

Week1:

- Session 1: Lecture1 - Introduction
  - General biostatistics concepts
  - Basic definitions (population, sample, variables, …)
  - Types of data
- Session 2: Lab - Intro to SPSS and data management with SPSS
  - Introduction to the windows of SPSS
  - Reading and entering data into SPSS
  - Labeling variables and values

- Recoding variables
- Computing new variables

Week2:

- Session 3: Lecture2 - Descriptive statistics (I)
  - Summarize one continuous variable with numbers
  - Display one continuous variable with graphs
  - Summarize one categorical variable with numbers
  - Display one categorical variable with graphs
- Session 4: Lab - Descriptive statistics (I) with SPSS

Week3:

- Session 5: Lecture2 - Descriptive statistics (II)
  - Two-way tables (two categorical variables)
  - Correlation (two continuous variables)
  - Describing one continuous and one categorical variable
- Session 6: Lab - Descriptive statistics (II) with SPSS

Week4:

- Sessions 7 & 8: Lecture 3: Basic probability theory and test diagnostics
  - Definition of probability, properties, laws of probability
  - Test Diagnostics (PVP, PVN, Sensitivity, Specificity)

Homework 1 is due

Week5:

- Session 9: Lecture4 - Inferential statistics for continuous data (I)
  - The normal distribution
  - Data transformation to near normality
  - Sampling distributions of population means
- Session 10: Lecture4 - Inferential statistics for continuous data (II)
  - The t distribution
  - T tests

Week6:

- Session 11: Lecture4 - Inferential statistics for continuous data (III)
  - One way analysis of variance (ANOVA)
  - ANOVA post hoc tests (Bonferroni)
- Session 12: Lab - Inferential statistics for continuous data using SPSS

Week7:

- Session 13 - Biostatistics Journal Club
- Session 14: Lecture5 - Inferential statistics for categorical data (I)
  - The binomial distribution
  - Z tests for proportions

Homework 2 is due

Week 8: Midterm

Week9:

- Session 15: Lecture5 - Inferential statistics for categorical data (II)
  - Chi-squared tests
  - Fisher exact test
  - Mcnemar test
- Session 16: Lab - Inferential statistics for categorical data using SPSS

Week 10:

- Session 17: Lecture 6 – Simple linear regression
  - Introduction to regression analysis
  - Simple linear regression
- Session 18: Lecture 7 – Multiple linear regression

Week 11:

- Session 19: Lab – Simple and multiple linear regression
- Session 20: Biostatistics Journal Club

Homework 3 is due

Week 12:

- Session 21: Review
  - Review of the statistical techniques covered in class
- Session 22: Lab
  - Using the statistical concepts covered in the course, we will use SPSS to answer questions on a given nursing dataset

Course policies:

1. All course requirements must be completed by the students before grades are submitted for credit.
2. Students who miss over one fifth of lecture hours will be asked to drop the course.
3. A student who misses an exam may request a makeup examination. The final decision for such requests will be taken by the course coordinator.
4. The passing grade for this course is "70".
5. Students are expected to abide by AUB's policy on student code of conduct.

Moodle:

All the required course work can be accessed on Moodle

Student conduct:

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.
Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
   Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

SF/September 2014

Appendix H

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE
HARIRI SCHOOL OF NURSING
N. 502 ADVANCED NURSING RESEARCH
(CURRENT COURSE)

SPRING 2013-2014

Course Number and Title: N. 502 Advanced Nursing Research

Number of Credits: 4 credits

Catalogue Description:
This course focuses on complex research designs and analysis of multiple variables. Emphasis will be placed on techniques for control of variables, data analysis, and interpretation of results. The interrelationship of theoretical frameworks, design, sample selection, data collection instruments, and data analysis techniques will be analyzed in depth. Critical evaluation of research articles will be covered. Content will be discussed in terms of clinical nursing research problems. Utilization of research findings to promote evidence-based practice will be emphasized.

Placement of course:
Spring Semester.
Tuesday 4 – 5:50 pm- HSON Hisham Jaroudi Auditorium
Friday: 9:00 – 11:00 am-Classroom 103- Van Dyck.

Faculty Responsible for the Course:
Hala Darwish, PhD, RN. Room 514, Hariri School of Nursing. Extension 5938/7427
Pager: 1304. Email: hd30@aub.edu.lb

Souha Fares, PhD. Room 521, Hariri School of Nursing. Extension 5980
Email: sf31@aub.edu.lb

Learning Outcomes:
Upon completion of this course, students will be able to:
1. Select appropriate research design approaches to a variety of research problems.
2. Synthesize findings from the literature to determine their relevance for enhancing the scientific basis of nursing practice.
3. Appraise simple and complex sample selection techniques appropriately, with an analysis of the strengths and weaknesses of each.

4. Evaluate reliability, validity and sensitivity of measurement instruments.
5. Demonstrate ability to critique research reports.
6. Appraise methods for data analysis appropriate for selected research designs.
7. Interpret computerized outputs of various statistical analyses.
8. Develop a research proposal applicable to nursing practice.
9. Demonstrate an understanding of interdisciplinary, clinically based research.
10. Demonstrate the ability to communicate research findings relevant to clinical practice.
11. Explain the importance of ethics in research practice.
12. Discuss ethical issues ranging from plagiarism and intellectual property to human research

Teaching Methods:

Several teaching techniques will be used. There will be lectures by the instructors to cover the content. Students will be asked to share their research ideas with the class. Discussion forums using Moodle will be used to discuss materials on line. A number of assignments related to course content are used. The instructors will be available for individual help with assignments.

Learning Assessment:

1.	Class participation.	5 %
2.	Human protection assignment	5 %
3.	Literature search assignment	5 %
4.	Data analysis assignment	10 %
5.	Group presentation critique	15 %
6.	Proposal paper	30 %
7.	Tests	30 %

The style for use in all written work is the Publication Manual of the American Psychological Association (6th ed.). Washington DC, American Psychological Association.

Description of Assignments:

1. Class participation. Students are expected to come prepared and participate in classroom activities. Grading will be based on informed participation in class discussions, facilitation of classmates' knowledge, and evidence of using the content of this course. Emphasis will be on substantive and thoughtful participation. The course is put on Moodle and assignments will be handled via Moodle. Lecture outlines and assigned readings will also be put on Moodle. Participation will also include students' logging into the course.

2. Literature search. Each student will identify a nursing practice problem in his/her field. Using Medline, Pub Med or the CINAHL database, the student submits a summary of the search method used related to the research problem, with a statement of the problem or research question, the data base used, keywords and limits, and a list of 10-15 relevant research based articles that are not more than 5-10 years old, using APA format. This assignment is due February 18, 2014.

3. Human protection assignment: It is an institutional requirement that all Principal Investigators, co-investigators, research assistants, research coordinators, nurses, students, residents, fellows, statisticians and other personnel who plan to conduct research studies involving human subjects complete the required web-based courses offered by the Collaborative Institutions Training Initiatives (CITI) Program. The required courses are available at the CITI web-site: https://www.citiprogram.org/Default.asp.
Biomedical investigators should complete the Biomedical Responsible Conduct of Research, Basic Course; Social and Behavioral Science investigators should complete the equivalent course on the responsible conduct of research in these disciplines. Students must log in as students and complete the modules in their course; at the end of each module there is a quiz that you take and get a grade. This course should take around one hour. The passing rate to achieve certification is set at 75%, and the course allows for re-taking the quiz at the end of each module to improve one's fund of knowledge and score. After completing the course successfully you must request a certificate. A signed and dated copy of the CITI certificate should be submitted to the course coordinator with a copy kept for your records/future use. The certificate must be submitted February 28, 2014.

4. Data analysis assignment. From a set of computerized outputs, students will interpret the results of data analysis, explaining the statistical tests used and statistical significance. The data analysis assignment is due April 25, 2014.

5. Group presentation: critique of a research article. Groups of 2 to 3 students will orally present to the class a critique of research articles selected from the course pack. The critique will cover all major aspects of the research process as described in the guidelines for research critique. Consideration of utilization of the study findings must be included in the presentation. Estimated presentation time for each group is 20 minutes, followed by a 10 minute class discussion. A sign-up sheet for sets of articles will be available at the fourth week of class. Grading will be based on the quality of critique, thoroughness of analysis, and dialogue with peers. Guidelines for the critique are provided in the course syllabus.

5. Paper/Proposal. You will be asked to submit a term paper describing a research proposal. The background section of the proposal, including introduction, literature review and/or theoretical framework shall be submitted by March 18, 2014 for feedback from the faculty. The deadline for receipt of the completed proposal is May 5, 2014. The term paper must be submitted by 5:00 pm that day in order to avoid a penalty of 5 points grade reduction for each late day. Delays in typing or computer problems are NOT acceptable excuses. Please try to plan ahead. Guidelines for the paper are provided in the course syllabus.

6. Tests: Two tests will evaluate the students' knowledge of material covered class.

Important Note

Creativity and independent action are the keys to success in this class. You may select any research topic relevant to nursing that you wish. There are many ways to develop it into a research design. The course content and experiences will guide you. We want you to do well. Budget your time, organize your work early and you should be able to complete the term paper without major difficulties. Do not hesitate to ask for help if you need it.

Also please note that all papers will be submitted through Moodle Turnitin for detection of plagiarism, I HAVE ZERO TOLERANCE TO PLAGIARISM! Any act of plagiarism intended or not intended will result in an academic warning.

Required Textbooks:

Polit, D.F. & Beck, C. T. (2012). *Nursing Research: Generating and Assembling Evidence for Nursing Practice.* (9th ed.) Philadelphia: Wolters Kluwer Heath and Lippincott Williams & Wilkins.

Additional Readings:

Wood, M.J and Ross-Kerr, J.C, (2011). *Basic Steps in Planning Nursing Research: From Question to Proposal* (7th Ed).Sudbury, Jones and Bartlett.

Darwish, H and Noureddine, S. Course Reader. (These readings are posted on Moodle).

Class Schedule

Date	Topic	Faculty	Reading
Tuesday. January 28,2014	Introduction to the course. History of Nursing Research	H. Darwish	Polit & Beck: Chapter 1.
F. January 31,2014	Review of the Research Process: Key concepts and Steps in Research.	H. Darwish	Polit & Beck: Chapter 3
Tuesday. February 4	Research problems, questions and hypotheses	S. Fares	Polit & Beck: Chapter 4
F. February 7	Research problems, questions and hypotheses continued Research literature review and critiquing evidence	H. Darwish	Polit & Beck: Chapter 4 Polit & Beck: Chapter 5

F. May 2	Student presentations		Articles presented
M. May 5	*Research proposal due*		
T. May 13	*Exam II*		

Unit Specific Learning Outcomes

Unit I: History of Nursing Research

1. Describe ways in which research plays an important role in the nursing profession and discuss why learning about nursing research is important to practicing nurses.
2. Discuss general trends in the evolution of nursing research.
3. Identify several areas of high priority for nurse researchers.
4. Distinguish basic and applied research.

Unit II: Review of the research process:

1. Distinguish independent and dependent variables.
2. Differentiate between dictionary and operational definitions of a variable.
3. Describe the flow and sequence of activities in quantitative and qualitative research.

Unit III: Research question and hypotheses

Describe the process of developing and refining a research problem.

1. Identify aspects of the feasibility of studying a research problem.
2. Describe the function of research hypotheses and characteristics of a workable hypothesis.
3. Distinguish different types of hypotheses (e.g., simple versus complex, directional versus non-directional, research versus statistical).

Unit IV: Literature review

1. Describe several purposes of a literature review.
2. Explain the difference between a primary and a secondary source.
3. Identify several bibliographic aids for nursing research problems.
4. Perform a review of the literature on a given topic using an electronic database.

Unit V: Creation of a Theoretical Framework

1. Distinguish between theories, conceptual models, and frameworks.
2. Identify several conceptual models of nursing and several other conceptual models frequently used by nurse researchers.
3. Explain how theories are tested, fitted to a research problem, and developed.

Unit VI: Ethical Aspects of Nursing Research

1. Discuss the historical background that led to the creation of various codes of ethics.
2. Understand the nature of the conflict between ethics and scientific rigor and provide some specific examples of ethical dilemmas.
3. Identify some of the most salient costs and benefits of participating in a study from a participant's point of view.
4. Identify steps that can be undertaken to safeguard the confidentiality of study participants.
5. Describe informed consent and process consent.
6. Describe the role of Institutional Review Board (IRBs) in the review of research plans.
7. Explain the importance of ethics in research practice.

8. Discuss ethical issues ranging from plagiarism and intellectual property to human research

Unit VII: Selecting A Research Design

1. Discuss the various aspects of research design.
2. Distinguish between and evaluate cross-sectional and longitudinal designs.
3. Distinguish between and evaluate prospective and retrospective designs.
4. Describe the characteristics of a good research design.

Unit VIII: Quantitative Designs

1. Describe the characteristics of the experiments, quasi-experiments, and pre-experiments.
2. Describe the process by which subjects are randomly assigned to groups.
3. Identify several specific experimental, quasi-experimental, and non-experimental designs.
4. Describe the purpose of survey research and the types of data collection approaches it uses.
5. Describe the purposes and approaches of secondary analyses, and discuss their advantages and limitations.
6. Describe the general aims of meta-analysis.
7. Describe various aspects of research control.
8. Evaluate the strengths and weaknesses of the alternative methods of controlling extraneous variables.
9. Distinguish between internal and external validity.
10. Identify types of analyses that can be undertaken to detect threats to internal validity.

Unit IX: Qualitative Research Designs

1. Identify areas in which a qualitative researcher can plan for broad design contingencies.
2. Identify the major research traditions for qualitative research, and describe the domain of inquiry of each.
3. Describe the basic characteristics of ethnographic, phenomenological, and grounded theory studies.

Unit X: Sampling Designs

1. Distinguish between nonprobability and probability samples.
2. Identify considerations to be kept in mind in deciding sample size in a quantitative study.
3. Describe the steps in selecting a sample in a quantitative study.
4. Identify several approaches to theoretical/purposive sampling in qualitative studies.
5. Describe the purpose of power analysis.

Unit XI: Data Collection Methods

1. Identify the four main dimensions of data collection approaches.
2. Identify the three main types of data collection methods for nursing research (self-reports, observation, and biophysiologic measures), and recognize their major strengths and weaknesses.
3. Identify the major considerations in selecting a specific instrument (conceptual relevance, quality, resource limitations, etc.)
4. Describe the purpose of pretesting an instrument package.

Unit XII: Assessing Data Quality (Validity and Reliability)

1. Describe the major characteristics and the major advantages of measurement.
2. Identify several major sources of measurement error.
3. Describe three different aspects of reliability, and specify how each aspect can be assessed.
4. Interpret the meaning of correlation coefficients and reliability coefficients.
5. Identify several other criteria for assessing measuring tools.
6. Identify and describe approaches to improving the dependability of qualitative data.

Unit XIII: Quantitative Analysis – Data Reduction

1. Distinguish descriptive and inferential statistics.
2. Identify the four levels of measurement, and describe the characteristics of each.
3. Describe the meaning and interpretation of a standard deviation.
4. Identify the levels of measurement associated with different descriptive statistics.
5. Interpret computer printouts for selected descriptive statistics.
6. Describe the concept of a sampling distribution.
7. Describe the logic and purpose of the null hypothesis.
8. Distinguish between Type I and Type II errors.
9. Distinguish between parametric and nonparametric statistical tests.
10. Describe hypothesis testing procedures.
11. Specify the appropriate applications for t-tests, ANOVA, chi-square, and correlation coefficients, and interpret the meaning of the calculated statistics.
12. Identify the levels of measurement associated with various parametric and non-parametric tests.
13. Describe the applications, principles, and general procedures of simple and multiple linear regressions.

Unit XIV: Design and Implementation of a Quantitative Data Analysis Strategy

1. Describe the major phases in the analysis of quantitative data.
2. Discuss the steps required to prepare data for computer analysis.
3. Describe strategies for interpreting hypothesized, unhypothesized, or mixed results.
4. Distinguish practical and statistical significance.

Unit XV: Qualitative Data Analysis

1. Describe some of the challenges that a qualitative analyst faces.
2. Distinguish four prototypical qualitative analysis styles.
3. Describe the four intellectual processes that typically play a role in qualitative analysis.
4. Discuss the activities that researchers perform to manage and organize qualitative data.
5. Describe the basic procedures used to analyze qualitative data.

Unit XVI: Intervention and Outcomes Research

1. Discuss the challenges and limitations of conducting true experiments on humans.
2. Describe the process of intervention research: Project planning, gathering information, developing an intervention theory, designing and testing the intervention, collection and analysis of data, and dissemination.
3. Define and identify the prerequisites of evidence-based practice.
4. Discuss the theoretical basis of outcomes research.
5. Distinguish evaluation of outcomes, process and structure.

6. Identify methodologies for **mixed methods** studies in terms of sampling, strategies/designs, measurement methods and statistical methods.

Unit XVII: Critiquing Research Reports

1. Describe the functions of a research critique.
2. Discuss methodologic decisions amenable to criticism that designing a study involves.
3. Identify the main dimensions of a research critique (substantive, theoretical, methodologic, interpretive, ethical and stylistic).
4. Evaluate a research report along the above main dimensions.

Unit XVIII: Communication of Research Reports

1. Identify and describe the major sections of a research report.
2. Compare and contrast several types of research reports.
3. Identify the elements necessary for a successful poster presentation.
4. Describe the style appropriate to a research report.

Unit XIX: Evidence Based Nursing

1. Describe a continuum along which research utilization can occur.
2. Discuss the current status of research utilization within nursing.
3. Identify barriers to utilizing nursing research.
4. Propose three or four strategies to improve the utilization of nursing research findings for researchers, educators, practicing nurses, nursing students, and administrators.

Student conduct

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.
Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
d. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
b. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

Guidelines for the research proposal

The outline for the proposal is as follows:

- **I.** Introduction. What is your major focal area? What is the problem under study? What is the population affected? What is the significance of studying this problem? End this section with a statement of the purpose of your study.
- **II.** Review of the Literature. This section should summarize literature relating to the topic and findings of previous studies similar to your proposed study. You may describe methods that others used in studies similar to yours. End the section by a summarizing paragraph pointing out the gaps in the literature and bringing forth the need for your study. Put here your specific research questions or hypotheses.
- **III.** Theoretical framework. The theoretical framework summarizes existing knowledge of concepts under study and provides a basis for predicting relationships among variables. You may use an already existing theory/model, or create your own model of the variables you are studying. Include in this section the conceptual definitions of all the variables that you are planning to study.
- **IV.** Research Design. This section describes the plan for the study and type of design, with rationale for your choice of the design. Identify in this section the variables as they relate to the design i.e. which ones are the independent, dependent, and extraneous or intervening variables.
- **V.** Sample Selection Techniques. This section describes the technique to be used in selecting the sample with explanation of the sampling design, inclusion/exclusion criteria and recruitment method.
- **VI.** Research instruments. Describe the instruments you will use for measuring all the study variables (Operational definitions). State the type of data (categorical vs. continuous). Describe data quality: Reliability and validity for each instrument for self-report measures; Sensitivity/specificity for physiological measures.
- **VII.** Procedure: Describe how you will conduct the study, including the number of times data will be collected, setting and method of data collection (who, what and where). Include here ethical considerations: Seeking IRB approval, informed consent.
- **VIII.** Proposed Analysis of Results: State what statistical tests you will use for summarizing the sample characteristics and answering the research questions or testing hypotheses. Include sample tables for how you might present data obtained in the study.
- **IX.** Conclusions and limitations. What are the specific conclusions one could make for support or lack of support of your hypotheses? What limitations in the study methods may influence the results? Are there implications for nursing practice, education or administration?
- **X.** References
- **XI.** Appendix. Include Research Instruments, consent forms, etc...

Guidelines for the Research Critique

I. Content of the Critique of a Research Article

A. Cite the research article (in American Psychological Association/APA format) that you will critique for this presentation. Note that the research article must be data based and published in a peer reviewed journal. A copy of the complete article must be turned in with your power point presentation outline.

B. State the primary purpose, research questions or hypotheses for the selected research article (if there is nothing mentioned in the article, write down your best guess).

C. Significance**:** Identify, define, and explain the significance of the clinical problem in the article. Did the researchers justify the importance of the study? How? Were they convincing?

D. Study Background and design.

1. Was the literature review comprehensive? Recent? Written in an organized manner?
2. What theoretical framework do you think was used for this study? Was it appropriate?
3. What is the research design used in the study? What are the advantages to this type of design? Would another design be more appropriate and why?

E. Sample.

1. What type of sampling design was used (probability/non probability)?
2. List and describe 3 sample selection inclusion criteria: (if not explicitly stated, what is your best guess?). List and describe 3 sample selection exclusion criteria.
3. How many subjects were actually studied? analyzed?
4. Did the authors justify their sample size and how?
    a. Availability (convenience sample)
    b. Other studies have used similar samples sizes.
    c. Power analysis.

F. Primary Variables

1. Define/describe the independent variable(s).
2. Define/describe the dependent variable(s).
3. Define/describe extraneous variable(s).
4. Phenomenon under investigation if it was a qualitative study.

G. Instruments

1. Name and describe one instrument for measuring the dependent variable and one for the independent variable, or describe the primary means of collecting data in case a qualitative design was used.
2. How was validity of the instruments reported? If this was not described, what would you do to check that the instrument was valid?
3. How did the researchers test the instrument reliability or did they only report tests done by previous authors? If reliability testing was not described, how do you think should the reliability of the instrument be addressed?

H. Describe the study procedures for data collection; would you be able to replicate the study based on the information given? Do you agree with the method used for data collection? Why or why not? Were ethical considerations attended to or addressed in the article?

I. Statistical Analysis

1. What was the level of measurement of the dependent variable?

2. What was the level of measurement of the independent variable(s)?

3. List the statistical test(s) used to test the study hypothesis(es)/answer the research questions

4. What type is/are the statistical test(s) named in question # 3 (Parametric; Non parametric)

J. Main results.

Give a brief summary of the main results of the study

K. Conclusion and Clinical Implications

1. What conclusions did the authors come to regarding the problem of interest? What clinical recommendations did they make about the problem?

2. Do you agree with the author's conclusions? Why or why not? Support your reasons for agreement/disagreement by indicating how the study met/failed to meet the criteria for the internal/external validity.

L. Presentation style of the article

1. Was there enough data present overall in the article for you to do a thorough critique?
2. Was the material organized in a logical manner?
3. Was the title appropriate for introducing the study?

M. Research utilization

Evaluate the utilization potential of the current study findings; can they be used in practice?

II. Creativity of presentation, group cohesiveness and appropriate use of audio visual aids.

These will be considered in evaluating the group presentation of the critique.

HD, SF, 2014

Appendix I

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE
HARIRI SCHOOL OF NURSING

N. 502 ADVANCED NURSING RESEARCH

(REVISED)

Course Number and Title: N. 502 Advanced Nursing Research

Number of credits: 3 credits

Catalogue Description:

This course focuses on complex research designs. Emphasis will be placed on techniques for control of variables, and interpretation of results. The interrelationship of theoretical frameworks, design, sample selection and data collection instruments, will be analyzed in depth. Critical evaluation of research articles will be covered. Content will be discussed in terms of clinical nursing research problems. Utilization of research findings to promote evidence-based practice will be emphasized.

Placement of course:

Spring Semester.
Tuesday 4 – 5:30 pm-
Friday: 9:00 – 10:30 am.

Faculty Responsible for the Course:

Hala Darwish, PhD, RN. Room 514, Hariri School of Nursing. Extension 5938/7427
Pager: 1304.
Email: hd30@aub.edu.lb

Souha Fares, PhD. Room 521, Hariri School of Nursing. Extension 5980
Email: sf31@aub.edu.lb

Learning Outcomes:

Upon completion of this course, students will be able to:

1. Select appropriate research design approaches to a variety of research problems.
2. Synthesize findings from the literature to determine their relevance for enhancing the scientific basis of nursing practice.
3. Demonstrate ability to critique research reports, including evaluation of design and measures.

4. Develop a research proposal applicable to nursing practice.
5. Demonstrate an understanding of interdisciplinary, clinically based research.
6. Demonstrate the ability to communicate research findings relevant to clinical practice.
7. Discuss ethical issues pertaining to research

Teaching Methods:
Several teaching techniques will be used. There will be lectures by the instructors to cover the content. Students will be asked to share their research ideas with the class. Discussion forums using Moodle will be used to discuss materials on line. A number of assignments related to course content are used. The instructors will be available for individual help with assignments.

Learning Assessment:

1. Class participation.	5 %
2. Human protection assignment	5 %
3. Literature search assignment	10 %
4. Group presentation critique	20 %
5. Proposal paper	30 %
6. Tests	30 %

The style for use in all written work is the Publication Manual of the American Psychological Association (6th ed.). Washington DC, American Psychological Association.

Description of Assignments:

1. **Class participation**. Students are expected to come prepared and participate in classroom activities. Grading will be based on informed participation in class discussions, facilitation of classmates' knowledge, and evidence of using the content of this course. Emphasis will be on substantive and thoughtful participation. The course is put on Moodle and assignments will be handled via Moodle. Lecture outlines and assigned readings will also be put on Moodle. Participation will also include students' logging into the course.

2. **Literature search**. Each student will identify a nursing practice problem in his/her field. Using Medline, Pub Med or the CINAHL database, the student submits a summary of the search method used related to the research problem, with a statement of the problem or research question, the data base used, keywords and limits, and a list of 10-15 relevant research based articles that are not more than 5-10 years old, using APA format. This assignment is due XXXX.

3. **Human protection assignment**: It is an institutional requirement that all Principal Investigators, co-investigators, research assistants, research coordinators, nurses, students, residents, fellows, statisticians and other personnel who plan to conduct research studies involving human subjects complete the required web-based courses offered by the Collaborative Institutions Training Initiatives (CITI) Program. The required courses are available at the CITI web-site: https://www.citiprogram.org/Default.asp.
Biomedical investigators should complete the Biomedical Responsible Conduct of Research, Basic Course; Social and Behavioral Science investigators should complete the equivalent course on the responsible conduct of research in these disciplines. Students must log in as students and complete the

modules in their course; at the end of each module there is a quiz that you take and get a grade. This course should take around one hour. The passing rate to achieve certification is set at 75%, and the course allows for re-taking the quiz at the end of each module to improve one's fund of knowledge and score. After completing the course successfully you must request a certificate. A signed and dated copy of the CITI certificate should be submitted to the course coordinator with a copy kept for your records/future use. The certificate must be submitted by XXXX

4. Group presentation: critique of a research article. Groups of 2 to 3 students will orally present to the class a critique of research articles selected from the course pack. The critique will cover all major aspects of the research process as described in the guidelines for research critique. Consideration of utilization of the study findings must be included in the presentation. Estimated presentation time for each group is 20 minutes, followed by a 10 minute class discussion. A sign-up sheet for sets of articles will be available at the fourth week of class. Grading will be based on the quality of critique, thoroughness of analysis, and dialogue with peers. Guidelines for the critique are provided in the course syllabus.

5. Paper/Proposal. You will be asked to submit a term paper describing a research proposal. The background section of the proposal, including introduction, literature review and/or theoretical framework shall be submitted by XXX for feedback from the faculty. The deadline for receipt of the completed proposal is XXX. The term paper must be submitted by 5:00 pm that day in order to avoid a penalty of 5 points grade reduction for each late day. Delays in typing or computer problems are NOT acceptable excuses. Please try to plan ahead. Guidelines for the paper are provided in the course syllabus.

6. Tests: Two tests will evaluate the students' knowledge of material covered class.

Important Note
Creativity and independent action are the keys to success in this class. You may select any research topic relevant to nursing that you wish. There are many ways to develop it into a research design. The course content and experiences will guide you. We want you to do well. Budget your time, organize your work early and you should be able to complete the term paper without major difficulties. Do not hesitate to ask for help if you need it.
Also please note that all papers will be submitted through Moodle Turnitin for detection of plagiarism, I HAVE ZERO TOLERANCE TO PLAGIARISM! Any act of plagiarism intended or not intended will result in an academic warning.

Required Textbooks:

Polit, D.F. & Beck, C. T. (2012). *Nursing Research: Generating and Assembling Evidence for Nursing Practice.* (9th ed.) Philadelphia: Wolters Kluwer Heath and Lippincott Williams & Wilkins.

Additional Readings:

Wood, M.J and Ross-Kerr, J.C, (2011). *Basic Steps in Planning Nursing Research: From Question to Proposal* (7th Ed).Sudbury, Jones and Bartlett.

Darwish, H and Noureddine, S. Course Reader. (These readings are posted on Moodle).

Class Schedule

Date	Topic	Reading
Session 1	Introduction to the course. History of Nursing Research	Polit & Beck: Chapters 1.
Session 2	Review of the Research Process: Key concepts and Steps in Research.	Polit & Beck: Chapter 3
Session 3	Research problems, questions and hypotheses	Polit & Beck: Chapter 4
Session 3	Research problems, questions and hypotheses Research literature review and critiquing evidence	Polit & Beck: Chapter 4 Polit & Beck: Chapter 5
Session 4	Research literature review and critiquing evidence	Polit & Beck: Chapter 5
Session 5	Ethical aspects of nursing research Theoretical frameworks in research *Literature search due*	Polit & Beck: Chapter 7 Polit & Beck: Chapter 8 Polit & Beck: Chapter 6 Assigned Reading on Moodle
Session 6	Quantitative designs	Polit & Beck: Chapter 9
Session 7	Enhancing rigor in quantitative research	Polit & Beck: Chapters 10-11
Session 8	Writing research proposals and planning *CITI student certificate due*	Polit & Beck: Chapter 29 Assigned Reading
Session 9	Data collection methods	Polit & Beck: Chapters 13,14
Session 10	Measurement and data quality	Polit & Beck: Chapters 14, 15 Assigned Reading on Moodle
Session 11	*Exam I*	
Session 12	Sampling designs	Polit & Beck: Chapter 12
Session 13	Developing and testing self-report scales *Background of proposal due*	Polit & Beck: Chapter 15, Assigned Reading on Moodle
Session 14	Translating research evidence into practice/ Mixed methods/Intervention research	Polit & Beck: Chapters 2, 25, 26 Assigned Reading on Moodle
Session 15	Qualitative data collection, analysis and trustworthiness	Polit & Beck: Chapter 22-23-24 Assigned Reading on Moodle
Session 16	Qualitative data collection, analysis and trustworthiness	Polit & Beck: Chapter 22-23-24 Assigned Reading on Moodle
Session 17	Critique of article and data analysis and interpretation	Polit & Beck: Chapter 5 & 19
Session 18	Student presentations	Articles presented
Session 19	Student presentations	Articles presented
Session 20	Student presentations	Articles presented
Session 21	*Exam II*	

Unit Specific Learning Outcomes

Unit I: History of Nursing Research

1. Describe ways in which research plays an important role in the nursing profession and discuss why learning about nursing research is important to practicing nurses.
2. Discuss general trends in the evolution of nursing research.
3. Identify several areas of high priority for nurse researchers.
4. Distinguish basic and applied research.

Unit II: Review of the research process:

Distinguish independent and dependent variables.

1. Differentiate between dictionary and operational definitions of a variable.
2. Describe the flow and sequence of activities in quantitative and qualitative research.

Unit III: Research question and hypotheses

1. Describe the process of developing and refining a research problem.
2. Identify aspects of the feasibility of studying a research problem.
3. Describe the function of research hypotheses and characteristics of a workable hypothesis.
4. Distinguish different types of hypotheses (e.g., simple versus complex, directional versus non-directional, research versus statistical).

Unit IV: Literature review

1. Describe several purposes of a literature review.
2. Explain the difference between a primary and a secondary source.
3. Identify several bibliographic aids for nursing research problems.
4. Perform a review of the literature on a given topic using an electronic database.

Unit V: Creation of a Theoretical Framework

1. Distinguish between theories, conceptual models, and frameworks.
2. Identify several conceptual models of nursing and several other conceptual models frequently used by nurse researchers.
3. Explain how theories are tested, fitted to a research problem, and developed.

Unit VI: Ethical Aspects of Nursing Research

1. Discuss the historical background that led to the creation of various codes of ethics.
2. Understand the nature of the conflict between ethics and scientific rigor and provide some specific examples of ethical dilemmas.
3. Identify some of the most salient costs and benefits of participating in a study from a participant's point of view.
4. Identify steps that can be undertaken to safeguard the confidentiality of study participants.
5. Describe informed consent and process consent.
6. Describe the role of Institutional Review Board (IRBs) in the review of research plans.
7. Explain the importance of ethics in research practice.
8. Discuss ethical issues ranging from plagiarism and intellectual property to human research

Unit VII: Selecting A Research Design

1. Discuss the various aspects of research design.
2. Distinguish between and evaluate cross-sectional and longitudinal designs.
3. Distinguish between and evaluate prospective and retrospective designs.
4. Describe the characteristics of a good research design.

Unit VIII: Quantitative Designs

1. Describe the characteristics of the experiments, quasi-experiments, and pre-experiments.
2. Describe the process by which subjects are randomly assigned to groups.
3. Identify several specific experimental, quasi-experimental, and non-experimental designs.
4. Describe the purpose of survey research and the types of data collection approaches it uses.
5. Describe the purposes and approaches of secondary analyses, and discuss their advantages and limitations.
6. Describe the general aims of meta-analysis.
7. Describe various aspects of research control.
8. Evaluate the strengths and weaknesses of the alternative methods of controlling extraneous variables.
9. Distinguish between internal and external validity.
10. Identify types of analyses that can be undertaken to detect threats to internal validity.

Unit IX: Qualitative Research Designs

1. Identify areas in which a qualitative researcher can plan for broad design contingencies.
2. Identify the major research traditions for qualitative research, and describe the domain of inquiry of each.
3. Describe the basic characteristics of ethnographic, phenomenological, and grounded theory studies.

Unit X: Sampling Designs

1. Distinguish between nonprobability and probability samples.
2. Identify considerations to be kept in mind in deciding sample size in a quantitative study.
3. Describe the steps in selecting a sample in a quantitative study.
4. Identify several approaches to theoretical/purposive sampling in qualitative studies.
5. Describe the purpose of power analysis.

Unit XI: Data Collection Methods

1. Identify the four main dimensions of data collection approaches.
2. Identify the three main types of data collection methods for nursing research (self-reports, observation, and biophysiologic measures), and recognize their major strengths and weaknesses.
3. Identify the major considerations in selecting a specific instrument (conceptual relevance, quality, resource limitations, etc.)
4. Describe the purpose of pretesting an instrument package.

Unit XII: Assessing Data Quality (Validity and Reliability)

1. Describe the major characteristics and the major advantages of measurement.
2. Identify several major sources of measurement error.
3. Describe three different aspects of reliability, and specify how each aspect can be assessed.

4. Interpret the meaning of correlation coefficients and reliability coefficients.
5. Identify several other criteria for assessing measuring tools.
6. Identify and describe approaches to improving the dependability of qualitative data.

Unit XIII: Design and Implementation of a Quantitative Data Analysis Strategy

1. Describe the major phases in the analysis of quantitative data.
2. Discuss the steps required to prepare data for computer analysis.
3. Describe strategies for interpreting hypothesized, unhypothesized, or mixed results.
4. Distinguish practical and statistical significance.

Unit XIV: Interventions & Mixed Methods Research

1. Discuss the challenges and limitations of conducting true experiments on humans.
2. Describe the process of intervention research: Project planning, gathering information, developing an intervention theory, designing and testing the intervention, collection and analysis of data, and dissemination.
3. Describe mixed methods research
4. Identify methodologies for mixed methods studies in terms of sampling, strategies/designs, measurement methods and statistical methods.

Unit XV: Critiquing Research Reports

1. Describe the functions of a research critique.
2. Discuss methodologic decisions amenable to criticism that designing a study involves.
3. Identify the main dimensions of a research critique (substantive, theoretical, methodologic, interpretive, ethical and stylistic).
4. Evaluate a research report along the above main dimensions.

Unit XVI: Evidence Based Nursing

1. Describe a continuum along which research utilization can occur.
2. Discuss the current status of research utilization within nursing.
3. Identify barriers to utilizing nursing research.
4. Propose three or four strategies to improve the utilization of nursing research findings for researchers, educators, practicing nurses, nursing students, and administrators.

Student conduct

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.

Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
e. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

Guidelines for the Research Proposal

The outline for the proposal is as follows:

I. Introduction. What is your major focal area? What is the problem under study? What is the population affected? What is the significance of studying this problem? End this section with a statement of the purpose of your study.
II. Review of the Literature. This section should summarize literature relating to the topic and findings of previous studies similar to your proposed study. You may describe methods that others used in studies similar to yours. End the section by a summarizing paragraph pointing out the gaps in the literature and bringing forth the need for your study. Put here your specific research questions or hypotheses.
III. Theoretical framework. The theoretical framework summarizes existing knowledge of concepts under study and provides a basis for predicting relationships among variables. You may use an already existing theory/model, or create your own model of the variables you are studying. Include in this section the conceptual definitions of all the variables that you are planning to study.
IV. Research Design. This section describes the plan for the study and type of design, with rationale for your choice of the design. Identify in this section the variables as they relate to the design i.e. which ones are the independent, dependent, and extraneous or intervening variables.
V. Sample Selection Techniques. This section describes the technique to be used in selecting the sample with explanation of the sampling design, inclusion/exclusion criteria and recruitment method.
VI. Research instruments. Describe the instruments you will use for measuring all the study variables (Operational definitions). State the type of data (categorical vs. continuous). Describe data quality: Reliability and validity for each instrument for self-report measures; Sensitivity/specificity for physiological measures.
VII. Procedure: Describe how you will conduct the study, including the number of times data will be collected, setting and method of data collection (who, what and where). Include here ethical considerations: Seeking IRB approval, informed consent.

VIII. Proposed Analysis of Results: State what statistical tests you will use for summarizing the sample characteristics and answering the research questions or testing hypotheses. Include sample tables for how you might present data obtained in the study.

IX. Conclusions and limitations. What are the specific conclusions one could make for support or lack of support of your hypotheses? What limitations in the study methods may influence the results? Are there implications for nursing practice, education or administration?

X. References

XI. Appendix. Include Research Instruments, consent forms, etc...

Guidelines for the Research Critique

I. Content of the Critique of a Research Article

E. Cite the research article (in American Psychological Association/APA format) that you will critique for this presentation. Note that the research article must be data based and published in a peer reviewed journal. A copy of the complete article must be turned in with your power point presentation outline.

F. State the primary purpose, research questions or hypotheses for the selected research article (if there is nothing mentioned in the article, write down your best guess).

G. Significance: Identify, define, and explain the significance of the clinical problem in the article. Did the researchers justify the importance of the study? How? Were they convincing?

H. Study Background and design.

4. Was the literature review comprehensive? Recent? Written in an organized manner?
5. What theoretical framework do you think was used for this study? Was it appropriate?
6. What is the research design used in the study? What are the advantages to this type of design? Would another design be more appropriate and why?

E. Sample.

1. What type of sampling design was used (probability/non probability)?
2. List and describe 3 sample selection inclusion criteria: (if not explicitly stated, what is your best guess?). List and describe 3 sample selection exclusion criteria.
3. How many subjects were actually studied? analyzed?
4. Did the authors justify their sample size and how?
    a. Availability (convenience sample)
    b. Other studies have used similar samples sizes.
    c. Power analysis.

F. Primary Variables

1. Define/describe the independent variable(s).
2. Define/describe the dependent variable(s).
3. Define/describe extraneous variable(s).
4. Phenomenon under investigation if it was a qualitative study.

G. Instruments

2. Name and describe one instrument for measuring the dependent variable and one for the independent variable, or describe the primary means of collecting data in case a qualitative design was used.

2. How was validity of the instruments reported? If this was not described, what would you do to check that the instrument was valid?

3. How did the researchers test the instrument reliability or did they only report tests done by previous authors? If reliability testing was not described, how do you think should the reliability of the instrument be addressed?

H. Describe the study procedures for data collection; would you be able to replicate the study based on the information given? Do you agree with the method used for data collection? Why or why not? Were ethical considerations attended to or addressed in the article?

I. Statistical Analysis

8. What was the level of measurement of the dependent variable?
9. What was the level of measurement of the independent variable(s)?
10. List the statistical test(s) used to test the study hypothesis(es)/answer the research questions
11. What type is/are the statistical test(s) named in question # 3 (Parametric; Non parametric)

J. Main results.

Give a brief summary of the main results of the study

K. Conclusion and Clinical Implications

1. What conclusions did the authors come to regarding the problem of interest? What clinical recommendations did they make about the problem?

2. Do you agree with the author's conclusions? Why or why not? Support your reasons for agreement/disagreement by indicating how the study met/failed to meet the criteria for the internal/external validity.

L. Presentation style of the article

1. Was there enough data present overall in the article for you to do a thorough critique?
2. Was the material organized in a logical manner?
3. Was the title appropriate for introducing the study?

M. Research utilization

Evaluate the utilization potential of the current study findings; can they be used in practice?

<u>II. Creativity of presentation, group cohesiveness and appropriate use of audio visual aids</u>.

These will be considered in evaluating the group presentation of the critique.

HD/SF, September 2014

AMERICAN UNIVERSITY OF BEIRUT

HARIRI SCHOOL OF NURSING

NURS 527 Developing Health Service Programs

(CURRENT COURSE)

Course Coordinator: Nuhad Yazbik Dumit
Email: ny00@aub.edu.lb; Ext.: 5955

The purpose of this 3-credit course is to introduce students to the development and implementation of programs/projects intended to improve practice and health system outcomes. The course will focus on the theory and practice of organizational communication in its various forms - internal, external, informal and formal - and introduce conceptual approaches and techniques of program evaluation. Opportunities for gaining access to health service organizations for project work will be provided. Students will prepare a project plan as part of the course.

Learning Outcomes

At the completion of the course, students will be able to:

1. Use appropriate measures to assess healthcare needs of a target population or health service problem based on knowledge of current health practices in the country and internationally
2. Select appropriate intervention strategy for healthcare needs of a target population or health service problem based on the assessment
3. Set realistic short-term and long-term goals addressing the healthcare needs of a target population or health service problem
4. Design a program and/or intervention intended to improve practice and/or healthcare system outcomes
5. Demonstrate knowledge of calculating cost and value of the program/intervention
6. Examine data required for performance measurement, monitoring and program evaluation for the selected program/intervention
7. Develop a business plan for the proposed program/service
8. Select appropriate organizational communication forms for the various stages of the proposed program/service

Pre-requisite: NURS 507 Role Development in Nursing Administration or equivalent

Teaching Methods: Lecture/discussion/team exercises/presentations/group papers

Course Outline

Part I: Assessing Current Practices

1. Contemporary Issues in Social/Health Service Program Planning and Administration

Part II: Problem Analysis/Needs Assessment

2. The Contribution of Theory to Program Planning
3. Understanding Social Problems
4. Needs Assessment: Theoretical Considerations
5. Needs Assessment: Approaches to Measurement

Part III: Planning, Designing, and Tracking the Intervention

6. Selecting the Appropriate Intervention Strategy
7. Setting Goals and Objectives
8. Designing Effective Programs
9. Using Management Information

Part IV: Calculating the Costs and Value of the Interventions

10. Budgeting for Control, Management, and Planning
11. Line-Item, Functional, and Program Budgeting Systems
12. Performance Measurement, Monitoring, and program Evaluation: Data Requirements
13. Program Impact Evaluation and Hypothesis Testing

Part V: Developing the Business Plan

Part VI: Using Effective Organizational Communication in Developing Health Services Programs

Course Assignments and Learning Assessment

Participation in class Discussions and Learning Activities (20%)

Participation in group discussions will be evaluated as follows:

- 16-20 points: Participate consistently in class discussions based on readings and thoughtful reflections on read material and class discussions.
- 11-15 points: Participates most of the time in class discussions based on readings and thoughtful reflections on read material and class discussions.
- 6-10 points: Participates in class discussions but comment reflects limited knowledge and understanding of reading materials.
- 0-5 points: Infrequent contributions to class discussions or makes comments that are tangential to discussion.

Midterm Paper: Focused Assessment of a Population or Health Care Delivery Problem (25%)

Students are required to conduct either a focused assessment of a population or health care delivery problem as the foundation for the development of a program (final paper) to address the identified

concern. The type of assessment chosen should reflect healthcare problems/needs of the Lebanese population. For example, problems related to health promotion such as physical fitness program; disease prevention such as control of hypertension program; and health restoration such as cardiac rehabilitation and management of chronic illnesses could be selected. Other problems such as low birth weight, adolescent smoking, or obesity could also be considered to propose a health service program addressing them. Developing such programs related to quality assurance, staff training, and community outreach could also be considered.

Students have the choice to work independently or to pair with **one** peer in the completion of the mid-term and final papers. However, this should be decided by the second session of the course.

Critical elements to be included in the midterm paper (maximum 12 pages, 12 pt. font, excluding references and appendices) are:

- Description of target population or health care delivery system selected for assessment. (2 points)
- Overview of population health need or health care delivery problem to be addressed with discussion of contributing factors derived from literature review and analysis of secondary data where applicable.
  (10 points)
- Identification of factors/behaviors related to population health need or health care delivery problem that will be the focus for a program of intervention and rationale for their selection. (8 points)
- Formulation of program hypothesis. (3 points)
- Clarity of presentation, logical organization of ideas, grammar, spelling, and use of scholarly format consistent with *APA Publication Manual, 5th edition.* (2 points)

Final Paper: Program Proposal and Evaluation Plan (55%)

Building on your assessment of a population or health care delivery problem, develop a program proposal to address the selected problem and an evaluation plan for measuring the impact of the program. Critical elements to be evaluated in the program proposal and evaluation plan (maximum 15 pages 12 pt. font, excluding references and appendices) are:

- Introductory paragraph summarizing health need or problem to be addressed, target population, and program hypothesis. (2 points)
  - Clearly defined goals and measurable objectives. (5 points)
  - Description of intervention strategies to attain program objectives, including underlying theory of change, evidence of their known effectiveness and cultural acceptability to target population/health care delivery system. (10 points)
  - Evaluation plan for measuring program implementation and attainment of objectives, including identification of process and outcome indicators for each objective, evaluation design, procedure for collection of data, plan for analysis of data, and timeline for implementation of program and completion of evaluation. (10 points)
  - Construct a budget for your proposed program, including narrative justification; attach to paper as Appendix A. (8 points)
  - Develop a business plan for the proposed program/service. (10 points.)
  - Select appropriate organizational communication forms for the various stages of the proposed program/service. (5 points.)
  - Clarity of presentation, logical organization of ideas, grammar, spelling, and use of scholarly format consistent with *APA Publication Manual, 6th edition.* (5 points)

Summary of Course Competency Evaluation	Grade Allocation	Due Date
Participation in class discussions	20 %	Every class session
Focused Assessment of a Population or Health Care Delivery Problem	25 %	--------
Program proposal & Evaluation	55 %	--------
Total	100 %	

Required Text:

Kettner, P.M., Moroney, R.M., & Martin, L.L. (2013). Designing and Managing Programs: An Effectiveness-Based Approach (4th ed.). Thousand Oaks, CA: Sage Publications.

Attendance, Grading, and Conduct:

Students will adhere to the AUB class attendance policy as stated in the AUB Catalog and to the code of conduct as stipulated on AUB website: http://pnp.aub.edu.lb/general/conductcode/index.html. Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University.

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.

Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
   Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

The grading system as outlined in the AUB Catalog for graduate students will be adhered to.

Class schedule

Date	Session	Assigned readings
October 25	Introduction to the course • Contemporary Issues in Social/Health Service Program Planning and Administration • Foundations for initiating a health service program: o Change management	Kettner et al.,: Chapter 1 Readings will be provided by instructor

AMERICAN UNIVERSITY OF BEIRUT

HARIRI SCHOOL OF NURSING

NURS 527 Systems Approach to the Development and Evaluation of Health Care Services

(REVISED COURSE)

Course Coordinator: Nuhad Yazbik Dumit
Email: ny00@aub.edu.lb; Ext.: 5955

The purpose of this 3-credit course is to introduce graduate students to the development and implementation of health service programs/projects intended to improve health care, practice, and health system's outcomes. The course addresses assessment of contemporary issues affecting health such as those of the epidemiology of diseases, healthcare policies, socio-cultural, geo-political, and economic. It focuses on the theory and practice of planning from a system's perspective and introduces conceptual approaches and techniques of program evaluation. Health service program quality control and measurement, management information, change management and organizational communication in its various forms will be addressed. Examples based on actual health service programs will be used in class discussions to illustrate the concepts. Students will prepare a project plan as part of the course.

Learning Outcomes

At the completion of the course, students will be able to:

1. Use appropriate measures to assess healthcare needs of a target population or health service problem based on knowledge of current health practices in the country and internationally.
2. Select appropriate intervention strategy for healthcare needs of a target population or health service problem based on the assessment taking into consideration the epidemiology of the country, healthcare policies, and healthcare systems.
3. Set realistic short-term and long-term goals addressing the healthcare needs of a target population or health service problem taking into consideration the socio-cultural, geo-political, and economic attributes of the population.
4. Design a program and/or intervention intended to improve practice and/or healthcare system outcomes based on system's thinking.
5. Demonstrate knowledge of calculating cost and value of the program/intervention.
6. Examine data required for performance measurement, monitoring, program evaluation, and data-driven decision making using management information systems for assuring quality for the selected program/intervention.
7. Develop a business plan for the proposed program/service.
8. Select appropriate organizational communication forms and change management approach for the various stages of the proposed program/service.

Pre-requisite: None

Teaching Methods: Lecture/discussion/team exercises/presentations/group papers

Course Outline

Part I: Assessing Current Practices

1. Contemporary Issues in Social/Health Service Program Planning and Administration
    a. Epidemiology of diseases
    b. Healthcare policies
    c. Socio-cultural, geo-political, economic, and healthcare systems

2. Foundations for initiating a health service program:
    a. Using System's Thinking for Designing and Evaluating Social Health Service Programs
    b. Leading Teams Effectively
    c. Change management

Part II: Problem Analysis/Needs Assessment

3. The Contribution of Theory to Program Planning
4. Understanding Social Problems
5. Needs Assessment: Theoretical Considerations
6. Needs Assessment: Approaches to Measurement

Part III: Planning, Designing, and Tracking the Intervention

7. Selecting the Appropriate Intervention Strategy
8. Setting Goals and Objectives
9. Designing Effective Programs
10. Using Management Information

Part IV: Calculating the Costs and Value of the Interventions

10. Performance Measurement, Monitoring, and program Evaluation: Data Requirements
11. Impact Program Evaluation and Hypothesis Testing
12. Budgeting for Control, Management, and Planning
13. Developing Line-Item, Functional, and Program Budgeting Systems

Part V: Developing the Business Plan

Part VI: Using Effective Organizational Communication in Developing Health Services Programs

Part VII: Health Service Program Quality Control and Measurement

Course Assignments and Learning Assessment

Participation in class Discussions and Learning Activities (20%)

Participation in group discussions will be evaluated as follows:

Evaluation	Grade point	Performance description
Excellent	16-20	Participates consistently in class discussions based on readings and thoughtful reflections on read material and class discussions.
Good	11-15	Participates most of the time in class discussions based on readings and thoughtful reflections on read material and class discussions.
Fair	6-10	Participates in class discussions but comment reflects limited knowledge and understanding of reading materials.
Fail	0-5	Infrequent contributions to class discussions or makes comments that are tangential to discussion.

Midterm Paper: Focused Assessment of a Population or Health Care Delivery Problem (30%)
Students are required to design a focused assessment of a population or health care delivery problem as the foundation for the development of a health service program (final paper). The type of assessment chosen should reflect healthcare problems/needs of the Lebanese population. For example, problems related to health promotion such as physical fitness program; disease prevention such as control of hypertension program; and health restoration such as cardiac rehabilitation and management of chronic illnesses could be selected. Other problems such as low birth weight, adolescent smoking, or obesity could also be considered to propose a health service program addressing them. Developing such programs related to quality assurance, staff training, and community outreach could also be considered. Students have the choice to work independently or to pair with **one** peer in the completion of the mid-term and final papers. However, this should be decided by the second session of the course.
Critical elements to be included in the midterm paper (maximum 12 pages, 12 pt. font, excluding references and appendices) are:

Critical element/content	Grade point	Description of performance	N of pages
Description of target population	2/2	Specific and accurate description	1-2 paragraphs
	1/2	General description	
	0	Unrelated description	
Overview of population health needs	5/5	Comprehensive and specific description of health needs including contributing factors derived from literature review and analysis from secondary data	2-3 pages
	4/5	Specific description of health needs including contributing factors derived from literature review and analysis from secondary data	
	3/5	General description of health needs including contributing factors derived from literature review and analysis from secondary data	

	2/5	General description of health needs	
Needs Assessment approach/s	9-10/10	All 4 types of needs assessment are addressed accurately	3-4 pages
	6-8/10	3 types of needs assessment are addressed accurately or all types addressed imprecisely	
	4-5/10	2 types of needs assessment are addressed accurately	
	0-3	Needs assessment is addressed imprecisely	
Problem Analysis	8/8	Accurate identification of factors/behaviors related to population health need or health care delivery problem that will be the <u>focus</u> for a program of intervention and rationale for their selection	3-4 pages
	6-7/8	General identification of factors/behaviors related to population health need or health care delivery problem that will be the <u>focus</u> for a program of intervention and rationale for their selection	
	4-5/8	Imprecise identification of factors/behaviors related to population health need or health care delivery problem that will be the <u>focus</u> for a program of intervention <u>without</u> rationale for their selection	
	0-3/8	Factors/behaviors unrelated to population health need or health care delivery problem	
Formulation of program hypothesis	3/3	Accurate formulation of hypothesis including hypothesis of etiology, consequence, condition, intervention, consequence, and outcome	½ page
	2/3	Formulation of hypothesis including hypothesis of precondition, condition, intervention, and outcome	
	0-1/3	Imprecise formulation of hypothesis.	

Clarity of presentation, logical organization of ideas, grammar, spelling, and use of scholarly format consistent with *APA Publication Manual, 6th edition* (2 points)

Final Paper: Program Proposal and Evaluation Plan (50%)

Building on your assessment of a population or health care delivery problem, develop a program proposal to address the selected problem and an evaluation plan for measuring the impact of the program. Critical elements to be evaluated in the program proposal and evaluation plan (maximum 15 pages 12 pt. font, excluding references and appendices) are:

Critical element/content	Grade point	Description of performance	N of pages
Introductory paragraph	2/2	Specific and accurate summary of the health need or problem, target population, and program hypothesis	1/2 page
	1/2	General description	
	0	Unrelated description	

Clearly defined goals and <u>measurable objectives</u>	5/5	Specific goal statement; Objectives written using action verbs that yield measurement of the achievement of the objectives and satisfy the following:	Specific Measurable Attainable Realistic Timely	1 page
	4/5	Specific goal statement; Objectives satisfy SMART mostly		
	3/5	General goal statement; Objectives satisfy SMART partially		
	2/5	General goal statement; Objectives satisfy SMART in a few instances		
Description of intervention strategies	9-10/10	Specific and thorough description of intervention strategies including underlying theory of change, evidence of effectiveness and cultural acceptability to target population/health care delivery system		5 pages
	6-8/10	General description of intervention strategies appropriate to the HC/service problem		
	4-5/10	Partial description of intervention strategies appropriate to the HC/service problem		
	0-3	Unrelated or partially related description of intervention strategies appropriate to the healthcare/service problem		
Evaluation plan	9-10/10	Specific and thorough description of the evaluation plan measuring program implementation and attainment of objectives, including identification of process and outcome indicators for each objective, evaluation design, procedure for collection of data, plan for analysis of data, and timeline for program implementation and completion of evaluation.		5 pages
	6-8/10	General description of the evaluation plan including most elements described above.		
	4-5/10	Partial description of the evaluation plan including some elements described above.		
	0-3	Unrelated or partially related description of the evaluation plan including few of the elements described above.		
Budget Plan including narrative justification [attach as Appendix]	5/5	Accurate formulation of a budget plan consistent with all the functions and services addressed in the intervention strategies and implementation plan		1-2 pages
	4/5	General formulation of a budget plan consistent with the most of the functions and services addressed in the intervention strategies and implementation plan		
	3/5	Partial formulation of the budget plan consistent with some of the functions and services addressed in the intervention strategies and implementation plan		
	1-2/5	Inconsistent budget plan in relation to the planned functions and services		
Business Plan [attach as Appendix]	9-10/10	Specific formulation of a business plan for the proposed program/service including the following	* Table of Contents * Executive summary * General description of services * Objectives of services	4-5 pages

		components:	* The Organizational Plan The Marketing Plan * Operational plan * Financial Documents * Supporting Documents	
	6-8/10	Formulation of a business plan including most of the components described above.		
	4-5/10	General formulation of a business plan including some components described above.		
	0-3	Formulation of a business plan including few to none of the components described above.		
Organizational communication	5/5	Selection of appropriate organizational communication forms pertinent to the various stages of the proposed program/service.		2 pages
	4/5	Selection of appropriate organizational communication forms pertinent to most of the various stages of the proposed program/service.		
	3/5	Selection of appropriate organizational communication forms pertinent to some of the various stages of the proposed program/service.		
	1-2/5	Selection of organizational communication forms pertinent to few of the various stages of the proposed program/service.		
Paper organization	3/3	Clarity of presentation, logical organization of ideas, grammar, spelling, and use of scholarly format consistent with *APA Publication Manual, 6th edition*		
	2/3	Mostly consistent with APA		
	1/3	Partially consistent with APA		
	0	Inconsistent with APA		

Summary of Course Competency Evaluation	**Grade Allocation**	**Due Date**
Participation in class discussions	20 %	Every class session
Focused Assessment of a Population or Health Care Delivery Problem	30 %	--------
Program proposal & Evaluation	50 %	--------
Total	100 %

SCHOOL OF NURSING

NURS 507 Role Development in Nursing Administration

Spring Semester 2014

Dr Michael Clinton, Professor in Nursing Science
Extension: 5956; Room 523 Rafic Hariri School of Nursing
mc42@aub.edu.lb

Thursday 10:00am – 12:50pm; Classroom 1, HSON

This **three-credit** course is offered at the beginning of the **administration track** to introduce management concepts and management techniques (often called management tools). It focuses on three core topics: roles and responsibilities of managers; leading organizational effectiveness; and strategic planning. A general management perspective is adopted throughout the course. The course examines conceptual models for management and leadership and applies them to challenges in nursing administration. Participants are encouraged to critically apply the course content to real world challenges with the aim of making the course directly relevant to the workplace. The focus is on using management models and concepts to work towards improved organizational effectiveness. Case studies of organizational problems provide the basis for group practical work. Group projects are intended to improve the functioning of organizational units and clinical departments by strengthening the nursing role in management and administration. There is a course syllabus, but this will be modified in response to themes that arise from the group work component of the course. The first module, **Management Roles and Responsibilities,** introduces ways of thinking about leadership and management and examines organizational structures, organization of patient care, communication and advocacy. The second module, **Leading for Organizational Effectiveness,** develops critical thinking about motivating co-workers, delegating responsibilities, controlling quality, building teams, developing staff, and introduces the concept of organizational change. The final module, **Strategic Planning,** develops strategic thinking and provides practice in writing mission and goal statements, making strategic decisions, option appraisal and evaluating organizational performance against key performance indicators. The course provides the foundation courses in the administration track, especially **NURS 520 Quality Management in Teams and NURS 525 Transformational Leadership for Nursing Practice.**

The course requires critical analysis of current practice in light of recent developments and research. The course involves participants in group projects selected to address current issues in the workplace.

PREREQUISITES: None

TEXTBOOK:

Marquis, B.L. & Huston, C.J. (2012) *Leadership roles and management functions in nursing*.7th ed. Philadelphia: Wolters Kluver/Lippincott, Williams & Wilkins.

LEARNING OUTCOMES:

Upon completion of the course, the student will be able to:

1. Describe management roles and responsibilities in nursing services
2. Apply techniques for improving organizational effectiveness
3. Construct future scenarios for a nursing unit or service
4. Conduct a situation analysis
5. Write strategic goals
6. Apply principles of change management
7. Model supportive communication behaviors

TEACHING METHODS:

- Reading assigned textbook chapters
- Analysis of selected published research
- Discussion of case studies
- Application of management techniques to real world problems
- Student presentations
- Independent reading
- Group work

LEARNING ASSESSMENT:

- Online participation: 15 %
- Application of management technique 40%
- Executive report on group project 45%

POLICIES:

1. All course requirements must be completed by student before grades are submitted for credit.
2. Students who miss over one fifth of lecture hours will be asked to drop the course.
3. A student who misses an exam may request a make-up examination. The final decision for such requests will be taken by the course coordinator.
4. The passing grade for this course is "70".
5. Students are expected to abide by AUB's policy on student code of conduct (p. 3).

COURSE OUTLINE

30th January**: Introduction to the Course**

Course outline
Assignments
Self-Awareness
Developing Management Skills Presentation
Group work: Completion of Management Skills Scale
Time Management
Reading: Marquis & Huston – Chapter 9.

Module 1. Management Roles and Responsibilities

6h February: 1.1. Twenty-First Century Thinking about Leadership and Management
Reading: Marquis & Huston – Chapter 3.
1.2. Organizational, Political and Personal Power
Reading: Marquis & Huston – Chapter 13.
Group Work: Exercise 3.7 or 13.9

13th February: 1.3 Organizing Patient Care
Reading: Marquis & Huston – Chapter 14.
1.4 Staffing Needs and Scheduling Policies
Reading: Marquis & Huston – Chapter 17.
Group Work: Exercise 14.6 or 14.7

20th February 1.5 Organizational, Personal and Group Communication
Reading: Marquis & Huston – Chapter 19.
1.6 Patient Subordinate and Professional Advocacy
Reading: Marquis & Huston – Chapter 6.
Group Work: Exercise 6.9

Module 2 Leading Organizational Effectiveness

27th February: 2.1 Creating a Motivating Climate
Reading: Marquis & Huston – Chapter 18.
Group Work: Exercise 18.5
2.2 Delegation
Reading: Marquis & Huston – Chapter 20
Group Work: Exercise 20.7.

6th March: 2.3 Quality Control
Reading: Marquis & Huston – Chapter 23.
2.4 Recruitment, Selection and Retention
Reading: Marquis & Huston – Chapter 15
Group Work: Exercise – 15.6

13th March: 2.5 Team Building
Reading: Marquis & Huston – Chapter 16.
2.6 Career Development
Reading: Marquis & Huston – Chapter 11.
Group Work: Exercise 19.7

20th March: 2.7 Planned Change
Reading: Marquis & Huston – Chapter 8; Exercise 8:10

Module 3. Strategic Planning

27th March: 3.1 Strategic and Operational Planning
Reading: Marquis & Huston – Chapter 7.
Group Work: Case Study

3rd April: 3.2 Setting Direction and Strategy
Case Study: SWAT, TAWS, Porter's five forces, PEST
KPIs, Patient Satisfaction, QALYS
Reading: Marquis & Huston – Chapter 8

10th April: 3.3 Fiscal Planning
Reading: Marquis & Huston – Chapter 10
Group Work: Exercise 10.11

17th April: Participant Initiated Topic

Group Assignments

24th April: Presentation of Group Projects

1st May: Final Date for Submission of Group Projects

ASSESSMENT REQUIREMENTS

CLASS PARTICIPATION (15% of Course Grade)

Posting of three online assignments that will be announced during the course. The focus will be based on the learning model described in Session 1 and the exercises in the set textbook. The assignments will be posted one week before the end of each course module. (15%)

APPLICATION OF A MANAGEMENT TECHNIQUE (1000 words maximum) (40% of Course Grade)

THIS ASSIGNMENT TO BE SUBMITTED ELECTRONICALLY IN APA FORMAT BY MONDAY 21ST APRIL, 2014.

GUIDELINES FOR INDIVIDUAL ASSIGNMENT

PURPOSE OF THE ASSIGNMENT:

To provide an opportunity for you to demonstrate competence in applying a management tool to a topic of your choice. The topic may be one you are working on for your group assignment, or one that you want to work on because it is relevant to something you want to change in the workplace.

GENERAL REQUIREMENTS:

The course provides beginning practice in the application of management techniques relevant to real world challenges in nursing administration. Select a management tool mentioned in the course and describe how you would use it to address a management challenge in a nursing service. You will find the "Mind Tools" website: http://www.mindtools.com/pages/main/ThemedIndex.htm invaluable for reviewing management tools, their background and applications. Try to review the Mind Tools material on the techniques of the week before attending class.

SPECIFIC REQUIREMENTS:

Introduction (5%)

- Brief description of the management issue to be addressed

Description (5%)

- Description of the relevant management technique with reference to the originator (properly referenced in APA format; and if possible a recent research that reports on use of the technique.

Diagram (15%)

- A diagrammatic representation of the management tool. **This must be an original diagram, not one taken from Mind Tools or another source.** Please use Visio or PowerPoint to prepare your diagram

Application (15%)

- Brief description of the application of the selected management tool. If you choose to use the Visio program to prepare your diagram, you can access it from the AUB server:

    1. Click on the A-Z tab on the AUB homepage;
    2. Click on AUB Applications Server; https://softtools.aub.edu.lb/Citrix/MetaFrame/default/default.aspx
    3. Login using your AUB identifier and Password;

4. Click on Microsoft Office 2007;

5. Choose: Visio

GROUP WRITTEN ASSIGNMENT (45% of Course Grade)

THIS ASSIGNMENT TO BE SUBMITTED ELECTRONICALLY AS A WORD DOCUMENT IN APA FORMAT ON THURSDAY, 1ST MAY, 2014

GUIDELINES FOR GROUP ASSIGNMENT

PURPOSE OF THE ASSIGNMENT:

To provide an opportunity for you to bring together concepts learned during the course to address a topic selected from those listed below.

GENERAL REQUIREMENTS:

Work in groups of **4-5 students** to prepare an **executive summary** of the application of concepts covered in the course to **one** of the topics listed below, or an alternative topic of equal complexity approved by the course instructor. **Maximum length**: **two A4 pages**. The final paper is due **one week after the end of the course.**

SPECIFIC REQUIREMENTS:

Introduction (5%)
Provide an overview of what will be covered and indicate the main conclusion and any recommendations from the exercise. Justify your choice of topic and approach with reference to nursing priorities in Lebanon.

Provide a brief analysis of the topic (10%): (**500 words; please see instructions below**).

Action (10%): Describe management actions that address the topic using concepts in the course.

Deliberation (10%): Justify your actions with reference to published research.

Applicability (10%): Assess the applicability of your chosen actions to nursing administration in Lebanon. Identify any important obstacles to progress, and indicate how they might be overcome.

Grammar and syntax, and APA format (5%) American Psychological Association (2001) *Publication manual of the American Psychological Association*. Washington: APA.

Be sure to indicate what each group member has contributed to completion of the exercise and preparation of the group report. Specifically, explain any agreement about authorship of the sections and any other contributions individual group members made to the exercise.

GUIDELINES FOR ANALYSING THE TOPIC (500 words)

Briefly describe the topic. Identify its significance for nursing administration in Lebanon. Identify the reasons for management intervention with reference to the likely consequences of inaction. Describe the most important management issues to be addressed. Specify the intended outcomes and how you will judge the success or otherwise of your interventions. Limit your management actions to those that have the greatest potential for improving nurses' job satisfaction by tackling the deepest causes of dissatisfaction. Specify any assumptions you have to make to complete this exercise. Complete the exercise with reference to **either** a hospital unit, **or** a small hospital.

TOPICS FOR GROUP ASSIGNMENT

1. Healthcare organizations strive to implement shared governance to support retention of nurses and to improve patient care. Assess progress in implementing shared governance in a healthcare setting of your choice. What has gone well? What has not gone well? How much skepticism is there about the concept of shared governance? What needs to be done now to bring shared governance closer to reality?

2. Choose a familiar health care setting and describe the methods used to prevent pressure sores. What is the prevalence of pressure sores in the organization? Is the prevalence increasing or decreasing? Why? What needs to change to improve performance on this nurse sensitive indicator? What principles of change management are relevant? (You may substitute a nurse sensitive indicator of your choice for this assignment.

3. Assess the business plan for a nursing service of your choice. Identify any operational goals that involve the scope of nursing practice. Undertake a risk assessment of these changes Identify the performance indicators you would use to assess whether the stated goals been met.

4. Are nurses knowledge workers? If they are, what are the implications for **ONE** of the following:
    - Organizational structures?
    - Empowerment and delegation?
    - Reporting relationships and accountability?
    - Leadership practices?
    - Intended patient outcomes?
    - Key performance indicators?

ALTERNATE TOPICS

5. Choose an article from the course reading list and explain the relevance of the author(s) arguments and conclusions to the development of nursing administration in Lebanon.

STUDENT CONDUCT

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.
In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.
Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
   Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE

SCHOOL OF NURSING

NURS 507 Essentials of Nursing Administration & Management

(REVISED COURSE)

Dr. Lina Younan, Clinical Assistant Professor in Nursing Science

Extension: 5981; Room 522 Rafic Hariri School of Nursing

ly11@aub.edu.lb

Tuesday 9:00am – 10:50pm

This **two-credit** course is offered at the beginning of the **administration track** to introduce management concepts and management techniques (often called management tools). It focuses on three core topics: roles and responsibilities of managers; leading organizational effectiveness; and strategic planning. A general management perspective is adopted throughout the course. The course examines conceptual models for management and leadership and applies them to challenges in nursing administration. Participants are encouraged to critically apply the course content to real world challenges with the aim of making the course directly relevant to the workplace. The focus is on using management models and concepts to work towards improved organizational effectiveness. Case studies of organizational problems provide the basis for group practical work. Group projects are intended to improve the functioning of organizational units and clinical departments by strengthening the nursing role in management and administration.

PREREQUISITES: None

REQUIRED TEXTBOOK:

Russell, L.A. (2013). Management and Leadership for Nurse Administrators (6th ed.). Burlington: Jones & Bartlett Learning.

American Psychological Association. (latest edition date). Publication manual (APA Manual) (6th ed.).Washington, DC: American Psychological Association

Recommended Textbook:

Marquis, B.L. and Huston, C.J. (2014). Leadership roles and management functions in nursing (8th ed.). Philadelphia: Lippincott Williams & Wilkins.

LEARNING OUTCOMES:

Upon completion of the course, the student will be able to:

1. Describe management roles and responsibilities in nursing services based on standards of nursing administration practice by ANA 2009
2. Examine techniques for improving organizational effectiveness
3. Analyze nursing units and services addressing organizational structure, recruitment and staffing issues
4. Conduct a situation analysis addressing common administrative nursing problem
5. Write strategic goals
6. Present ideas of how to proactively involve staff in managing change
7. Model supportive communication behaviors

TEACHING METHODS:

- Reading assigned textbook chapters
- Analysis of selected published research
- Discussion of case studies
- Application of management techniques to real world problems
- Student presentations
- Independent reading
- Group work

LEARNING ASSESSMENT:

- Online participation: 15 %
- Application of management technique 40%
- Executive report on group project 45%

POLICIES:

1. All course requirements must be completed by student before grades are submitted for credit.
2. Students who miss over one fifth of lecture hours will be asked to drop the course.
3. A student who misses an exam may request a make-up examination. The final decision for such requests will be taken by the course coordinator.
4. The passing grade for this course is "70".
5. Students are expected to abide by AUB's policy on student code of conduct (p. 3).

COURSE OUTLINE

Date	**Topics**	**Reading**	**Group Work**
Session 1	Introduction to the Course		
Session 2	Time management and delegation	Marquis & Huston – Chapter 9&20	Exercise 20.7
Module 1. Management Roles and Responsibilities			
Session 3	Concepts & Theories guiding	Russel : Chapter 2	Exercise 2-9

	professional practice Standards of nursing administration practice	Marquis &Huston: Chapter 3	
Session 4	Organizational Structure & Analysis*	Russel – Chapter 7 Marquis & Huston – Chapter 14.	Exercise 7.1 and 7.4
Session 5	Collaborative Decision Making and Communication*	Russel – Chapter 6	Case Study: Exercise 6.3
Module 2 Leading Organizational Effectiveness			
Session 6	Creating a Motivating Climate	Marquis & Huston – Chapter 18	Exercise 20.7
Session 7	Recruitment, Selection and Retention*	Russel – Chapter 8 Marquis & Huston – Chapter 15	Exercise 8.2
Session 8	Performance Appraisal	Russel – Chapter 18	Exercise 18.1
Session 9	Managing a Culturally Diverse Workforce*	Russel – Chapter 23	Exercise 23.1
Session 10	Change, Complexity, and Creativity	Russel – Chapter 5, Marquis & Huston – Chapter 8	Exercise 8.10
Module 3. Strategic Planning			
Session 11	Strategic and Operational Planning*	Russel – Chapter 9	Exercise 9.10
Session 12	Tools for Evaluating Operations and Care Delivery Systems	Russel – Chapter 16	Exercise 16.1
Session 13	Quality Management	Russel – Chapter 17 Marquis & Huston – Chapter 23	
Session 14	Risk Management	Russel – Chapter 15	Exercise 15.2
Session 15	Presentation of Group Projects		
	Final Date for Submitting Group Projects		

ASSESSMENT REQUIREMENTS

CLASS PARTICIPATION (15% of Course Grade)

Posting of three online assignments that will be announced during the course. The focus will be based on the learning model described in Session 1 and the exercises in the set textbook. The assignments will be posted one week before the end of each course module. (15%)

APPLICATION OF A MANAGEMENT TECHNIQUE (1000 words maximum) (40% of Course Grade)

THIS ASSIGNMENT TO BE SUBMITTED ELECTRONICALLY IN APA FORMAT

GUIDELINES FOR INDIVIDUAL ASSIGNMENT

PURPOSE OF THE ASSIGNMENT:

To provide an opportunity for you to demonstrate competence in applying a management tool to a topic of your choice. The topic may be one you are working on for your group assignment, or one that you want to work on because it is relevant to something you want to change in the workplace.

GENERAL REQUIREMENTS:

The course provides beginning practice in the application of management techniques relevant to real world challenges in nursing administration. Select a management tool mentioned in the course and describe how you would use it to address a management challenge in a nursing service. You will find the "Mind Tools" website: http://www.mindtools.com/pages/main/ThemedIndex.htm invaluable for reviewing management tools, their background and applications. Try to review the Mind Tools material on the techniques of the week before attending class.

SPECIFIC REQUIREMENTS:

Introduction (5%)

Brief description of the management issue to be addressed

Description (5%)

Description of the relevant management technique with reference to the originator (properly referenced in APA format; and if possible a recent research that reports on use of the technique.

Diagram (15%)

A diagrammatic representation of the management tool. **This must be an original diagram, not one taken from Mind Tools or another source.** Please use Visio or PowerPoint to prepare your diagram

Application (15%)

Brief description of the application of the selected management tool. If you choose to use the Visio program to prepare your diagram, you can access it from the AUB server:

1. Click on the A-Z tab on the AUB homepage;
2. Click on AUB Applications Server; https://softools.aub.edu.lb/Citrix/MetaFrame/default/default.aspx
3. Login using your AUB identifier and Password;
4. Click on Microsoft Office 2007;
5. Choose: Visio

GROUP WRITTEN ASSIGNMENT (45% of Course Grade)

THIS ASSIGNMENT TO BE SUBMITTED ELECTRONICALLY AS A WORD DOCUMENT IN APA FORMAT

GUIDELINES FOR GROUP ASSIGNMENT

PURPOSE OF THE ASSIGNMENT:

To provide an opportunity for you to bring together concepts learned during the course to address a topic selected from those listed below.

GENERAL REQUIREMENTS:

Work in groups of **4-5 students** to prepare an **executive summary** of the application of concepts covered in the course to **one** of the topics listed below, or an alternative topic of equal complexity approved by the course instructor. **Maximum length**: **two A4 pages**. The final paper is due **one week after the end of the course.**

SPECIFIC REQUIREMENTS:

Introduction (5%)
Provide an overview of what will be covered and indicate the main conclusion and any recommendations from the exercise. Justify your choice of topic and approach with reference to nursing priorities in Lebanon.

Provide a brief analysis of the topic (10%): (**500 words; please see instructions below**).

Action (10%): Describe management actions that address the topic using concepts in the course.

Deliberation (10%): Justify your actions with reference to published research.

Applicability (10%): Assess the applicability of your chosen actions to nursing administration in Lebanon. Identify any important obstacles to progress, and indicate how they might be overcome.

Grammar and syntax, and APA format (5%) American Psychological Association (2001) *Publication manual of the American Psychological Association*. Washington: APA.

> **Be sure to indicate what each group member has contributed to completion of the exercise and preparation of the group report. Specifically, explain any agreement about authorship of the sections and any other contributions individual group members made to the exercise.**

GUIDELINES FOR ANALYSING THE TOPIC (500 words)

Briefly describe the topic. Identify its significance for nursing administration in Lebanon. Identify the reasons for management intervention with reference to the likely consequences of inaction. Describe the most important management issues to be addressed. Specify the intended outcomes and how you will judge the success or otherwise of your interventions. Limit your management actions to those that have the greatest potential for improving nurses' job satisfaction by tackling the deepest causes of dissatisfaction. Specify any assumptions you have to make to complete this exercise. Complete the exercise with reference to **either** a hospital unit, **or** a small hospital.

TOPICS FOR GROUP ASSIGNMENT

1. Healthcare organizations strive to implement shared governance to support retention of nurses and to improve patient care. Assess progress in implementing shared governance in a healthcare setting of your choice. What has gone well? What has not gone well? How much skepticism is there about the concept of shared governance? What needs to be done now to bring shared governance closer to reality?
2. Choose a familiar health care setting and describe the methods used to prevent pressure sores. What is the prevalence of pressure sores in the organization? Is the prevalence increasing or decreasing? Why? What needs to change to improve performance on this nurse sensitive indicator? What principles of change management are relevant? (You may substitute a nurse sensitive indicator of your choice for this assignment.
3. Assess the business plan for a nursing service of your choice. Identify any operational goals that involve the scope of nursing practice. Undertake a risk assessment of these changes Identify the performance indicators you would use to assess whether the stated goals been met.
4. Are nurses knowledge workers? If they are, what are the implications for **ONE** of the following:
    a. Organizational structures?
    b. Empowerment and delegation?
    c. Reporting relationships and accountability?
    d. Leadership practices?
    e. Intended patient outcomes?
    - Key performance indicators?

ALTERNATE TOPICS

Choose an article from the course reading list and explain the relevance of the author(s) arguments and conclusions to the development of nursing administration in Lebanon.

STUDENT CONDUCT

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.
In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.
Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

b. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).

c. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).

d. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

Appendix N

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE

HARIRI SCHOOL OF NURSING

N505: Advanced Practice in Adult Care I: Course syllabus

(CURRENT COURSE)

Spring 2013-2014

Course number and title: N505: Advanced Practice in Adult Care I.

Number of credits: 4 credits. Lecture and discussion: 2 hours; clinical practice: 6 hours.

Prerequisites: N503 Advanced Health Assessment**;** N504: Advanced Pathophysiology

Catalogue Course description: This course builds on N504 & N503 and includes a theory and a clinical component. Emphasis is on further refinement and extension of pathophysiological concepts and skills in the assessment and management of clients with a spectrum of health problems.

Detailed course description: The theory component of this course covers the human response to complex multi-system health problems. The emphasis is on management of illnesses, based on pathophysiological and psychosocial theory, and including pharmacological, invasive and alternative interventions. The nursing process is used as the organizing framework for the course. Topics include diabetes, hypertension, cardiometabolic syndrome, chronic obstructive pulmonary disease, respiratory failure, acute coronary syndrome, heart failure, renal failure, dementia, shock, sepsis, pain, malnutrition and cancer. In the clinical component of the course, students begin to explore and practice aspects of the clinical nurse specialist role in their area of interest, focusing on developing clinical expertise. Emphasis is placed on the clinical application and utilization of nursing research and theory relevant to nursing intervention in the care of the acutely ill patient. Within the clinical setting, attention is given to the bio-psycho-social and cultural variables influencing the patient position on the health-illness continuum. Clinical rounds are incorporated where students analyze and synthesize knowledge of pathophysiology, assessment and psychosocial concepts in case study presentations.

Course coordinator: Samar Noureddine, PhD, RN, FAHA; email: sn00@aub.edu.lb. Office extension: 5966; cell phone: 03-579451.

Learning Outcomes:

Upon successful completion of the course, the student will be able to:

1. Analyze current biobehavioral research related to the management of patients with acute and chronic conditions.

2. Compare and contrast descriptive indices and assessment parameters of complex bio-behavioral health problems.

3. Develop nursing and collaborative diagnoses based on appropriate selection of health assessment data.

4. Select evidence-based nursing interventions relevant to selected diagnoses and adapted to individual patient needs.

5. Evaluate the effectiveness of the plan of care.

6. Participate in the coordination and management of care of adults in the acute care setting with the multidisciplinary health care team.

Textbooks:

1. Required:

Foster, J. W., & Prevost, S. S. (2012). *Advanced Practice Nursing of Adults in Acute Care.* (2nd ed). Philadelphia: F. A. Davis.

Cooper, D. H., Krainik, A. J., Lubner, S. J., Reno, H. E. (2010). *Washington Manual of Medical Therapeutic.*, (33rd ed). Philadelphia: Lippincott Williams & Wilkins. **This book is available online on Moodle. The 2014 34th edition is available in Books and pens for 75,000 L.L.**

Noureddine, S. *Course Reader (extra readings are posted on Moodle).*

2. **Recommended (all are available at the Saab Medical Library):**

Carpenito, L. J. (2006). Nursing Diagnosis: Application to clinical practice (11th ed.) Philadelphia: Lippincott.

Moorhead, S., Johnson, M., & Maas, M. (Eds). (2004). *Iowa outcomes project: Nursing outcomes classification (NOC)*. (3rd ed.) St. Louis, MO: Mosby.

Johnson, M., Bulecheck, G., McCloskey Dochtermann, J., Maas, M., & Moorhead, S. (2005). *Nursing diagnoses, outcomes & interventions: NANDA, NOC and NIC linkages*. (2nd ed). St. Louis: MO: Mosby.

McClockey Cochterman, J. C., & Bulechek, G. (2004). *Iowa outcomes project: Nursing interventions classification (NIC).* (4th ed). St. Louis, MO: Mosby.

Teaching methods:
Classroom discussions of assigned readings.
Student presentations.
Precepted clinical practice.

Schedule of Classes

Date	Topic	Reading
Tuesday Jan. 28, 2014	Introduction to the course. Overview of the roles & competencies of the clinical nurse specialist.	Foster & Prevost: Chapter 1 Course reader: AACN standards of advanced practice; NACNS competencies
Tuesday Feb 4, 2014	Management of clients with hypertension & Cardiometabolic syndrome.	Foster & Prevost: Chapters 9 & 13 Cooper et al: Chapter 4 Course reader: 2014 Hypertension guidelines
Tuesday Feb 11, 2014	Management of clients with Respiratory failure (COPD and ARDS).	Foster & Prevost : Chapters 10 & 15 Cooper et al.: Chapter 8, 9 Course reader: GOLD guidelines for COPD; ARDS management guidelines
Tuesday Feb 18, 2014	Prevention and management of clients with acute coronary syndrome	Foster & Prevost: Chapter 9 Cooper et al: Chapter 5 Course reader: Management guidelines for ACS
Tuesday Feb 25, 2014 **Paper topic, outline & references due**	Management of older adults: Dementia **Dr. Hala Darwish**	Foster & Prevost: Chapter 4 Course reader: Management guidelines for dementia
Tuesday March 4, 2014	Management of patients with brain traumatic injury **Dr. Hala Darwish** ***First patient write up due***	Foster & Prevost: Chapter 8 Cooper et al: Chapter 24 Course reader: Guidelines for the management of neurologic injury
Tuesday March11, 2014	Management of clients with renal failure.	Foster & Prevost: Chapter 13 Cooper et al: Chapter 11 Course reader: Management of acute kidney injury
Tuesday March 18, 2014	Management of patients with hematologic malignancies Pain management	Foster & Prevost: Chapters 14 & 3 Cooper et al.: Chapter 20 Course reader: Cancer care
Tuesday April 1, 2014 **Paper half way over**	Management of patients with shock and sepsis	Foster & Prevost: Chapters 9 & 15 Cooper et al: Chapter 8 Course reader: Sepsis guidelines
Tuesday April 8, 2014	Management of clients with heart failure.	Foster & Prevost: Chapter 9 Cooper et al: Chapter 6 Course reader: Guidelines for HF management
Thursday April 10 or 18, 2014	Management of clients with diabetes and its complications **Dr. Mona Nasrallah**	Foster & Prevost: Chapter 11 Cooper et al: Chapter 21 Course reader: ADA diabetes guidelines
Tuesday April 22, 2014	Management of patients with malnutrition	Foster & Prevost: Chapter 2 Cooper et al: Chapter 2

	Second patient write up due	Course reader: Malnutrition in critical illness
Tuesday April 29, 2014	Management of clients with cerebrovascular accidents	Foster & Prevost: Chapter 1 Cooper et al: Chapter 24 Course reader: ASA stroke guidelines
Tuesday May 6, 2014	***Paper due***	

Learning Assessment:

Class participation & student presentations:	20%
Paper	30%
Clinical evaluation, including weekly logs and mini project	35%
Patient write ups	15%

Student participation:

Classes will be interactive in this course. Case studies will be used as the basis for discussing clinical topics throughout the semester. Evidence based guidelines for management of specific patient populations will be compared and discussed. Research articles related to the clinical topics covered will be assigned for discussion in class. Each student is expected to give a presentation in one of the above areas. In the last class, students will share their main achievements in the clinical rotation.

Paper guidelines:

Each student will select a clinical topic, using a case study or clinical problem, based on his/her clinical area of interest to develop the paper requirement for this course. This theoretical paper should review and synthesize the state of bio-behavioral knowledge on the problem chosen, with consideration of demographic, genetic and environmental influencing factors. Background data and research evidence will be used to support discussion of the nursing management of the chosen problem within an advanced practice perspective. The paper should not exceed 10-15 pages of double spaced text. You must use APA style. Grading criteria include:

1. Problem definition and incidence/prevalence overview	10%
2. Bio-behavioral knowledge review (pathophysiology, manifestations)	25%
3. Synthesis of related factors (risk factors, co-morbidities)	10%
4. Evidence based advanced practice nursing management	40%
5. APA style, organization, grammar	15%

Students are urged to prepare this paper for publication and will be mentored into choosing an appropriate journal and submit it as manuscript.

Clinical Component:

Students are expected to choose a clinical area in which they wish to develop expertise. Students are required to write behavioral objectives that reflect course objectives and their individual needs and interests. Each week, the student shall indicate objectives to be completed, strategies to achieve them, self-evaluate the outcome, and discuss that in written clinical logs with the faculty.

Students will be assigned one or more preceptors who will guide their practice and participate in their evaluation. The focus in this practicum is on the development of the advanced clinical practice role of the clinical nurse specialist role. Emphasis is placed on the utilization of the nursing process in the management of patients. Six hours of clinical practice are required per week. Students are expected to participate in multidisciplinary clinical rounds where cases are discussed as applicable to their area of interest.

The evaluation of the clinical will be based on student progress towards their set behavioral objectives, feedback from the assigned preceptor and student, as well as one mini project/product to be prepared by the end of the semester. This project may be a clinical pathway, clinical assessment tool, or a patients/staff teaching session.

Weekly reports of the clinical experience must include:

1. Brief overview of the objectives achieved and activities in which the student was engaged
2. Self-evaluation of/reflection on the experience during that week
3. Description of cases seen using the SOAP format with elaboration on patient management.

Patient write ups:

Students are required to submit 2 patient write ups from the cases encountered in the clinical setting, based on the nursing process. The write ups shall include the following:

- Assessment data base (subjective and objective). Include relevant medical and surgical history.
- Nursing diagnosis(es)
- Outcome criteria
- An intervention plan within the scope of advanced practice with specific evidence based advanced practice interventions

Students may use an expanded version of the SOAP format if they wish. However the planning/intervention part ought to be elaborated with actions specific to the case. Do not include general actions plans; only specific interventions. Address the patient holistically, including a biopsychosocial approach and evidence based interventions. Include references at the end of the write up. Note the rubric on Moodle that will be used to grade the write up.

Student conduct

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism. Students' papers shall be submitted on Moodle and will be subjected to a plagiarism check by Turnitin software.

Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
b. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

Appendix O

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE

HARIRI SCHOOL OF NURSING

N505A Course syllabus

(NEW COURSE)

Course number and title: N505A: Advanced Practice in Adult-Gerontology Care I.

Number of credits: 4 credits. Lecture and discussion: 2 hours; clinical practice: 6 hours.

Prerequisite: N503 Advanced Health Assessment**;**
Co-requisite: N504: Advanced Pathophysiology

Catalogue Course description: This course builds on N504 & N503 and includes a theory and a clinical component. Emphasis is on further refinement and extension of pathophysiological concepts and assessment skills in the management of clients with a spectrum of health problems.

Detailed course description: The theory component of this course focuses on health promotion, disease prevention and the diagnosis and management of chronic health problems in adults and older adults. The emphasis is on management of health problems, based on pathophysiological and psychosocial theory, and including pharmacological, invasive and alternative interventions. The nursing process is used as the organizing framework for the course. Topics include risk assessment and risk reduction strategies for cancer screening, lipid monitoring, smoking, physical activity, diet and weight management, diabetes, hypertension, cardiometabolic syndrome, coronary artery disease, chronic obstructive pulmonary disease, heart failure, chronic renal failure, infectious diseases, cerebrovascular disease, in addition to health problems of older adults (cognitive impairment, urinary incontinence, dehydration).
In the clinical component of the course, students begin to explore and practice aspects of the clinical nurse specialist role in their area of interest, focusing on developing clinical expertise. Emphasis is placed on the clinical application and utilization of research evidence and theory relevant to nursing intervention in the care of adults and older adults. Within the clinical setting, attention is given to the bio-psycho-social, genetic and cultural variables influencing the patient position on the health-illness continuum. Clinical rounds are incorporated where students analyze and synthesize knowledge of pathophysiology, assessment and psychosocial concepts and practice clinical decision making. Patient/family education and counseling are emphasized.

Faculty: Samar Noureddine, PhD, RN, FAHA; email: sn00@aub.edu.lb. Office extension: 5966.
Hala Darwish, PhD, RN; email: hd30@aub.edu.lb; office extension: 5938

Learning Outcomes:

Upon successful completion of the course, the student will be able to:

1. Discuss epidemiologic trends on the health-illness continuum in adults and older adults.
2. Analyze current biobehavioral research related to the prevention and management of adults and older adults with chronic conditions.
3. Compare and contrast descriptive indices and assessment parameters of health risks common chronic health problems in adults and older adults.
4. Develop nursing and collaborative diagnoses based on appropriate selection of health assessment data.
5. Select evidence-based nursing interventions relevant to selected diagnoses and adapted to patient and family needs.
6. Evaluate the effectiveness of the plan of care through identified patient outcomes.
7. Participate in the coordination and management of care of adults and older adults in various health settings with the multidisciplinary health care team.
8. Demonstrate competence in educating and counseling adults and older adults regarding healthy lifestyles and self care.
9. Discuss ethical issues surrounding the care of adults and older adults with chronic illness, and end of life care.

Textbooks:

1. Required:

Teaching methods:

Classroom discussions of assigned readings.
Student presentations.
Precepted clinical practice.

Content outline

Date	Topic
Week 1	**Introduction to the course. Overview of the roles & competencies of the CNS**
week 2	**Health promotion, health risk appraisal and healthy lifestyle**
week 3	**Management of clients with hypertension & Cardiometabolic syndrome.**
week 4	**Management of clients with Chronic Obstructive Pulmonary Disease and Asthma. Dyspnea management**
week5	**Health problems associated with aging. Palliative and end of life care. Pain management**
week 6	**Management of clients with irritable bowel syndrome and peptic ulcer disease.**
week 7	**Management of clients with chronic neurologic disorders: multiple sclerosis, Parkinson's disease**
week 8	**Anxiety, sleep problems, fatigue and depression in chronic illness**
week 9	**Management of clients with chronic renal failure and urinary incontinence.**
week 10	**Management of clients with heart failure; self care in chronic illness**
week 11	**Management of clients with diabetes and its complications**
week 12	**Management of clients with dehydration and malnutrition**
week 13	**Management of clients with cerebrovascular accidents**
week 14	**Management of clients with cognitive impairment in older adults: Dementia and delirium.**

Learning Assessment:

Class participation & student presentations:	20%
Exam	30%
Clinical evaluation, including weekly logs and mini project	35%
Patient write ups	15%

Student participation:

Classes will be interactive in this course. Case studies will be used as the basis for discussing clinical topics throughout the semester. Evidence based guidelines for health risk assessment and management of specific patient populations will be compared and discussed. Research articles related to the clinical topics covered will be assigned for discussion in class. Each student is expected to give a presentation in one of the above areas.

Exam:

Students will sit for an exam that covers material addressed in the course using open ended questions and based on case studies.

Clinical Component:

Students are expected to choose a clinical area in which they wish to develop expertise. Students write behavioral objectives that reflect course objectives and their individual needs and interests. Each week, the student shall indicate objectives to be completed, strategies to achieve them, self-evaluate the outcome, and discuss that in written clinical logs with the faculty.

Students will be assigned one or more preceptors who will guide their practice and participate in their evaluation. The focus in this practicum is on the development of the advanced clinical practice role of the clinical nurse specialist role, using the nursing process in the management of patients. Six hours of clinical practice are required per week. Students are expected to participate in multidisciplinary clinical rounds where cases are discussed as applicable to their area of interest. Clinical placement shall be in outpatient and inpatient settings.

The evaluation of the clinical will be based on student progress towards their set behavioral objectives, feedback from the assigned preceptor and student, as well as one mini project/product to be prepared by the end of the semester. This project may be a clinical pathway, clinical assessment tool, or a patients/staff teaching session.

Weekly reports of the clinical experience must include:

4. Brief overview of the objectives achieved and activities in which the student was engaged
5. Self-evaluation of/reflection on the experience during that week
6. Description of cases seen using the SOAP format with elaboration on patient management.

Patient write ups:

Students are required to submit 2 patient write ups from the cases encountered in the clinical setting, based on the nursing process. The write ups shall include the following:

- Assessment data base (subjective and objective), including relevant medical and surgical history.
- Nursing/collaborative diagnosis(es)
- Outcome criteria
- An intervention plan within the scope of advanced practice with specific evidence based advanced practice interventions
- The care plan must be organized around the identified diagnoses and related olutcomes.

Students may use an expanded version of the SOAP format if they wish. However the planning/intervention part ought to be elaborated with actions specific to the case. Do not include general actions plans; only specific interventions. Address the patient holistically, including a biopsychosocial approach and evidence based interventions. Include references at the end of the write up. Note the rubric on Moodle that will be used to grade the write up.

Student conduct

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism. Students' papers shall be submitted on Moodle and will be subjected to a plagiarism check by Turnitin software.

Appendix P

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE

HARIRI SCHOOL OF NURSING

N505B Course syllabus
(NEW COURSE)

Course number and title: N505B: Advanced Practice in Adult-Gerontology Care II.

Number of credits: 4 credits. Lecture and discussion: 2 hours; clinical practice: 6 hours.

Prerequisites: N504: Advanced Pathophysiology

Catalogue Course description: This course addresses advanced nursing practice in adult care and includes a theory and a clinical component. Emphasis is on further refinement and extension of pathophysiological concepts and assessment skills in the management of adults and older adults with acute and critical care conditions.

Detailed course description: The theory component of this course focuses on the early detection and management of acute and critical care health problems in adults and older adults. The emphasis is on holistic management of health problems, based on pathophysiological and psychosocial theory, and including pharmacological, invasive and alternative interventions. The nursing process is used as the organizing framework for the course. Topics include acute coronary syndrome, respiratory failure, acute renal failure, liver failure, shock, sepsis, skin and wound management, hematologic disorders, solid tumors, skin and wound management, thyroid and parathyroid problems and musculoskeletal problems. In the clinical component of the course, students continue developing clinical expertise in managing adults and older adults with acute and critical illness. Emphasis is placed on clinical decision making using relevant research evidence and theory, taking into consideration the patient and family preferences for care. Within the clinical setting, attention is given to the bio-psycho-social, genetic and cultural variables influencing the patient and his/her family. Clinical rounds are incorporated where students analyze and synthesize knowledge of pathophysiology, assessment and psychosocial concepts and practice clinical decision making. Patient/family education and counseling are emphasized.

Faculty: Samar Noureddine, PhD, RN, FAHA; email: sn00@aub.edu.lb. Office extension: 5966.
Hala Darwish, PhD, RN; email: hd30@aub.edu.lb; office extension: 5938

Learning Outcomes:

Upon successful completion of the course, the student will be able to:

1. Discuss ethical issues surrounding the care of adults and older adults with critical illness, and the role of technologic advances in this regard.

3. Analyze current biobehavioral research related to the prevention and management of acute and critical care conditions in adults and older adults.

4. Analyze and interpret assessment findings of adults and older adults with acute and critical illness.

5. Develop nursing and collaborative diagnoses based on health assessment data.

6. Select evidence-based interventions relevant to selected diagnoses and adapted to patient and family needs.

7. Evaluate the effectiveness of the plan of care through identified patient outcomes, including patient and family preferences.

8. Participate in the coordination and management of care of adults and older adults in acute care settings with the multidisciplinary health care team.

9. Demonstrate competence in education and counseling of patients/families in the setting of acute and critical illness.

Student participation:

Classes will be interactive in this course. Case studies will be used as the basis for discussing clinical topics throughout the semester. Evidence based guidelines for management of specific patient populations will be compared and discussed. Research articles related to the clinical topics covered will be assigned for discussion in class. Each student is expected to give a presentation in one of the above areas. In the last class, students will share their main achievements in the clinical rotation.

Paper guidelines:

Each student will select a clinical topic, using a case study or clinical problem, based on his/her clinical area of interest to develop the paper requirement for this course. This theoretical paper should review and synthesize the state of bio-behavioral knowledge on the problem chosen, with consideration of demographic, genetic and environmental influencing factors. Background data and research evidence will be used to support discussion of the nursing management of the chosen problem within an advanced practice perspective. The paper should not exceed 10-15 pages of double spaced text. You must use APA style. Grading criteria include:

1. Problem definition and incidence/prevalence overview	10%
2. Bio-behavioral knowledge review (pathophysiology, manifestations)	25%
3. Synthesis of related factors (risk factors, co-morbidities)	10%
4. Evidence based advanced practice nursing management	40%
5. APA style, organization, grammar	15%

Students are urged to prepare this paper for publication and will be mentored into choosing an appropriate journal and submit it as manuscript.

Clinical Component:

Students are expected to choose a clinical area in which they wish to develop expertise. Students are required to write behavioral objectives that reflect course objectives and their individual needs and interests. Each week, the student shall indicate objectives to be completed, strategies to achieve them, self-evaluate the outcome, and discuss that in written clinical logs with the faculty.
Students will be assigned one or more preceptors who will guide their practice and participate in their evaluation. The focus in this practicum is on the development of the advanced clinical practice role of the clinical nurse specialist role. Emphasis is placed on the utilization of the nursing process in the management of patients. Six hours of clinical practice are required per week. Students are expected to participate in multidisciplinary clinical rounds where cases are discussed as applicable to their area of interest. Clinical placement shall be in acute care settings.

The evaluation of the clinical will be based on student progress towards their set behavioral objectives, feedback from the assigned preceptor and student, as well as one mini project/product to be prepared by the end of the semester. This project may be a clinical pathway, clinical assessment tool, or a patients/staff teaching session.

Weekly reports of the clinical experience must include:

1. Brief overview of the objectives achieved and activities in which the student was engaged

2. Self-evaluation of/reflection on the experience during that week
3. Description of cases seen using the SOAP format with elaboration on patient management.

Patient write ups:

Students are required to submit 2 patient write ups from the cases encountered in the clinical setting, based on the nursing process. The write ups shall include the following:

- Assessment data base (subjective and objective). Include relevant medical and surgical history.
- Nursing/collaborative diagnosis(es)
- Outcome criteria
- An intervention plan within the scope of advanced practice with specific evidence based advanced practice interventions
- The care plan must be organized around the identified diagnoses and their related outcomes.

Students may use an expanded version of the SOAP format if they wish. However the planning/intervention part ought to be elaborated with actions specific to the case. Do not include general actions plans; only specific interventions. Address the patient holistically, including a biopsychosocial approach and evidence based interventions. Include references at the end of the write up. Note the rubric on Moodle that will be used to grade the write up.

Student conduct

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.
In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism. Students' papers shall be submitted on Moodle and will be subjected to a plagiarism check by Turnitin software.
Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
c. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

Appendix Q

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE
HARIRI SCHOOL OF NURSING

N531 Course Syllabus

Course Number and Title: N531: Practical Applications of Budgeting in Nursing

Number of Credits: 1 credit (5 weeks)

Course Description:

This course focuses on practical applications of concepts in budgeting and basic financial management. Emphasis is placed on development of nursing budgets for a patient care unit and for a department/division. Participants will learn to develop a budget and evaluate the financial status of a department or operating unit and determine what, if any, corrective actions need to be taken. The course presents various analytical methods in management decision making, including variance analysis, and break-even analysis. Also includes approaches to productivity improvement techniques.

Learning Outcomes:

At the completion of this course, the student will be able to:
1. Describe the various sources of funding of health care delivery.
2. Understand and interpret financial statements for purposes of decision-making.
3. Identify tools and techniques for preparing a budget and apply them in different settings
4. Develop budgets for revenues, and expenses (including staffing budget).
5. Evaluate the financial status of a department or operating unit using volume adjusted variance analysis to determine the cause(s) of performance deviation.

Faculty: Lina Younan, RN, DNP, email: ly11@aub.edu.lb; extension: 5981.

Textbooks:

Ward, J.W. (1994). Health Care Budgeting & Financial Management for Non-Financial Managers. Westport, CT: Greenwood, Inc.

Finkler, S. and McHugh, M. (2008). Budgeting Concepts for Nurse Managers, 4th Edition. St Louis, MO: Saunders, Elsevier, Inc.

Teaching Methods:

Lectures, class activities, and case studies will be used as teaching leaning strategies.

Content Outline

Date	Topic	Content
Module 1	Overview of Health Care System & Financing	– Components of the Health Care System – Sources of Health Care Financing – Financial hierarchy in hospitals – The Language of Finance – Balance Sheet – Income Statement – Financial Ratios
Module 2	Overview of Budget Planning	– Definition & Purposes of a Budget – Types of Budget – Budget Control – Documents to examine before starting – Key Budget Terms
Module 3	Operations & Capital Budgets	– Operations Budget • Statement of goals and objectives • Volume revenue • Personnel budget • Supplies and services budget – Capital Budget • How to package the request • The approval process
Module 4	Controlling & Variance Analysis	– Departmental Performance Reports – Variance Listing – Variance Analysis – Forecasting – Break-Even Analysis
Module 5	Productivity	– Definition – Importance of productivity – Measures of productivity – Increasing productivity

Learning Assessment:

Class Participation	10%
Assignment 1	25%
Assignment 2	20%
Assignment 3	25%
Assignment 4	20%

Class Participation:

Students are expected to participate actively in class discussions. This grade will be based on preparation, attendance, punctuality, and quality of participation.

Assignments:

The student will complete 4 Financial Exercises throughout this course. The student will answer a series of questions in a Microsoft Word document. Each Financial Exercise must include a title and reference page in APA format, and must be submitted as 1 document.
Each Financial Exercise is due by 11:59 p.m. on Sunday of the assigned module/week.

Student Conduct:

Students are expected to abide by AUB's Policy on Student Code of Conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.
In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.

Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
b. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

NURS 525 TRANSFORMATIONAL LEADERSHIP FOR NURSING PRACTICE

(CURRENT COURSE)

Dr Michael Clinton, Professor, Extension: 5956; 5th floor, Rafic Hariri School of Nursing
Email: mc42@aub.edu.lb
Fall term 2011-2012
Timetable: Thursdays 9:00 – 11:00
Venue: Classroom 3, Rafic Hariri School of Nursing

COURSE DESCRIPTION:

NURS 525 is a **2-credit course** offered to Master of Nursing Science Students**.** The aim of this course is to promote critical thinking about, appreciation of and utilization of leadership behaviors in nursing settings that have been shown to be effective in published research. The course encourages a reflective and analytical approach to cultivating effective personal leadership behaviors and how to encourage them in others – less experienced colleagues, peers, more experienced leaders and managers. It introduces the student to the full spectrum leadership model and to the transformational leadership components of that model. Participants will engage in assessment of their leadership behaviors, develop strategies to build on their strengths, and evaluate their progress during the course. The course requires a strong commitment to analyzing set readings, analyzing personal behaviors, goal setting and evaluation, and to principles of adult learning.

PREREQUISITES:

Satisfactory completion of one or more administration courses in the Master of Science Nursing Program, or substantial experience in a nursing leadership role.

TEXTBOOKS & READINGS:

There is no set text book for the course. Weekly readings will be suggested. Students are required to analyze set readings or equivalent readings of their choice before class. The focus in all reading is on identifying effective leadership, thinking critically about their potential application in nursing, and on preparing action plans to enhance personal leadership effectiveness. Students in practice will be required to report back to the group on the implementation and success of attempts at introducing new or enhanced leadership behaviors in relevant settings.

LEARNING OUTCOMES: *On completion of the course, the student will be able to*:

1. Explain transformational leadership behaviors as part of the full spectrum leadership model

2. Identify personal leadership behaviors relevant to the transformational leadership ethos
3. Apply selected evidence-based leadership behaviors.
4. Evaluate personal transformational leadership interventions
5. Encourage and appraise transformational leadership behaviors in others
6. Apply principles of transformational leadership to personal, group, and system change
7. Demonstrate transformational leadership behaviors in class
8. Plan further personal development in transformational leadership behaviors

TEACHING METHODS:

- Lecture and Discussion
- Student presentation
- Analysis of case studies
- Individual and group reflection

LEARNING ASSESSMENT:

Student presentation	25%
Completion of the TLP Part B:	50 %
Class participation:	25 %

POLICIES:

1. All course requirements must be completed by the student before grades are submitted for credit.
2. Absence of students, whether excused or not, from any class or laboratory session does not excuse them from their responsibility for the work done or for any announcements made during their absence.
3. Students who absent themselves during a semester for more than *one third* of the number of hours of any course lose all credit for the course.
4. The passing grade for this course is "70".

COURSE OUTLINE:

Session:		**Topics**
1.	29 September	Leadership for personal and professional growth
2.	6 October	Self-assessment and personal goals
3.	13 October	The Full-Spectrum Leadership Model
4.	20 October	Using the Transformational Leadership Profile
5.	27 October	Why leadership matters (#51)
6.	3 November	Leadership skills of successful nurse managers (#14)

7.	10 November	Leadership and patient outcomes (#52)
8.	17 November	Leadership and intentions to stay (#6)
9.	24 November	Staff nurses and clinical leadership (#32)
10.	1 December	Champions and leadership (#47)
11.	8 December	'Being a leader' (#39)
12.	15 December	Leadership Action Plan Workshop – Personal leadership
13.	22 December	Leadership Action Plan Workshop – Group leadership
14.	5 January	Leadership Action Plan Workshop – System leadership
15.	12 January	Leadership Action Plan Workshop – Integrated leadership

Friday 29th January, 2011. Electronic Submission of TLPs Part B.

THERE IS NO EXAMINATION FOR THIS COURSE

GUIDELINES FOR STUDENT ASSIGNMENTS:

Student Presentation 25 %

Our first session every week will be used to discuss your experience with trying out the leadership behaviors you choose to work on. All students will make an individual presentation on a topic in weeks 5-11 depending how many are taking the course. The core reading is indicated for each topic. The number next to the # refers to the place of the article in the list of course reading. When making presentation please focus on three questions:

- What does the article tell us about leadership?
- How is the main concept defined?
- What leadership behaviors should we use and why?

Completion of TLP Part B: 50 %

Please practice the transformational leadership behaviors covered in the course. Use the template provided in Part B of the Transformational Leadership Action Plan to **summarize and critique** your leadership behaviors since starting the course. 2000 – 2500 words.

Class participation: 25 %

Whenever possible, please display transformational leadership behaviors in class. Your mark for classroom participation will also include recognition of your input from the readings, and your contributions to our Leadership Action Plan workshops in the four sessions at the end of the course. **Please see the criteria for student assessment at the end of the course outline.**

STUDENT CONDUCT

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.

In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.
Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
f. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

Suggested Readings

Students are encouraged to find their own sources of literature on transformational leadership. The following are some recent articles that might be referred to in class and which provide an up-to-date overview of the topic.

CRITERIA FOR GRADING ASSIGNMENTS

Student Presentation **25 %**

You will be asked to present a summary of a selected paper on transformational leadership to the group. Your presentation will be graded on the following criteria (up to five (**5**) marks will be awarded for your performance against each criterion):

1. Accuracy of your summary of the paper
2. Use of audiovisual aides
3. Clear identification of transformational behaviors stated or implied in the paper
4. Confidence in making your presentation
5. Responses to questions from the group

Completion of TLP Part B: 50 %

The course encourages you to practice transformational leadership behaviors covered in the set readings and our group discussions. Please keep weekly notes on your progress, and use them to fill in Part B of your TLP. Please use the template provided in Part B of the Transformational Leadership Action Plan to **summarize and critique** the actions you have taken to strengthen your leadership behaviors since starting the course. 2000 – 2500 words. Your completed template will be assessed against each of the following criteria:

1.	First page	10%
2.	Reference to transformational leadership behaviours	10%
3.	Outcomes of short-term goals	10%
4.	Logical structure of medium-term goals	10%
5.	Measurable outcomes for medium term goals	10%
6.	Evidence of inspiration in long-term goals	15%
7.	Behaviors proposed to meet long-term goals	15%
8.	Presentation (grammar, spelling, layout, appearance of the document)	15%
9.	**Submitted by 5:00pm on Friday, 20th January, 2012.**	5%

Class participation: 25 %

The course encourages you to practice transformational leadership behaviors especially in class (up to five (**5**) marks will be awarded for your performance against each criterion):

1. Reading in advance for classroom sessions
2. Modeling the transformational leadership learning cycle
3. Supporting the group to find solutions to problems
4. Modeling a facilitative leadership style
5. Showing respect for colleagues (by listening actively, not interrupting when others are talking, clarifying ideas, empathizing with expressed feelings)

MC, September 2011.

AMERICAN UNIVERSITY OF BEIRUT FACULTY OF MEDICINE
HARIRI SCHOOL OF NURSING

NURS 525 LEADERSHIP THEORIES AND APPROACHES FOR NURSE MANAGERS

(REVISED COURSE)

Dr Michael Clinton, Professor, Extension: 5956; 5th floor, Rafic Hariri School of Nursing
Email: mc42@aub.edu.lb
Timetable: **Thursdays, 9:00 – 11:50am**
Venue: Rafic Hariri School of Nursing

COURSE DESCRIPTION:

NURS 525 is a **3-credit course** offered to Master of Nursing Science Students**.** The aim of this course is to promote familiarity with, critical thinking about, and applications of evidence-based theories of leadership in nursing settings. The course encourages a reflective and analytical approach to cultivating effective personal leadership behaviors. A related theme is how best to facilitate leadership development in others: less experienced colleagues, nursing peers, more experienced leaders and managers. The course introduces the full spectrum leadership model, examines its transformational leadership components in depth, and explores similarities and differences between transformational leadership and selected leadership theories. Authentic leadership, value-based leadership and leadership behaviors based on chaos theory are the comparators for transformational leadership this semester. Participants will assess leadership behaviors, develop strategies to build on leadership strengths, and evaluate progress during the course. The course requires a strong commitment to analyzing set readings, observing leadership behaviors, reflecting on personal behaviors, goal setting and evaluation.

PREREQUISITES:

Satisfactory completion of one or more administration courses in the Master of Science Nursing Program, or experience in a leadership role.

TEXTBOOKS & READINGS:

There is no set text book for the course. Participants take turns in introducing seminar topics based on prior critical reading of research articles on leadership. Readings are used to: identify effective leadership, assess the evidence for their effectiveness, think critically about their potential application in nursing settings, and to provide a basis for short, medium and long term leadership development plans. Each week a participant will report on lessons learned from practicing a leadership behavior of their choice.

LEARNING OUTCOMES: *On completion of the course, the student will be able to*:

1. Explain transformational leadership behaviors as part of the full spectrum leadership model

2. Identify personal leadership behaviors relevant to the transformational leadership ethos

3. Compare and contrast transformational leadership with authentic leadership, value-based leadership and leadership approaches based on chaos theory.

4. Apply selected evidence-based leadership behaviors.

5. Evaluate personal leadership interventions

6. Demonstrate leadership behaviors in class

7. Plan for further personal leadership development

TEACHING METHODS:

- Multimedia resources
- Online PowerPoint presentations
- Completion of online activities
- Participant group presentations
- Weekly reflection and goal planning
- Completion of a personal leadership development plan
- Participant debates on sensitive topics

LEARNING ASSESSMENT:

1. Completion of online activities 20%
2. Individual presentation 30%
3. Completion of the TLP Part B 50%

INFORMATION ABOUT LEARNING ASSESSMENT

The following information for each online activity and learning assignment are posted on the course MOODLE page and clearly labeled:

- Purpose
- Instructions
- Submission
- Due date

GUIDELINES FOR STUDENT ASSIGNMENTS:

On-line participation: 20 %

Please engage with one another online by using the Leadership Café online forum to discuss your reading, post articles for others to read, and contribute to our understanding of how to put

leadership theories into practice. Posts designed to encourage input into problem solving and change management will be highly regarded.

Individual presentation **30 %**

We will cover the core reading for the course in the weeks up to and including 30 October. Please prepare a presentation on an article selected from the reading list for this semester which we would otherwise not discuss in class. Choose an article that interests you and which you think has clear practical implications. Prepare a presentation of around 20 minutes to be followed by 30 minutes discussion. Individual presentations will be scheduled for the sessions to be held form 6th November to and including 20th November. . When you have chosen an article to present, please post a message to the Leadership Café to let everyone know. When making presentation please focus on three questions:

- What does the article tell us about leadership?
- How is the main concept defined?
- What leadership behaviors should we use and why?
- How does the article contribute to your leadership development?

Grading Criteria:

Your presentation will be graded on the following criteria (up to five (**5**) marks will be awarded for your performance against each criterion):

1. Accuracy of your summary of the paper 5%
2. Use of audiovisual aides 5%
3. Evidence for the effectiveness of the leadership behaviors stated or implied in the paper 10%
4. Conviction in explaining the application of your reading 5%
5. Responses to questions from the group 5%

Completion of PLP Part B: **50 %**

Please practice the transformational leadership behaviors covered in the course. Use the template provided in Part B of the Personal Leadership Action Plan to **summarize and critique** your leadership behaviors since starting the course. 2000 – 2500 words.

The course encourages you to practice leadership behaviors covered in the set readings and our group discussions. Please keep weekly notes on your progress, and use them to fill in Part B of your PLP. Please use the template provided in Part B of the Personal Leadership Action Plan to **summarize and critique** the actions you have taken to strengthen your leadership behaviors since starting the course. 2000 – 2500 words. Your completed template will be assessed against each of the following criteria:

1. First page 5%
2. Clarity of short-term goals 5%
3. Measureable outcomes for short-term goals 5%
4. Clarity of medium term goals 10%

5. Measurable outcomes for medium term goals 10%

6. Long term goals 5%

7. Presentation (grammar, spelling, layout, appearance of the document) 5%

8. **Submitted online by 5:00pm on Thursday, 18th December, 2014.** 5%

Please see the criteria for student assessment at the end of the course outline.

POLICIES:

All relevant AUB academic policies are applicable to the course.

COURSE OUTLINE:

The course schedule for this semester is set out on our MOODLE course page. The course will be adapted to the interests and changing needs of participants. The following is the default structure for the course.

Session 1 Orientation and Self-Assessment

1. Orientation to course objectives, course activities and course assignments
2. Self-assessment activities
3. Relationship between self-assessment activities, course objectives and personal leadership plans

Session 2. The Full-Spectrum Leadership Model

1. The Full-Spectrum Leadership Model Explained
2. Hiller et.al. article
3. Why Leadership Matters
4. Generic Leadership Observation Checklist
5. Reflection, Analysis and Planning

Session 3. Observations of Leadership Behaviors

1. Observing leadership behaviors
2. Leadership behaviors and their interpretation
3. Observation and intuition
4. Analysis of interviews with selected leaders
5. Linking leadership behaviors to leadership theories
6. Reflection, Analysis and, Planning

Session 4. Individual Consideration

1. Watson article
2. The Missing Link in Employee Motivation
3. The Leadership Ladder
4. Social Intelligence and Leadership - Interview with Daniel Goleman
5. Daniel Goleman on Social Intelligence and the Biology of Leadership
6. Self-assessment of Emotional Intelligence
7. Calculating your TEIQue-SF score

8. Reflection, Analysis and Planning

Session 5. Inspiring, Stimulating, Influencing

1. Kim et. al. article
2. Menaker and Bahn article
3. Andressen, Knradt & Neck article
4. Analysis of Steve Jobs' 2005 Stanford Commencement Address
5. Analysis of Tony Robbins motivational speech at NAC London 2011
6. Reflection, Analysis and Planning

Session 6. Idealized Influence

1. Idealized Influence Attributes
2. Idealized Influence Behaviors
3. Preparation an Inspirational Message
    - Analyze the audience
    - Refining the message
    - Communicating for impact
    - Evaluating outcomes
4. Submit a Personalized Idealized Influence Video
5. Rubric for Grading Personalized Idealized Influence Video Files
6. Reflection, Analysis and Planning

Session 7. Inspiring and Motivating

1. Antonakis article
2. Momeni article
3. Fitzgerald and Schutte article
4. Video: How Does Google Motivate its Employees?
5. How do Great Leaders Inspire Action?
6. Can creativity be mentored?
7. Reflection, Analysis and Planning

Session 8. Authentic Leadership

1. Is Authentic Leadership Something New?
2. Wong and Giallonardo article
3. Wong & Cummings (2009) article
4. Norman, Avolio, Luthans article
5. Why do Trust Some Leaders but not Others?
6. Leadership and Sincerity?
7. Reflection, Analysis and Planning

Session 9. Values and Behavior

1. Clarifying Personal Values
2. What's Important in Life Exercise?

3. Carter & Greer article
4. Communicating Personal Values
5. Sama & Shoaf article
6. Hoffman (1986)
7. Reflection, Analysis and Planning

Session 10. Chaos Theory and Leadership

1. Chaos Theory and Leadership Studies2. Burns article
3. Chadwick article
4. Vicenzi article
5. Leadership Lessons from Chaos Theory
6. Does Chaos Theory Eliminate the Need for Strategic Planning?
7. Reflection, Analysis and Planning

Session 11. Ethics and Moral Judgment

1. Ethical Leadership and Follower's Judgment
2. Renn, Taylor & Njoroge article
3. Watson article
4. Transformational Leadership and Inauthentic Leaders
5. Lopez-Zafra, Garcia-Retamero & Landa article
6. Reflection, Analysis and Planning

Session 12: Gender and Leadership

1. Leadership Styles and Gender Specific Leadership Effectiveness
2. Harris, Bennett & Ross article
3. Kyriakidou article
4. Lovell article
5. Barriers to Career Advancement
6. Quest for Inclusion and Credibility
7. Reflection, Analysis and Planning

Session 13: Culture and Leadership

1. Culture Defined
2. Dimensions of Culture
3. Cultural Insights - Geert Hofstede
4. Clusters of World Cultures
5. Characteristics of Cultures
6. Cultures and Stereotypes
7. Universally Desirable and Undesirable Leadership Behaviors
8. Dimensions of Culture Questionnaire
9. Reflection, Analysis and Planning

Session 14. Discussion of Draft Personal Leadership Plans

THERE IS NO EXAMINATION FOR THIS COURSE

STUDENT CONDUCT

Students are expected to abide by AUB's policy on student code of conduct. In particular, while taking a test or examination, students shall rely on their own mastery of the subject and not attempt to receive help in any way not explicitly approved by the instructor; for example, students shall not try to use notes, study aids, or another's work. Such cheating includes trying to give or obtain information about a test, trying to take someone else's exam, or trying to have someone else take one's own exam.
In addition, whenever students draw on another's work, they must specify what they borrowed, whether facts, opinions, or quotations, and where they borrowed it from. Using another person's documented ideas or expressions in one's writing without acknowledging the source constitutes plagiarism.
Students are also expected to be honest in all dealings with the University. Certain kinds of dishonesty, though often associated with academic work, are of a different category than cheating or plagiarism. These kinds of dishonesty include (but are not limited to) the following:

a. Misrepresenting personal circumstances to an instructor (for example, in requesting a makeup exam or special due date for an assignment, or in explaining an absence).
g. Forging parts of, or signature on, official documents (including both, university documents and relevant outside documents, such as doctors' notes).
c. Taking credit for work in a team-project when little or no contribution to the work of the team has been made.

Disciplinary actions taken for student misconduct range from warning to suspension, to expulsion from the University. For more information, visit: http://pnp.aub.edu.lb/general/conductcode/index.html

College of Nursing, University of Colorado
Denver
Course Syllabus

Instructor:	**Diane J. Skiba, PhD, FACMI, FAAN**	**Term:**	**Summer 2014**
Office:	**Ed 2 North, Room 4215**	**Class Days:**	6/2/14-7/25/14
Phone:	**(303) 724-8527**	**Class Hours:**	Online
Office Hours:	**By Appointment Only**	Class Room:	Online
Email:	Diane.Skiba@ucdenver.edu		
Staff Support:	Shirley Hanson; Ed 2 N, Rm 4233 Shirley.hanson@ucdenver.edu (303) 724-8545		

I. Welcome!

This will be an exciting course in which you get to apply your knowledge of e-health to design a campaign to encourage patients and consumers to be more actively engaged in their health. This campaign is aligned with the Office of the National Coordinator for Health Information Technology National Action Plan for Consumer Engagement via E-Health Tools. As an informatics specialist, you will gain knowledge of the various tools being used beyond the walls of a formal health care institution. You will also build your library of knowledge through the wealth of resources provided in the course as well as your interactions with your colleagues and your instructor.

II. University Course Catalog Description

The focus is on the design and application of e-health principles to the delivery of health care. Evidence-based support for e-health are examined within a context of the legal, ethical, social and public policy challenges of health care delivery system.

III. Course Overview

This course is built upon a learner-centered model that incorporates the principles of best practices in teaching and learning. This collaborative learning model encourages active learner participation, collaboration with your colleagues and makes use of several online tools provided by our online learning platform, Canvas and other support tools. This online course supports geographically dispersed learners. This course is built upon a

learner-centered model that relies heavily on the various forms of communication including email, asynchronous communication and real-time chat.

Communication is an integral part of the learning experience and it is expected that learners will communicate with each other, and the faculty. This 3-credit course assumes a minimum of 9-12 hours per week. In the summer, you must remember you are doing double time so estimate at least of minimum of 18 hours per week. This estimated time includes your weekly online participation including reading messages & communication, preparation for each module that includes readings, searching the web and completing learning activities and your participation in the completion of module assignments.

IV. Course Goals and Learning Objectives

Upon completion of the course, the learner will be able to:

- Critique the use of e-health applications for the delivery of cost effective quality care.
- Create a plan to implement an e-health application to support advanced nursing practice.
- Evaluate the impact of e-health applications on patient and cost-quality outcomes and the relationship between providers and patient.
- Assess the legal, ethical, infrastructure and policy issues related to the implementation of e-health applications.

V. Course Prerequisites

Computer Competency.

VI. Course Credits

3 credit hours

VIII. Course Schedule

Dates		*Module Content*	*Outcome Assessment*
June 2 to June 13, 2014		Module 1 Introduction	Participation in Discussions
June 14 to June 27, 2014		Module 2 Applications	Team Assessment & First Draft
June 28 to July 12, 2014		Module 3: Evidence	Journal Club & Evidence Table
July 13 to July 25, 2014		Module 4: Challenges	Team Assessment & Final Product

EVALUATION

IX. Assignments

There are four forms of competency assessment.

The first is your **participation in class discussions**. Class participation in module discussions will be used to assess your learning in this module. Since you are rating yourself on this rubric, you may want to jot some notes about your rating for this module. The instructor will also be rating you on the participation rubric. This score is worth 20% of your total grade.

The second type of competency assessment is your **team assessment rating**. The Team Assessment Rubric will be used to provide an assessment of your ability to work as a team on your Blue Button Campaign. You will complete this assessment, as will your other teammates and the instructor will also complete. An average across all three ratings will constitute your team assessment score. This score is worth 20% of your grade.

The third competency assessment is related to your participation in the **Journal Club**. This assessment will examine your contributions to the journal club in terms of your critique of the article and your interactions in the journal club. This is an individual score and worth 20% of your grade.

The fourth competency assessment is a final grade on your Blue Button Campaign Product. Throughout the semester, you will be completing segments of your campaign and getting feedback. At the end of the semester, I will grade this product according to the **Presentation Rubric.** A webinar will be held to present the specifics of the campaign format. The final product is worth 40% of your grade.

X. Basis for Final Grade

Assessment	Percent of Final Grade
Class Discussions	20%
Team Assessment Rating	20%
Journal Club	20%
Presentation Rubric	40%

Grading Scale (%)	
94-100	A
90-93	A-
87-89	B+
84-86	B
80-83	B-
77-79	C+
74-76	C
70-73	C-
67-69	D+
64-66	D
60-63	D-
0 - 59	F

XI. Grade Dissemination

In accordance with Family Education Rights and Privacy Act of 1974, we want to insure your privacy as a student. We will provide individual feedback on your participation by sending you a private email using the INBOX within Canvas. For team assignments, feedback will be provided in your private team discussion areas. For the final grade, we will send a private email to you using an external email address.

COURSE PROCEDURES

XII. Course Policies: Grades

Attendance Policy: It is expected that you will devote a minimum of 18-24 hours per week on this course given the 8-week session. You should be logging into the class on a regular basis, which is several times per week. If you are going to be out for more than a day or two without access to the Internet, you should inform your team and your instructor.

UC Denver Student Attendance and Absences Policy:
http://www.ucdenver.edu/faculty_staff/employees/policies/Policies%20Library/OAA/Stud entAttendance.pdf

Late Work Policy: I prefer work not to be late. If you are going to be late or your team will be late, please notify me. If you do not notify me in advance, there will be points extracted from the assignments.

Extra Credit Policy: There is no opportunity for extra credit.

Grades of "Incomplete": The current university policy will be followed in this course. Incomplete grades are given only in situations where unexpected emergencies prevent a student from completing the course and the remaining work can be completed the next semester. The course faculty has the final authority on whether a student can qualify for an incomplete. Incomplete work must be finished by the end of the subsequent semester or the "I" will be automatically be recoded as an "F" on the student's transcript.

Rewrite/Resubmit Policy: There is rarely an occasion for this policy but if needed, you or the team can negotiate with the faculty member.

Team Work Policy: In the Main discussion group, there is a posting that provide the specifics of the expectations for teamwork. Remember part of your grade will be assessment through the completion of the Team Assessment Tool.

XIII. Course Policies: Technology and Media

Email: The majority of the course discussion will occur in the Discussion Forums. If you would like to have a private discussion you should start by sending an INBOX message. The INBOX is located at the top right side menu above the Canvas Logo. Phone appointments are also available for discussions around any course issues. Please send an email to request a phone call appointment. Conference sessions on Canvas are also possible.

Library-supplied online databases and collections. If you assign readings that are available through the Full0Text library services or e-reserves, it is your responsibility to secure these articles. You cannot download and then post for the rest of the class or your team. It is a violation of the copyright law to distribute a copyrighted article without permission from the journal. So please do not violate the copyright agreement, you will place the online program in jeopardy if we loose our licensing agreements with publishers and databases

XIV. Course Policies: Student Expectations

Civility: As a faculty member, I agree to create a climate for learning characterized by respect for each other and to recognize the individual contributions each person makes to class. I ask that you make a similar commitment.

Auraria Library: If you engage students in research, consider including the use of the Auraria Library services, research databases and collections, and librarian expertise as one of your expectations. Include name of specific librarian contact and/or library subject expert web page http://library.auraria.edu/services/researchhelp/specialists.

Writing Center: If you engage students in writing, consider including the use of the Writing Center as one of your expectations.
http://www.ucdenver.edu/academics/colleges/CLAS/Centers/writing/Pages/TheWritingCenter.aspx

Religious Observances: If you are observing any religious holidays, please let your team and your instructor know.

UNIVERSITY POLICIES

XV. Access

Disability Access: For students requesting accommodations, you will need to contact the Office of Disability Resources & Services (DRS) located in Building 500, Rm. W1103. The physical address is 13001 E. 17th Place, and the phone number is (303) 724-5640. Their staff will assist in determining reasonable accommodations as well as coordinating the approved accommodations.

XVI. Academic Honesty

For policies related to Student Code of Conduct and Students called for Military Duty, click here to read in the Student Handbook:
http://www.ucdenver.edu/academics/colleges/nursing/Documents/PDF/CONStudentHandbook.pdf

XVII. Canvas' Commitment to Accessibility

Canvas measures and evaluates accessibility levels using a Voluntary Product Accessibility Template. 'This Voluntary Product Accessibility Template, or VPAT, is a tool that administrators and decision-makers can use to evaluate Canvas' conformance with the accessibility standards under Section 508 of the Rehabilitation Act.'
http://www.instructure.com/canvas_vpat

XVIII. Important Dates to Remember

Academic Calendar:

http://www.ucdenver.edu/student-services/resources/registrar/Documents/AcademicCalendars/amc/College%20of%20Nursing/AcademicCalendar-CON-2014-2015.pdf

Course Description

This course is intended for students with health background (e.g. such as nursing or medicine) and with an understanding of the biology of disease and dynamics of disease transmission. The course introduces the students to the principles, concepts and application of epidemiology in the field of Public Health. The course consists of lectures, assigned readings and complimentary practical sessions that provide students with basic epidemiological knowledge and tools relevant to public health practice. Students will acquire an understanding of the basic principles of epidemiology, disease and effect measures, different epidemiologic study designs, and applied epidemiologic knowledge of inferences and biases.

Topics covered

1. Introduction to Epidemiology and its Rubrics
2. Measuring disease occurrence
3. Sources of epidemiological data
4. Epidemiologic study designs: Cross-sectional studies
5. Epidemiologic study designs: Case-control studies
6. Epidemiologic study designs: Cohort studies
7. Case control vs. Cohort studies
8. Causation in Epidemiology
9. Causal Inference: Bias, Confounding

By the end of the course, students should be able to:

1. Explain the importance of epidemiology and its rubrics in informing public health issues
2. Describe and calculate common measures of morbidity and mortality
3. Identify and evaluate key sources of epidemiological data
4. Describe the magnitude of public health problems by person, time and place
5. Understand the conduct, design and analysis of common observational epidemiological study designs (cross-sectional, cohort and case-control studies)

6. Describe and calculate common epidemiologic effect measures (odds ratio, risk ratios and rate ratios)
7. Draw appropriate causal inferences from epidemiologic data by understanding the role of various biases (selection, information, confounding) and effect modification
8. Understand the need to apply ethical principles in all stages of epidemiological research

Assigned book
Gordis L. Epidemiology. Philadelphia: Pennsylvania, WB Saunders Co.; 2008 4th edition.

Structure
The course consists of a series of lectures covering 9 topics, and complementary 'application/discussion' sessions. For sessions that include critical reading of published articles, the articles will be uploaded on Moodle a week prior to their application. The students are expected to read the paper beforehand. All assignments should be turned in as a hardcopy.

Student Evaluation

		Meets objectives
Midterm Exam	45%	1-5
Final Exam	50%	6-9
Class participation	5%	

Students are expected to take the examinations on the agreed upon scheduled date and time. Make up examinations are not allowed except under very unusual and convincing circumstances. Students who fail to take the examinations on the scheduled date without a written permission of the coordinator will receive a grade of F on the examination.

Students are expected to attend all assigned lab sessions and to successfully complete all lab assignments. Failure to do so will be reflected in the overall course evaluation.

Cheating and Plagiarism
Cheating and plagiarism will not be tolerated. Review the Student Code of Conduct in your handbook and familiarize yourself with definitions and penalties. If you're in doubt about what constitutes plagiarism, ask your instructor because it is *your* responsibility to know. The American University of Beirut has a strict anti-cheating policy. Penalties include failing marks on the assignment in question, suspension or expulsion from University and a permanent mention of the disciplinary action in the student's records.

Absenteeism
Students who miss more than one-fifth of the sessions of any course in the first ten weeks of the semester are dropped from the course.

AMERICAN UNIVERSITY OF BEIRUT
HARIRI SCHOOL FO NURSING

Minutes of the Town Meeting of MSN Students

November 28, 2018

Time and place: The meeting came to order at 1 pm in Room 103, Hariri School of Nursing Building.

Present:
Faculty: Dr. Samar Noureddine (chair); Mrs. M. Arevian, Drs. H. Darwish, N. Dumit, L. Farhood, G. Honein, H. Puzantian.
Students: H. Amad, A. Artinian, S. Atwi, M. A. Bdeir, F. Dirani, R. Itani, B. Mousa, M. Taha, A. Wehbi.

Order of Business:

1. Faculty announcements:

- **Introductions**: Faculty members and students present introduced themselves. Dr. Noureddine introduced what the town meeting is for, namely to discuss how the program is going and if students have any concerns, especially first year students.

- **Deadlines:** Students were urged to check the registrar's calendar of deadlines for when to come for advising, register courses, pay their fees, drop and add, withdraw from courses, etc.

- **Communication with Faculty members:** Students are urged to talk to their advisors regarding registration. Students can also consult with the MSN track coordinators if there any questions, especially if students are undecided on what track to choose. Student are advised to book an appointment with their advisor to discuss their curriculum plan and get their registration pin number, rather than asking for the pin number over the phone.

- **Thesis/project:** Students were advised to plan ahead and take into account the timetable of the faculty as well. If students decide and expect to finish at a certain time, they must make sure to communicate that with their thesis/project advisor, so they can adjust their schedule for it and the timing would be convenient to all. Students need to be organized, put deadlines and timetables for their work and send it to the advisor to ensure that there is at least 2 weeks time window for the faculty to provide feedback on the student's work.

- **Advice from faculty members about MSN student work:** Faculty members advised students to work/continue working while in the MSN program so they can take what they learned in class to work and bring it to class what they do at work, in order to reflect and connect education with practice.

2. Student Concerns:

- **Master Card Foundation (MCF) Scholarships:** MCF scholarships only cover 2 years of study since it is geared for full time students. Given that the 2 continuing students who are MCF scholars are in the MSN clinical tracks, they will not be able to complete their degree requirements in 2 years, but would require one extra semester. Dr. Noureddine communicated with the MCF coordinator regarding extending coverage one more semester and it was approved. An email by the Hariri School of Nursing will be sent to support the MCF scholar students.

- **When to plan for the MSN residency?** Preparation for residency will take place one semester before the semester during which the residency will be done to make sure everything is ready for the students to start, especially if they plan to do their residency abroad. Students can complete their residency either in the summer or early fall. Timers and placements are coordinated on individual basis

- **What is the procedure for student membership in the Chi Iota Chapter of Sigma Theta Tau International?** MSN students are screened for eligibility to be graduate student members of Chi Iota during the spring semester by graduate faculty then candidates are communicated by the Division convener to the governance committee of the Chapter who recommends them to the Chi Iota Chapter Board. Eligibility criteria include academic performance including GPA and the number of credits completed.

- **Can the schedule of the NURS 502 class be changed?** The class is only one hour on Tuesdays. Students who work 12-hour shift expressed difficulty to take one whole day off work to attend the class. The faculty replied that it would be difficult to change the timing of the class, considering the schedule of other classes.

3. Adjournment:

The meeting concluded at 1:45 pm

Sally Atwi, MSN student
Recorder

Exhibit I.14: Sample Town Hall Meeting Minutes with students

AMERICAN UNIVERSITY OF BEIRUT
HARIRI SCHOOL OF NURSING

MINUTES OF THE TOWN MEETING WITH MSN STUDENTS

Time and Place: November 30, 2020 at 2:00 pm, through Webex

Presiding: Dr. Samar Noureddine, graduate program convener

Members Present: Dean Laila Farhood, Drs. Hala Darwish, Dr. Nuha Dumit, Souha Fares, Gladys Honein, Houry Puzantian, Dr. Younan , Ms. Lynn Berbary

Students Attendance: Nour Abdallah, Ahmad Al Jammal, Ahmed Rufai Yahaya, Mosunmula Abina, Mohamad Ali Bdeir, Rasha Darwish, Nourhan Al Shami Bayrakdar, Marie Joe Fahmi, Shereen Omar, Fatima Al Dirani, Adnan Kreik, Farah Farroukh , Sally Atwi

Order of Business:

1. **Introduction**

Dr. Noureddine welcomed the students and the graduate faculty, noting that that aim of this meeting is to allow students to share their questions/concerns.

2. **Students concerns:**

I- <u>Online teaching</u>

Students raised concerns about the next semester online teaching

- Dean Farhood confirmed that according to the last Board of Deans meeting, teaching during the Spring semester 2020-21 will start online. Later in the semester, if the situation allows, teaching will be face to face. For the time being, it is online.
- For students who live abroad, Dr. Noureddine confirmed that the course teaching will remain online. In case of any on-site sessions later in the semester, all will be recorded.
- Dean Farhood confirmed that in case a student or two registered in a course and are outside the country, the plan is to accommodate them, especially those having connections/ electricity difficulties. Dr. Noureddine confirmed that arrangements will be made depending on the COVID-19 situation.
- International students will be able to follow up on online classes, even those facing connection troubles.

II- <u>Registration and project/thesis matters:</u>

Dr. Noureddine went over the below points with the students:

- Students who plan to take the comprehensive exam during the next spring 2020-21 must register for it by December 11, 2020, or during the Drop and Add period.
- Dr. Noureddine went over the structure of the comp. exam, and what the students need to go over and review.
- The thesis research process: Dr. Noureddine confirmed that we need to follow up with the IRB, depending on the COVID-19, since guidelines regarding the type of data collection allowed keep changing. Therefore, we should wait and according on what happens act accordingly. As for international students, there is no issue collecting data in Lebanon if the situation allows.
- Students should register their project/thesis in the semester following passing the comp exam. Students can start planning ahead of time, and check with their advisers to decide their proposal idea.

III- AUB tuition fee and dollar rate

Several students raised their concerns about next semester's official dollar rate. Dean Farhood expressed how unfortunate the situation is with the students, mentioning that AUB is facing a big economic crisis. The Dean went over the below:

- AUB Official rate in the spring 2020-21 will be: 3900 LBP per 1 USD.
- There will be town halls with faculty, staff and students, to inform everyone about the financial situation that AUB is facing.
- The new rate will apply for all new and continuing students.
- More financial aid will be provided for those who need it.
- No particular decision was taken regarding graduate student financial assistance.
- HSON administration will try to follow up with the Office of Financial Aid, and the Office of Development to check financial assistance.
- Graduate students can still apply for Graduate Assistantship.
- Good advantage that students who work at AUBMC are still receiving financial 60/40 assistance from AUBMC.
- The deferred payments option are only for undergraduate students, not for graduate students.
- GFA decisions will be based on the school need, whether it is in teaching or research.
- Students should move fast in their registration if they want to request GA.

IV- Request of having the Couches back in HSON lobby

- Students requested having the couches back in HSON lobby back. Dean Farhood has always encouraged the students to come on campus and enjoy students' life; however, due to the COVID-19 restrictions, nobody is allowed to access the campus without a special permission. Dr. Honein, HSON representative on the COVID-19 expert committee, confirmed that having the

couches back is not a priority now, and will be considered later depending on the COVID-19 situation.

V- Adjournment:

The town hall meeting wa adjourned at 2:45 PM.

Recorder
Nisrine Ghalayini, Administrative Assistant
